#### Overview

- Antimicrobial resistance (AMR)
- Drivers of AMR
- Risk factors for infection with MDROs
- Superbugs and super-resistance
  - ESBL-E, CRE/CPE, CRAB, DTR
- Consequences/costs of AMR

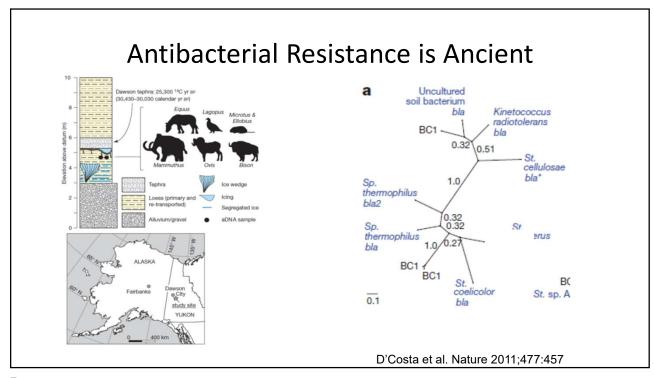

3

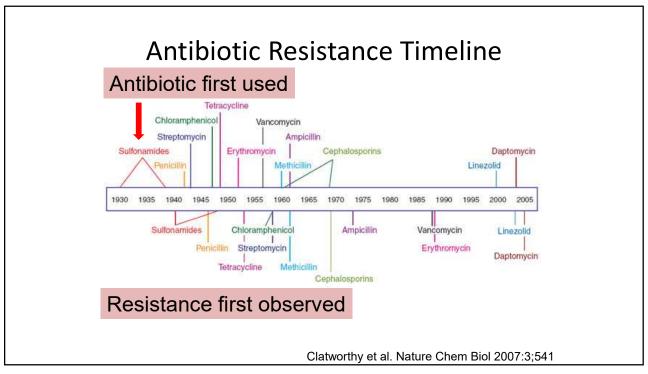

#### The Threat of Antibiotic Resistance

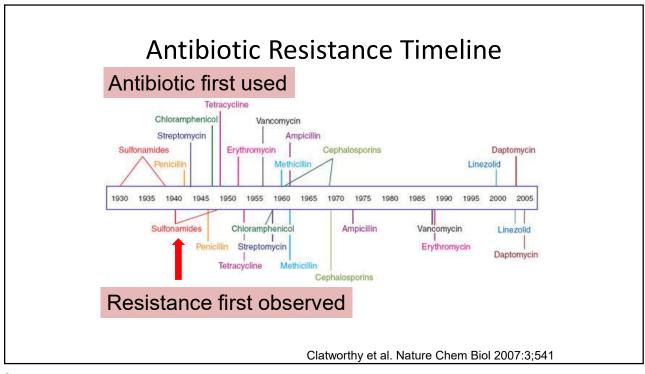

- WHO: "antibiotic resistance one of the three greatest threats to human health"
- US: annual additional costs of infections caused by resistant organisms \$21-34 billion
- Impact on all aspects of modern medicine
  - Surgery
  - Oncology
  - $\ Transplantation \\$

