TRANSMISSION-BASED PRECAUTIONS

Karen Hoffman RN, MS, CIC, FSHEA, FAPIC
NC Statewide Program for Infection Control and Epidemiology (SPICE)
UNC School of Medicine

OBJECTIVES

• Identify the chain of infection and routes of disease transmission
• Understand the history of isolation precautions guidelines and updates to the SPICE isolation precaution signage
• Recognize the effectiveness of transmission-based precautions compliance
• Describe isolation for visitors and discontinuation guidance
CHAIN OF INFECTION

RATIONALE BEHIND TRANSMISSION-BASED PRECAUTIONS
SOURCES OF INFECTION

Humans
- Patients
- Healthcare Personnel
- Visitors/household members

Environmental
- Common Vehicles
- Vectorborne

Host Factors
- Age
- Immobility
- Incontinence
- Dysphagia
- Chronic Diseases
- Poor Functional Status
- Medications
- Indwelling devices
ROUTES OF TRANSMISSION

- Direct Contact
- Indirect Contact
- Aerosol
- Droplet

DIRECT AND INDIRECT CONTACT TRANSMISSION

Direct Contact: skin to skin touching

Indirect Contact: inanimate surfaces
DROPLET AND AIRBORNE TRANSMISSION

Largest droplets fall to ground in seconds; may persist in dust, but not an important cause of infection.

Smallest droplets (<25 mm) evaporate leaving “droplet nuclei” of bacilli that can reach alveoli (e.g., TB).

Medium-sized droplets: trapped & cleared in upper airway.

HISTORY OF INFECTION CONTROL PRECAUTIONS IN THE UNITED STATES

• 1970 CDC “Isolation Techniques for use in Hospitals”, 1st Edition
• Six Categories of Isolation
• 1975 CDC “Isolation Techniques in Hospitals”, 2nd Edition, color-coded category door signs
HISTORY OF ISOLATION PRECAUTIONS

- **1983**  CDC Isolation Precautions in Hospital
  Category-based precautions (Airborne Isolation, Droplet and Contact) plus blood and body fluids precautions

- **1985**  Introduced Universal Precautions all patients considered infectious regardless of testing

- **1987**  Body Substance Isolation
  - focused on worker protection

- **1996**  CDC HICPAC Revised Isolation Guidelines
  - Introduced Standard Precautions and kept 3 categories of transmission-based precautions
2006 MANAGEMENT OF RESISTANT ORGANISMS IN HEALTHCARE SETTINGS
2007 GUIDELINE FOR ISOLATION PRECAUTIONS: PREVENTING TRANSMISSION OF INFECTIOUS AGENTS IN HEALTHCARE SETTINGS
JANE D. SIEGEL, MD; EMILY RHINEHART, RN MPH CIC; MARGUERITE JACKSON, PHD; LINDA CHIARELLO, RN MS; THE HEALTHCARE INFECTION CONTROL PRACTICES ADVISORY COMMITTEE

• Inclusion of non-hospital settings
• Re-emphasis on Standard Precautions
  • Safe injection Practices
  • Respiratory hygiene practices
  • Use of mask during spinal procedures

KEY CONCEPTS

• Risk of transmission of infectious agents occurs in all settings
• Infections are transmitted from patient-to-patient via HCPs or medical equipment/devices
• Isolation precautions are only part of a comprehensive IP program
• Unidentified patients who are colonized or infected represent risk to other patients
FUNDAMENTAL ELEMENTS

- Administrative support
- Adequate Infection Prevention staffing
- Good communication with clinical microbiology lab and environmental services
- A comprehensive educational program for HCPs, patients, and visitors
- Infrastructure support for surveillance, outbreak tracking, and data management

HISTORY OF NC SPICE STANDARDIZED SIGNAGE

In 2008, NC SPICE in collaboration with NC APIC to create a uniform color-coded signage for:
- Airborne Isolation Precautions
- Contact Precautions
- Contact Enteric Precautions
- Droplet Precautions
WHY STANDARDIZE ISOLATION PRECAUTIONS SIGNAGE?

• Transmission based precautions prevents the spread of infections between patients and to staff
• Supports healthcare facilities to implement CDC guidelines
• Variation in signage makes care more difficult and puts patients and residents at risk.
• Increase compliance and consistency by healthcare providers and visitors.
• Use of SPICE signage is voluntary.

