

RECOMMENDED PRACTICES TO INTERRUPT TRANSMISSION OF INFECTIOUS AGENTS IN LONG-TERM CARE FACILITIES

Evelyn Cook, RN, CIC Associate Director

OBJECTIVES

- ▶ Review CDC Guidance Documents
- ▶ Review Standard and Transmission-based Precautions-SPICE signage
- ▶ Discuss Precautions specific to SARS-CoV-2 (COVID-19)
- ▶ Discuss Management of Multi-drug Resistant Organisms (MDROs)
 - ▶ Discuss Enhanced Barrier Precautions

GUIDANCE DOCUMENTS

- ▶ 2007 Guideline for Isolation Precautions: Preventing Transmission of Infectious Agents in Healthcare Settings
- ► Management of Multi-drug resistant organisms (2006)
- ► Interim Infection Prevention and Control Recommendations for Healthcare Personnel During the Coronavirus Disease 2019 (COVID-19) Pandemic
- ▶ Discontinuation of Transmission-Based Precautions and Disposition of residents with COVID-19 in Healthcare Settings (Interim Guidance)
- ▶ Interim Infection Prevention and Control Recommendations to Prevent SARS-CoV-2 Spread in **Nursing Homes**

KEY CONCEPTS

- ▶ Risk of transmission of infectious agents occurs in all settings
- ▶ Infections are transmitted from resident-to-resident via HCPs hands or medical equipment/devices

► Isolation precautions are only part of a comprehensive IP program

FUNDAMENTAL ELEMENTS -

- ► Administrative support
- ► Adequate Infection Prevention staffing
- ▶ Good communication with clinical microbiology lab and environmental services
- ▶ A comprehensive educational program for HCPs, residents, and visitors
- ▶ Infrastructure support for surveillance, outbreak tracking, and data management

CONTROLLING TRANSMISSION OF INFECTION

If there is a means of transmission, infection will spread to others.

> Standard Precautions **Transmission-Based Precautions**

STANDARD PRECAUTIONS

2007 Guideline for Isolation Precautions: Preventing Transmission of Infectious Agents in Healthcare Settings

Jane D. Siegel, MD; Emily Rhinehart, RN MPH CIC; Marguerite Jackson, PhD; Linda Chiarello, RN MS; the Healthcare Infection Control Practices Advisory Committee

Acknowledgement: The authors and HICPAC gratefully acknowledge Dr. Larry Strausbaugh for his many contributions and valued guidance in the preparation of this guideline.

Suggested citation: Siegel JD, Rhinehart E, Jackson M, Chiarello L, and the Healthcare Infect Control Practices Advisory Committee, 2007 Guideline for Isolation Precautions: Preventing Transmission of Infectious Agents in Healthcare Settings Implementation of
Standard Precautions
constitutes the primary
strategy for the
prevention of
healthcare-associated
transmission of
infectious agents
among residents and
healthcare personnel

HAND HYGIENE

▶ After touching blood, body fluids, secretions, excretions, contaminated items; immediately after removing gloves; between resident contacts.

> When hands are visibly dirty or contaminated with proteinaceous material or are visibly soiled with blood or other body fluids, wash hands with either a nonantimicrobial soap and water or an antimicrobial soap and water

ALCOHOL BASED HAND RUB

- ➤ Put alcohol-based hand sanitizer with <u>60-95%</u> alcohol in every resident room (ideally both inside and outside of the room) and other resident care and common areas (e.g., outside dining hall, in therapy gym).
- Unless hands are visibly soiled, an alcohol-based hand sanitizer is preferred over soap and water in most clinical situations.

HAND HYGIENE PROGRAM

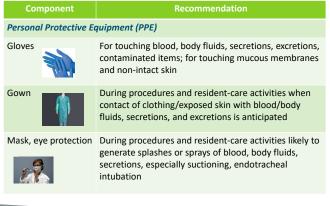

ADDITIONAL ELEMENTS

CDC GUIDELINE FOR HAND HYGIENE IN HEALTHCARE SETTING

- Involve staff in evaluation and selection of hand hygiene products
- ▶ Provide employees with hand lotions/creams compatible with soap and/or ABHRs
- ▶ Do not wear artificial nails when providing direct clinical care
- ▶ Provide hand hygiene education to staff
- ► Monitor staff adherence to recommended HH practices

STANDARD PRECAUTIONS

USE OF PERSONAL PROTECTIVE EQUIPMENT (PPE)

