Module D

OUTBREAKS AND SAFE INJECTION PRACTICES IN OUTPATIENT SETTINGS

Statewide Program for Infection Control and Epidemiology (SPICE)
UNC School of Medicine

OBJECTIVES

1. Discuss the consequences of unsafe injection practices
2. Describe outbreaks
3. Discuss safe injection best practices
4. Describe One and Only Campaign

UNSAFE INJECTION PRACTICES CONSEQUENCES

VIRAL HEPATITIS OUTBREAKS REPORTED TO CDC 2008-2017

KNOWLEDGE CHECK

Which of the following statements is correct?

1. CDC reports that most outbreaks occur in the hospital
2. Outbreaks of HIV are the most common type of outbreak
3. CDC reports that most outbreaks occur in non-hospital settings and are associated with unsafe injection practices and assisted blood glucose monitoring
WHY DO OUTBREAKS HAPPEN

1. Syringe re-use, directly or indirectly
2. Inappropriate use of single dose or single use vials
3. Failure to use aseptic technique (contamination of injection equipment)
4. Unsafe diabetes care/assisted blood glucose monitoring (ABGM)

THE BIG FOUR

SYRINGE RE‐USE

• Most common cause of outbreaks in the outpatient setting is inappropriate use of syringes:
  • Direct reuse:
    • Using the same syringe to administer medication to more than one patient, even if the needle is changed or the injection was administered through an intervening length of tubing
  • Indirect reuse or “double dipping”:
    • Accessing a medication vial or bag with a syringe that has already been used to administer medication to a patient, then reusing the contents from the vial or bag for another patient

SYRINGE RE‐USE

Video Clip: Start the video by clicking on the image below.

ENDOSCOPY CENTER, NEVADA (2008)

• 9 clinic‐associated hepatitis C virus cases
• 106 possible clinic‐associated cases
• 63,000 potential exposures
• $16–21 million total cost

DANGEROUS MISPERCEPTIONS

1. Changing the needle makes a syringe safe for reuse.
2. Syringes can be reused as long as an injection is administered through an intervening length of IV tubing.
3. If you don’t see blood in the IV tubing or syringe, it means that those supplies are safe for reuse.

Once they are used, both the needle and syringe are contaminated and must be discarded!
INAPPROPRIATE USE OF SINGLE-DOSE/SINGLE-USE VIALS

- Vials labeled as single use:
  - NO PRESERVATIVE
  - Can be accessed one time only and for one patient only and remaining contents must be discarded
- CDC is aware of at least 19 outbreaks involving single dose vial use
  - All occurred in outpatient setting with almost half in pain remediation clinics

SINGLE DOSE VIALS: CDC POSITION STATEMENT, 2012

- Vials labeled by the manufacturer as “single dose” or “single use” should only be used for a single patient.
- Ongoing outbreaks provide ample evidence that inappropriate use of single-dose/single-use vials causes patient harm.
- Leftover parenteral medications should never be pooled for later administration
  - In times of critical need, contents from unopened single dose vials can be repackaged for multiple patients in accordance with standards in United States Pharmacopeia General Chapter <797>

WHEN FAILURE TO USE ASEPTIC TECHNIQUE HAPPENS!

- Two women diagnosed with HBV infection, receiving chemotherapy at the same physician practice
- Multidisciplinary team investigation
- Office closed, physician license suspended
- 2,700 patients notified
- 29 outbreak-associated cases of HBV

NEW JERSEY – ONCOLOGY OFFICE

IV bags used as sources of fluid to flush catheters for multiple patients
IV bags with stoppers removed
Blood contamination
Reused Vacutainer holders in contact with gauze
**KNOWLEDGE CHECK**

Which of the following statements is false?

1. Syringes can be used on more than one patient if the needle is changed.
2. Single dose vials can be used more than one time if it has not been contaminated.
3. Blood glucose meters do not have contact with patients and do not need to be cleaned.
4. If there is no visible blood the syringe is safe to reuse.
5. All of the above.

---

**SAFE INJECTIONS: BEST PRACTICES**

**Syringe reuse (direct and indirect)**

- Never administer medications from the same syringe to multiple patients.
- Do not reuse a syringe to enter a medication vial or solution.
- Limit the use of multi-dose vials and dedicate them to a single patient whenever possible.

**Misuse of single-dose/single-use vials**

- Do not administer medications from a single dose vial or IV solution bag to more than one patient, more than one time.

---

**SAFE INJECTIONS: BEST PRACTICES**

**Failure to use aseptic technique**

- Use aseptic technique when preparing or administering medications.

**Unsafe diabetes care**

- Use insulin pens and lancing devices for only one patient.
- Dedicate glucometers to a single patient. If they MUST be shared, clean and disinfect after each use.

---

**MOST OUTBREAKS ARE NEVER DETECTED**

- Asymptomatic infection
- Under-reporting of cases
- Long incubation period: difficult to identify single healthcare exposure
- Under-recognition of healthcare as risk
- Barriers to investigation, resource constraints

---

**SURVEY OF PHYSICIAN AND NURSE PRACTICES AROUND INJECTION SAFETY**

- 370 Physicians
- 320 Nurses
- Eight States Included: NC, NY, NJ, Nevada, Colorado, Tennessee, Wisconsin, Montana
- Types of healthcare settings:
  - Acute care, long term care, outpatient settings

**SURVEY FINDINGS**

<table>
<thead>
<tr>
<th>Topic</th>
<th>Physician Response</th>
<th>Nurse Response</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reuse of syringe for &gt; one patient</td>
<td>12.4%</td>
<td>3.4%</td>
</tr>
<tr>
<td>Reentering a vial with a used needle/syringe</td>
<td>12.7%</td>
<td>6.7%</td>
</tr>
<tr>
<td>Using SDVs for multiple patients</td>
<td>34%</td>
<td>16.9%</td>
</tr>
<tr>
<td>Using source bags as diluent for multiple patients</td>
<td>28.9%</td>
<td>13.1%</td>
</tr>
</tbody>
</table>

**KNOWLEDGE CHECK**

**True or False**

Because there have been so many outbreaks, ALL healthcare providers do the right thing every time with safe injection practices.

- **True**
- **False**

**BEST PRACTICE**

- Designate someone to provide ongoing oversight
- Develop written infection control policies
- Provide training
- Conduct quality assurance assessments

**ONE AND ONLY CAMPAIGN**

- Print Materials
- Audio & Visual
- Social Media
- Toolkits

**CAMPAIGN RESOURCES**

- North Carolina