UPDATED AND NEW NC SPICE ISOLATION PRECAUTIONS SIGNAGE

• Signage to have simple, big easy to see pictures
• Signage to minimize reading
• Signage to not send family and visitors looking for nursing staff
• Provides family education and directions for protection
• Provides easy access to information for staff
### NC STANDARDIZED ISOLATION SIGNAGE
(PUBLISHED JANUARY 2022)

10 isolation precaution categories
- Standard Precautions (coral) **NEW**
- Contact precautions (orange)
- Enteric Precautions (orange with brown)
- Droplet Precautions (green)
- Airborne Precautions (blue)
- Neutropenic Precautions (purple) **New**
- Contact Droplet Precautions (green/orange) **New**
- Special Droplet Contact Precautions (red/green orange)
- Protective Precautions (gray)
- Enhanced Barrier Precautions (teal) **New**

### STANDARD PRECAUTIONS

- **Hand hygiene**
- **Gown and glove if soiling likely**
- **Wear face covering if splashing is likely**
- **Clean and disinfecting medical equipment and devices between patients/residents**
- **Follow safe injection practices**
STANDARD PRECAUTIONS

- Preferred use of ABHR
- Follow safe infection practices:
  - Prepare injections in a clean area,
  - Disinfect the rubber septum on medication vial with alcohol before piecing,
  - Use needles or syringes for only one patient/resident this includes manufactured prefilled syringes such as insulin pens
  - Single dose vials accessed one time

UNIVERSAL RECOMMENDATIONS FOR ISOLATION PRECAUTIONS

- Hand Hygiene- ABHR preferred
- Dishes and Utensils: No special precautions
- Trash and Linen Management: No special trash or linen handling unless outside of bag visibly contaminated
- Personnel protective equipment: single use only.
- Duration of Precautions: Follow Appendix A-CDC 2007 Isolation Guidelines
- Visitation: Should not enter if feeling ill. Visitation also based on facility’s policy.
AIRBORNE PRECAUTIONS

- Common conditions: tuberculosis, measles
- N95 or higher respirator
- Direct visitors to nurse's station before entering
- Private room required
- Preferred Airborne Isolation Room (AIIR)
- Keep door closed to maintain negative pressure
- Upon discharge allow at least one hour for air to circulate
CONTACT PRECAUTIONS

- **Common conditions:**
  - MRSA, VRE, CRE, ESBL-GNR, Candida auris, Scabies, uncontained draining wounds or abscesses
  - Private room if available

- **Don gown and gloves**

- **Disposable or dedicated equipment**

- **Transport patients in a fresh gown**
DROPLET PRECAUTIONS

• Common conditions: pertussis, Influenza, Rhinovirus, Neisseria meningitides, Mumps, Rubella, Parvovirus B19

• Surgical or procedure mask upon entering the room

• Private room when available

• Transport patient in a medical grade mask.
ENTERIC PRECAUTIONS

- **Common conditions:** Clostridioides difficile, Norovirus, Rotovirus
- **USE ABHR for routine care.** During an outbreak, HCP should consider using soap & water routinely
- **Private room if possible**
- **Gown and gloves**
- **Disposable or dedicated equipment**
- **Use EPA agent from the K list of disinfectants:** Dilute Bleach, sporicidal disinfectants.
DROPLET CONTACT PRECAUTIONS

- Common conditions: Rhinovirus if associated with copious secretions, Invasive group A streptococcal infection associated with soft tissue involvement, Certain coronaviruses RSV (infants and young children)

- Private room when available or keep >3 spatial separation

- Surgical or procedure mask when entering room

- Gown and gloves on room entry and remove when leaving room

- Essential transport with patient/resident in a medical grade mask and clean gown

Additional PPE may be required per Standard Precautions. Isis posible que se requiera uso de protección personal adicional según las precauciones estándar.

Translated by LHC Health Interpreter Services

REVISED DATE: 10/30/2022
SPECIAL DROPLET CONTACT PRECAUTIONS

- Common conditions: SARS, SAR-CoV-2 (COVID-19)
- All single patient room with special air handling and ventilation capacity that meet the Facility Guidelines Institute (FGI) standards—Exception is for AGPS
- Private room with door closed unless fall risk.

- Fit tested N95 or higher respirator
- Protective eyewear
- Essential transport only with patient-resident wearing a medical grade mask
- Upon discharge allow at least one hour for air to circulate
AIRBORNE CONTACT PRECAUTIONS

- Common conditions: Chicken Pox, Disseminated Shingles, Smallpox, Monkeypox, Extrapulmonary tuberculosis (draining lesions)

- ALLR- single-patient room with special air handling and ventilation capacity that meet the Facility Guidelines Institute (FGI) standards.

- N95 or higher respirator

- Essential transport only with patient-resident wearing a medical grade mask

- Upon discharge allow at least one hour for air to circulate
ENHANCED BARRIER PRECAUTIONS (LCTFS)

- Infection or colonization with a novel or targeted MDRO when Contact Precautions don’t apply.

- Wounds and/or indwelling medical devices regardless of MDRO colonization status who reside on a unit/wing where a resident known to be infected or colonized with a novel or targeted MDRO resides.