- ▶ Perform and maintain an inventory of PPE monitor daily PPE use (PPE burn rate calculator)
- ▶ Make necessary PPE available where resident care is provided
- ▶ Position trash can near the exit inside the room for disposal
- ▶ Implement strategies to optimize current PPE supply - even before shortages occur

USE OF PERSONAL PROTECTIVE EQUIPMENT

- >Three overriding principals related to personal protective equipment (PPE)
 - > Wear PPE when the nature of the anticipated resident interaction indicates that contact with blood or body fluids may
 - > Prevent contamination of clothing and skin during the process of removing PPE
 - > Before leaving the resident's room, remove and discard PPE -respirators removed after leaving

UNIVERSAL SOURCE CONTROL (NOT PPE)

- ▶ Residents/family members wear their own well-fitting form of source control upon arrival and through out their stay
- ▶ Residents may remove while in their rooms but wear when around others or leaving their room
- ► Healthcare personnel should **ALWAYS** wear well-fitting source control while they are in the facility, including breakrooms or other spaces where they might encounter co-workers

https://www.cdc.gov/coronavirus/2019-ncov/prevent-getting-sick/about-face-coverings.html

How NOT to wear a mask

UNIVERSAL USE OF <u>PERSONAL PROTECTIVE</u> EQUIPMENT

Understanding the Difference

HCP working in facilities in communities with substantial to high

- N95 used for aerosol generating procedures (AGP)
- Source control
 - ▶ N95
 - A well-fitting facemask (e.g., selection of a facemask with a nose wire to help the facemask conform to the face; selection of a facemask with ties rather than ear loops; use of a mask fitter; tying the facemask's ear loops and tucking in the side pleats; fastening the facemask's ear loops pehind the wearer's headexternal icon; use of a cloth mask over the facemask to help it conform to the wearer's face.
- ► Eye protection for resident/resident encounters

RESPIRATORS

- ▶ Healthcare providers who are in close contact with an LTCF resident with suspected or confirmed SARS-CoV-2 infection <u>must use a NIOSH-approved N95 FFR or equivalent or higher-level respirator (29 CFR 1910.134)</u>
 - This guidance is designed specifically for nursing homes, <u>assisted living facilities</u> and other LTCF (group homes with nursing care)
- Whenever respirators are required, employers must implement a written, worksite-specific respiratory protection program (RPP), including medical evaluation, fit testing, training, and other elements, as specified in OSHA's Respiratory Protection standard (29 CFR 1910.134).

https://www.osna.gov/sites/default/files/respiratory-protection-covid19-long-term-care.pdf https://www.osna.gov/sites/default/files/respiratory-protection-covid19-compliance.pdf

SAFE WORK PRACTICES (PPE USE)

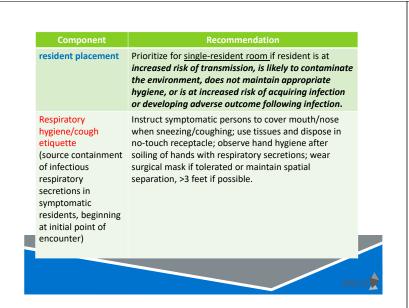

- ✓ Keep hands away from face
- ✓ Work from clean to dirty
- ✓ Limit surfaces touched
- Change when torn or heavily contaminated
- ✓ Perform hand hygiene

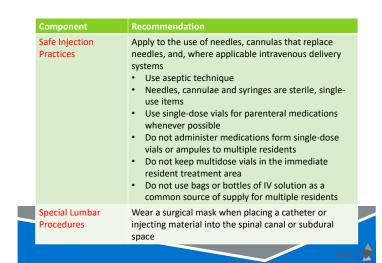

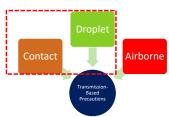

Component	Recommendation
Soiled equipment	Handle in a manner that prevents transfer of microorganisms to others and to the environment; wear gloves if visibly contaminated; perform hand hygiene
Environmental Control	Develop procedures for routine care, cleaning, and disinfection of environmental surfaces, especially frequently touched surfaces in resident-care areas
Laundry	Handle in a manner that prevents transfer of microorganisms to others and to the environment
Needles and sharps	Do not recap, bend, break, or hand-manipulate used needles; if recapping is required, use a one-handed scoop technique only; use safety features when available; place used sharps in puncture-resistant container
resident Resuscitation	Use mouthpiece, resuscitation bag, other ventilation devices to prevent contact with mouth and oral secretions

TRANSMISSION BASED PRECAUTIONS

Transmission-Based Precautions are for residents who are known or suspected to be infected or colonized with infectious agents, including certain epidemiologically important pathogens, and are used when the route(s) of transmission are not completely interrupted using Standard Precautions alone.

CONTACT PRECAUTIONS

- ▶ Common conditions:
 - MRSA,
 - ▶ VRE,
 - ► CRE,
 - ► ESBL-GNR,
 - Candida auris,
 - Scabies,
 - Uncontained draining wounds or abscesses
- ▶ Private room if available
- ►Don gown and gloves
- Disposable or dedicated equipment
- ► Transport residents in a fresh gown

ENTERIC PRECAUTIONS

- ▶ Common conditions:
 - Clostridioides difficile,
 - Norovirus,
 - ► Rotovirus
- ► USE ABHR for routine care.
- During an outbreak, HCP should consider using soap & water routinely
- Private room if possible
- ► Gown and gloves
- Disposable or dedicated equipment
- ► Use EPA agent from the K list of disinfectants: Dilute Bleach, sporicidal disinfectants.

CDC added eye protection during flu season

- ▶ Common conditions:
 - Pertussis,
 - ► Influenza,
 - ► Rhinovirus,
 - ► Neisseria meningitides,
 - Mumps,
 - Rubella,
 - Parvovirus B19
- ► Surgical or procedure mask upon entering the room
- ▶ Private room when available
- ▶ Transport resident in a medical grade mask.

https://www.cdc.gov/flu/professionals/diagnosis/testing-management-considerations-

AIRBORNE PRECAUTIONS

- > Common conditions:
 - > Tuberculosis,
 - Measles

Private room only

Room requires Negative airflow pressure

Doors must remain closed

Everyone must wear an N-95 respirator

Limit the movement and transport of the Resident

Hand hygiene before and after

TUBERCULOSIS

Facility does not have a dedicated negative pressure room:

- ▶ Transfer resident to a facility capable of managing and evaluating resident
- ▶ Be sure policy is included in your plan

Facility does have negative pressure room:

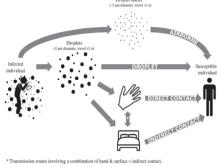

► Follow Airborne Precautions

TRANSMISSION-BASED PRECAUTIONS

- Combinations of precautions may be necessary based on the pathogen:
 - ► Contact plus Droplet
 - ► Contact plus Airborne

1Proceianoy RS, et al. J Pediatr (Rio J) 2002;11 April; 2 Almendros A, et al. Vet Rec 2020;4; 3Chin AWH, et al David Weber: Associate Chief Medical Officer, UNC Hospitals; Medical Director, Hospital Epidemiology: COVID-19 (SARS Co-V-2) Update

AIRBORNE CONTACT PRECAUTIONS

- ▶ Common conditions:
 - ► Chicken Pox
 - ► Disseminated Shingles
 - ▶ Smallpox
 - ► Monkey pox
 - Extrapulmonary tuberculosis (draining lesions)
- ► AIIR- single-resident room with special air handling and ventilation capacity that meet the Facility Guidelines Institute (FGI) standards.
- ▶ N95 or higher respirator
- ► Essential transport only with resident-resident wearing a medical grade mask
- ► Upon discharge allow at least one hour for air to circulate

CHICKENPOX AND SHINGLES

Disease/Condition	Type and Duration of Isolation
Chickenpox (varicella)	Airborne and Contact until lesions are dry and crusted
Shingles (Herpes zo	ster. Varicella zoster)
Localize in resident with intact immune system with lesions that can be contained/covered	Standard Precautions
Disseminated disease in any resident	Airborne and Contact precautions for duration of illness
Localized disease in immunocompromised resident until disseminated infection ruled out	Airborne and Contact precautions for duration of illness

Non-immune healthcare personnel should not care for residents with Chickenpox or Shingles

DROPLET CONTACT PRECAUTIONS

- ► Common conditions:
 - Rhinovirus if associated with copious secretions,
 - Invasive group A streptococcal infection associated with soft tissue involvement
 - ► Certain coronaviruses
 - RSV (infants and young children)
- ▶ Private room when available or keep >3 spatial separation
- ► Surgical or procedure mask when entering room
- ► Gown and gloves on room entry and remove when leaving room
- ► Essential transport with resident/resident in a medical grade mask and clean gown