- Wear gloves and gown for High Contact Resident Care Activities: Dressing Bathing/Showering Transferring Changing Linens Providing Hygiene Changing briefs or assisting with toileting Device care or use: central line, urinary catheter, feeding tube, tracheostomy Wound Care: any skin opening requiring a dressing
NEUTROPENIC PRECAUTIONS

- Absolute neutrophil count (ANC) < 1500 or AMC expected to decrease to <500 over next 48 hours
- Private room if available
- Routine room cleaning
- Avoid raw or undercooked fruits, eggs, vegetables, or shellfish or cracked pepper
- No live flowers or plants
- No entry if ill
- Surgical mask if leaving room
PROTECTIVE PRECAUTIONS

- Designed for (HSCT)
- Private room
- HEPA filters (99.7%)
- \(\geq 12\) AER
- Positive air pressure with monitoring
- Self-sealing room exits.

• Dust reduction cleaning
• No dried or fresh flowers or potted plants
• Do not enter if feeling unwell.
• Essential transport only wearing N95 respirator
SYNDROMIC AND EMPIRIC APPLICATION OF TRANSMISSION-BASED PRECAUTIONS

- Diagnosis requires lab confirmation
- Culture-based lab test require 2 or more days
- Precautions should be implemented while awaiting results
  - Based on clinical presentation and likely pathogen
- Reduces transmission opportunities

DO ALL MDROS REQUIRE TRANSMISSION-BASED PRECAUTIONS?

• Epidemiologic significant pathogens - MDROs judged by the IPCP, based on local, state, regional, or national recommendations to be of clinical and epidemiologic significance.

• Contact Precautions recommended in settings with evidence of ongoing transmission, acute-care settings with increased risk for transmission or wounds that cannot be contained by dressings.

• Contact state health department for guidance regarding new or emerging MDRO.

2007 CDC HICPAC Isolation-Precautions Guidelines

MDR-GNR COLONIZATION PERSISTENCE

ROLES OF ACTIVE SURVEILLANCE- TIER 2 CDC RECOMMENDATIONS

• (Tier 2 recommendations)
• Targeted surveillance of high-risk patients:
  • Useful during outbreaks and when incidence of an MDR-GNR is rising or not declining despite routine control efforts
• Point prevalence surveys during outbreaks:
  • Define reservoir and guide control efforts
  • Determine if on-going surveillance cultures needed

HOW EFFECTIVE ARE CONTACT PRECAUTIONS?

• Unknown
• Ineffective “MRSA” if adherence is poor (20-30%)
• Most data from outbreak settings
• Given extent of environmental contamination with some MDR-GNRs, barrier precautions make theoretical sense.
DOFFING AND DUFFING EFFECTIVENESS

1. Donning PPE: protocol deviation in 27% EVD; 50% CP
   Doffing PPE: protocol deviation in 100% EVD; 67% CP
   Fluorescence detected: for EVD 44% EVD; 28% CP

2. HCP contaminated almost 80% of the PPE simulations.

3. Mannequin simulated BBF with UV-fluorescent tracers

4. HCP (ICU) 39% error doffing, 36% MDRO contaminated

UPDATE ON RECOMMENDATIONS FOR PRECAUTIONS FOR VISITORS

• Use guided by specific pathogen, underlying infectious condition and endemicity of the organism in hospital and community

SHEA EXPERT GUIDANCE

Isolation Precautions for Visitors

L. Silvia Munoz-Price, MD, PhD; David B. Banach, MD, MPH, MS; Gonzalo Bearman, MD, MPH; Jane M. Gould, MD; Surbhi Lekhla, MBBS; Daniel J. Morgan, MD, MS; Tara N. Palmore, MD; Mark E. Rupp, MD; David J. Weber, MD, MPH; Timothy L. Wriemken, PhD
ISOLATION PRECAUTIONS FOR VISITORS

- All visitors comply with hand hygiene before and after visiting
- Endemic situations with MRSA and VRE
  - No Contact Precautions for visitors in routine circumstances
  - Visitors visiting multiple patients should use Contact Precautions

Infection Control & Hospital Epidemiology / FirstView Article / April 2015, pp 1 - 12

DISCONTINUING CONTACT PRECAUTIONS

- Disease specific recommendations in Appendix A of CDC Isolation-Precautions Guidelines
  - Type and duration of precautions
  - Remain in effect for limited period of time (i.e. while the risk for transmission persist or for the duration of illness)
- New SHEA Expert Guidance 2018

Ref. SHEA Duration of Contact Precautions. ICHE. 2018 by The Society for Healthcare Epidemiology of America. All rights reserved. DOI: 10.1017/ice.2017.245
DISCONTINUATION OF CP FOR MRSA

Establish policy for previously MRSA colonized or infected.

- Off antibiotics effective against MRSA ≥ 72 hrs (3 weeks for dialysis)
- Optimal number of surveillance cultures unclear
  - Optimal culture site unclear, anterior nares common

Ref. SHEA Duration of Contact Precautions. ICHE. 2018 by The Society for Healthcare Epidemiology of America. All rights reserved. DOI: 10.1017/ice.2017.245

SUMMARY

- Chain of Infection
- Routes of disease transmission
- NC SPICE revised the standardized isolation precautions signage
  https://spice.unc.edu/resources/nc-standardized-isolation-signage/
- Effectiveness of TBP
- Visitor guidance
- TBP discontinuation for MRDO