SPECIAL DROPLET CONTACT PRECAUTIONS

- ► Common conditions:
 - ► SARS.
 - ► SAR-CoV-2 (COVID-19)
- Private room with door closed unless fall risk.
- ► AIIR- single-resident room with special air handling and ventilation capacity that meet the Facility Guidelines Institute (FGI) standards when performing AGPS
- ► Fit tested N95 or higher respirator
- ▶ Protective eyewear
- ▶ Gown and gloves
- Essential transport only with residentresident wearing a medical grade mask

WHEN TO DISCONTINUE TBP PRECAUTIONS

- ▶ Resume Standard Precautions once high-risk exposures or active symptoms have discontinued
 - ▶ Refer to *Appendix A in the 2007 Isolation Guidelines-updated 2018*Type and Duration of Precautions Recommended for Selected Infections and Conditions¹

Guideline for Isolation Precautions: Preventing Transmission of Infectious Agents in Healthcare Settings (2007)

Appendix A Updates [September 2018]

Changes: Updates and clarifications made to the table in Appendix A: Type and Duration of Precautions Recommended for Sected Infections and Conditions.

MULTIDRUG RESISTANT ORGANISMS

- MDRO- Organisms that develop resistance to one or more classes of antibiotics. This may result in typical antibiotic regimens not working or becoming less effective.
- ▶ Cause infections and/or colonization
- ► Infections caused by MDROs are:
 - More difficult to treat
 - ► Require more toxic antibiotics to treat
 - Often have poor resident outcomes
 - ▶ Are easily transmitted in healthcare settings

RISK FACTORS FOR DEVELOPING A MDRO

- ▶ Duration of hospitalization
- High rates of transfer in and between hospitals
- ▶ Local institution risk factors
- Long term care facilities
- ▶ Intensive care units
- ▶ High rate of device utilization
- ► Colonization
- ▶ Prior antibiotic use

'Age, comorbid illnesses, invasive medical devices, frequent antibiotic exposure, fraced dependence on setting of communal living, all nursing home residents infected with healthcare, acquired bacterial pathogens."

MULTIDRUG RESISTANT ORGANISMS

- ▶ Cause infections
 - ▶ More difficult to treat
 - ▶ Require more toxic antibiotics to treat
 - Often have poor resident outcomes
 - Are easily transmitted in healthcare settings

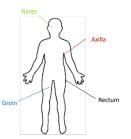

▶ Colonization

- ▶ Colonization means organisms live on or in the body without having an active
- ▶ CDC notes up to 50% of nursing home residents are colonized with MDROs.
- ▶ MDRO colonization can increase the individual's risk for developing an infection.
- ** MDRO-colonized residents serve as a source of transmission to others ***

COLONIZATION VS INFECTION

- ▶ MDRO colonization can persist for long periods of time (e.g., months) and result in silent transmission.
- Common colonization sites for MDROs include:
 - Nares
 - Axilla
 - ▶ Groin
 - Rectum

Slide Acknowledgment:-Ashley Jackson, SPICE

MDROS SPREAD IN HEALTHCARE SETTINGS

- ▶ Resident to resident transmission via healthcare provider's hands
- ▶ Environmental/equipment contamination

X marks the location where VRE was isolated in the

Image from Abstract: The risk of hand and glove contamination after contact with a VRE + resident environment. Hayden M, ICAAC, 2001, Chicago, II.

KEY MDRO PREVENTION STRATEGIES

- Assessing hand hygiene practices
- ▶ Quickly reporting MDRO lab results
- ▶ Implementing Contact Precautions
- ▶ Recognizing previously colonized residents
- ▶ Strategically place residents based on MDRO risk factors
- ▶ Careful device utilization
- ► Antibiotic stewardship
- ▶ Inter-facility communication

PRECAUTIONS IN LTCF CDC SAYS...

V.A.5.c.ii.1 "For relatively healthy residents (e.g., mainly independent) follow Standard Precautions making sure that gloves and gowns are used for contact with uncontrolled secretions, pressure ulcers, draining wound, stool incontinence, and ostomy tubes/bags."

V.A.5.c.ii.2. For ill residents (e.g., those totally dependent upon healthcare personnel for healthcare and activities of daily living...) and for those residents whose infected secretions or drainage cannot be contained, use Contact Precautions, in addition to Standard Precautions."

V.A.5.c.iii. For MDRO colonized or infected patients without draining wounds, diarrhea, or uncontrolled secretions, establish ranges of permitted ambulation, socialization, and use of common areas based on their risk to other patients and on the ability of the colonized or infected patients to observe proper hand hygiene and other recommended precautions to contain secretions and excretions.

HICPAC, Management of MDROs in healthcare settings, 2006

CONTACT PRECAUTIONS IN LTCF WHAT WE KNOW

- ▶ Contact precautions creates challenges for nursing homes trying to balance the use of PPE and room restriction with residents' quality of
- Contact precautions implemented only when residents are infected with an MDRO
- MDRO colonization can persist for long periods of time (e.g., months) and result in silent transmission
- Organisms that are pan-resistant or have novel mechanisms of resistance are emerging

Colonization VS

SPICE RECOMMENDATIONS

RESIDENT CHARACTERISTICS

Personal Protectiv	e Equipment (PPE)
Gloves	For touching blood, body fluids, secretions, excretions, contaminated items; for touching mucous membranes and non-intact skin
Gown	During procedures and resident-care activities when contact of clothing/exposed skin with blood/body fluids, secretions, and excretions is anticipated
Mask, eye protection	During procedures and resident-care activities likely to generate splashes or sprays of blood, body fluids, secretions, especially suctioning, endotracheal intubation

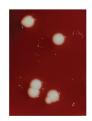

▶ Five C's

- Cognitive function (understands directions)
- ► Cooperative (willing and able to follow directions)
- ► Continent (of urine or stool)
- ▶ Contained (secretions, excretions, or wounds)
- Cleanliness (capacity for personal

Kellar M. APIC Infection Connection. Fall 2010 ed.

▶ In lower-acuity post-acute care settings (e.g., non-ventilator units of skilled nursing facilities, rehabilitation facilities), the use of Contact Precautions is more challenging and should be guided by the potential risk that residents will serve as a source for additional transmission based on their functional and clinical status and the type of care activity that is being performed.

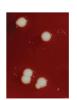

Facility Guidance for Control of Carbapenem-resistant Enterobacteriaceae (CRE): November 2015 Update-CRE Toolkit; CDC

WHAT ABOUT CARBAPENEM-RESISTANT **ENTEROBACTERALES (CRE)?**

Examples of when gowns and/or gloves might be used include the following:

- Assisting residents with toileting
- ► Changing residents' briefs
- ► Changing a wound dressing
- Manipulating resident devices (e.g., urinary catheter)

Facility Guidance for Control of Carbapenem-resistant Enterobacteriaceae (CRE): November 2015 Update-CRE Toolkit; CDC

Implementation of Personal Protective Equipment (PPE) in Nursing Homes to Prevent Spread of Novel or Targeted Multidrug-resistant Organisms (MDROs)

- ▶ "Focusing only on residents with active infection fails to address the continued risk of transmission from residents with MDRO colonization, which can persist for long periods of time (e.g., months), and result in the silent spread of MDROs".
- "With the need for an effective response to the detection." of serious antibiotic resistance threats, there is growing evidence that current implementation of Contact precautions in nursing homes is not adequate for prevention of MDRO transmission".

► What this guidance **DOES** NOT do:

- Does not replace existing guidance regarding use of contact precautions for other pathogens (e.g., Clostridioides difficile, norovirus)
- Does not provide guidance for acute care or long-term acute care (LTACs)

▶ What this guidance DOES do:

Does provide guidance for PPE use and room restriction in nursing homes for preventing transmission of <u>novel or</u> targeted MDROs, including as part of a public health containment response

spice.unc.edu/ltcwebinars

NOVEL OR TARGETED MDROS ARE DEFINED AS:

- ▶ Pan-resistant organisms:
 - ▶ Resistant to all current antibacterial agents Acinetobacter, Klebsiella pneumonia, pseudomonas aeruainosa
- Carbapenemase-producing Enterobacteriaceae
- Carbapenemase-producing Pseudomonas spp.
- ► Carbapenemase-producing Acinetobacter baumannii and
- ► Candida auris

ENHANCED BARRIER PRECAUTIONS

- ▶ Applies to *ALL* residents with *ANY of the following:*
 - Wounds and/or indwelling medical devices (e.g., central lines, urinary catheter, feeding tube, tracheostomy/ventilator) <u>REGARDLESS</u> of MDRO colonization status (when a novel or targeted MDRO has been identified on the unit)
 - Infection <u>OR</u> colonization with a novel or targeted MDRO when <u>Contact</u> <u>Precautions do not apply</u>
 - Facilities may consider applying EBP to residents infected or colonized with other epidemiologically-important MDROs based on facility policy (MRSA, VRE for example)
- Gown and gloves prior to the high contact care activity (cannot reuse gown and change between residents)
- ▶ No room restriction

ENHANCED BARRIER PRECAUTIONS

- Examples of high-contact resident care activities <u>requiring</u> gown and glove use:
 - Dressing
 - Bathing/showering
 - Transferring
 - Providing hygiene (focused on am and pm care)
 - Changing linens
 - ▶ Changing briefs or assisting with toileting
 - Device care or use; central line, urinary catheter, feeding tube, tracheostomy/ventilator
 - Wound care: any skin opening requiring a dressing

IMPLEMENTATION QUESTIONS

- ▶ How long should EBP be maintained on units with AR colonized or at-risk residents?
 - ▶ EBP was intended to be a long-term strategy for gown/glove use during care of residents to be followed for the duration of a resident's stay in a facility given the prolonged, potentially life-long risk of remaining colonized with certain AR pathogens
 - ▶ A transition back to Standard Precautions might be appropriate for residents placed in EBP solely because of the presence of a wound or indwelling medical device if/when those exposures are gone
- ► Should nursing homes apply EBP for MDROs like MRSA, VRE or ESBL?
 - ▶ The decision to use EBP for these organisms should be based on the prevalence of the MDRO in the facility/region. CDC will be working with HICPAC and nursing home partners to understand the application of EBP outside of AR Containment

AR Containment webinar series: Implementation of PPE in Nursing Homes to Prevent Spread of Novel or Targeted MDROs Nimalie D. Stone, MD, MS; September 3rd, 2019

CONTACT PRECAUTIONS

- ► Contact Precautions:
 - All residents with an <u>MDRO</u> when there is <u>acute diarrhea, draining</u> <u>wounds or other sites of secretions/excretions that cannot be</u> contained or covered
 - On units or in facilities where ongoing transmission is documented or suspected
 - ► C. difficile infection
 - Norovirus
 - Shingles when resident is immunocompromised, and vesicles cannot be covered
 - Other conditions as noted in Appendix A- Type and Duration of Precautions Recommended For Selected Infections and Conditions
- ▶ Gown and gloves upon ANY room entry
- ▶ Room restriction except for medically necessary care

RESIDENT PLACEMENT

COHORTING

- When single resident rooms are available assign priority for these rooms to individuals with known or suspected MDRO colonization or infection
- When not available, cohort residents with the <u>same MDRO</u> in the same room
- When cohorting (residents with the same MDRO) is not possible, place MDRO residents in rooms with ones who are at low risk for acquisition of MDROs and associated adverse outcomes from infection and are likely to have short length of stay

CDC: Management of MDROs in Healthcare Settings, 2006

PLACEMENT OF RESIDENTS **BASED ON RISK FACTORS**

- ► Avoid placing 2 high-risk residents together
- ▶ Safer to cohort low-risk and high-risk residents
- ▶ Don't change stable room assignments based on culture results unless it poses new risk
 - ► Long-term Roommates have already shared organisms in the past (even if you just learned about it)

NEUTROPENIC PRECAUTIONS

- ► Absolute neutrophil count (ANC) < 1500 or AMC expected to decrease to <500 over next 48 hours
- ▶ Private room if available
- ▶ Routine room cleaning
- ► Avoid raw or undercooked fruits, eggs, vegetables, or shellfish or cracked pepper
- ► No live flowers or plants
- ► No entry if ill
- ► Surgical mask if leaving room

FRONT/BACK POCKET CARD: (PRINTS A 2-PAGE DOCUMENT TO BE TRIMMED/LAMINATED)

SUMMARY

- ▶ Standard precautions are the primary strategy to interrupt transmission of infectious agents in healthcare facilities
 - ▶ HH,PPE, Respiratory Hygiene, Cleaning of Equipment and Environment
- ▶ Transmission-based precautions may also need to be implemented based on the type of infection and how it is transmitted
 - ► Contact, Droplet, Airborne and a combination of these
- ▶ CDC Guidance specific to multi-drug resistant organisms
 - ▶ 2006-Management of MDROs
 - ► Enhanced Barrier Precautions
- ▶ CDC Guidance available for emerging pathogens:
 - ► SARS-CoV-2