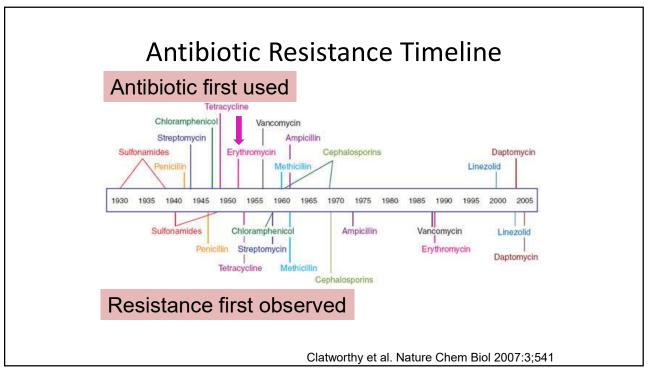

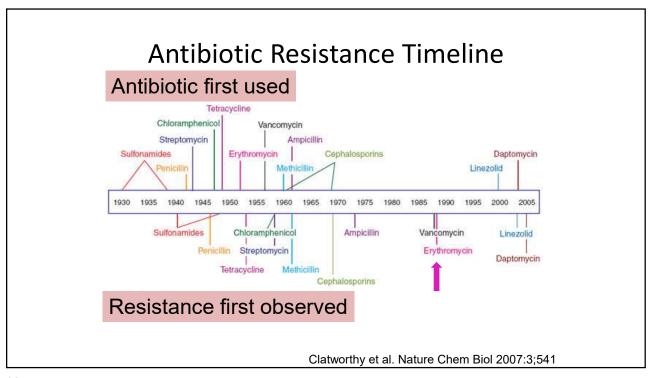

# Where did antimicrobial resistance originate from?

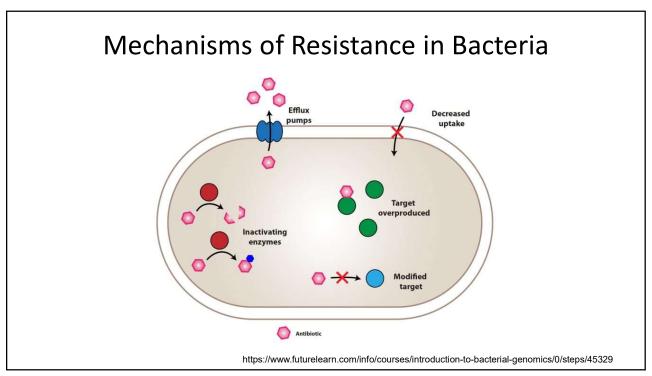

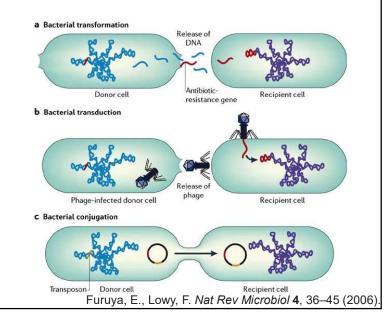

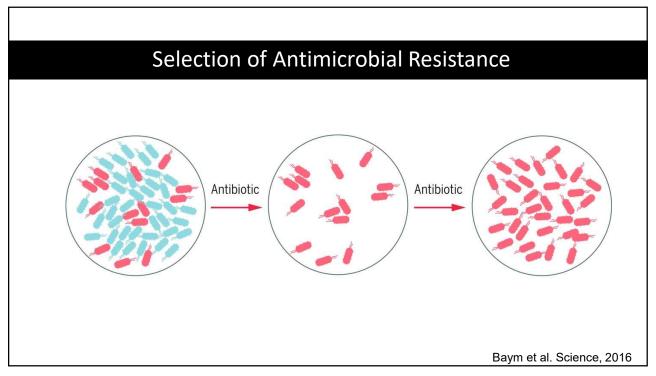

#### Mechanisms of AMR Gene Sharing in Bacteria

- 1. Transformation
- 2. Transduction
- 3. Conjugation

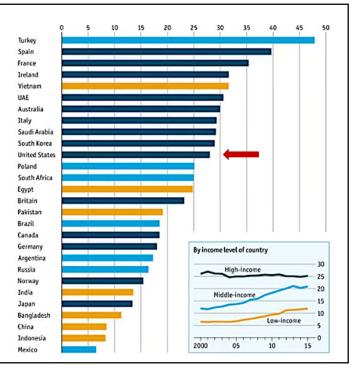

13

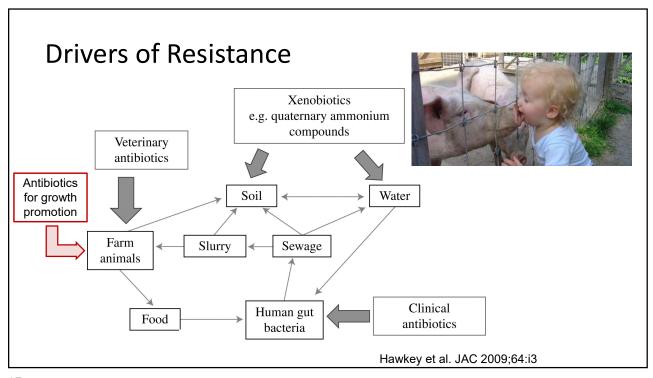

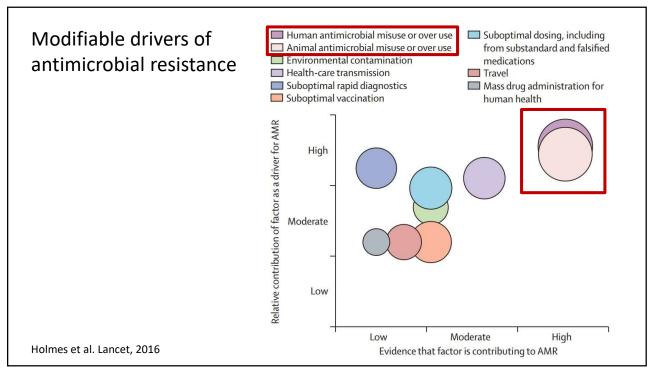

### Antibiotic Usage is High Across the World

- Defined daily dose per 1,000 inhabitants per day, 2015 data
- High-income countries have the most antibiotic use
- Largest increases are in low-income countries

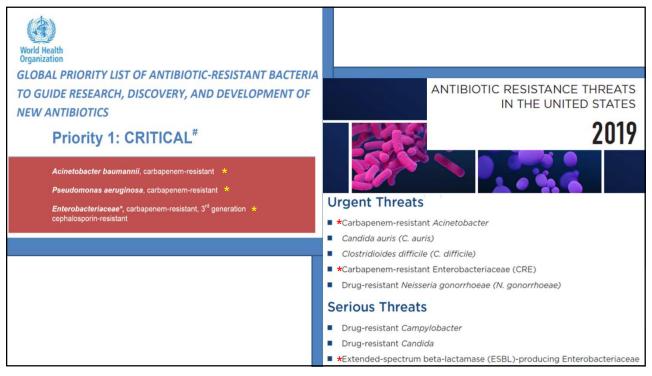

Klein et al. PNAS 2016

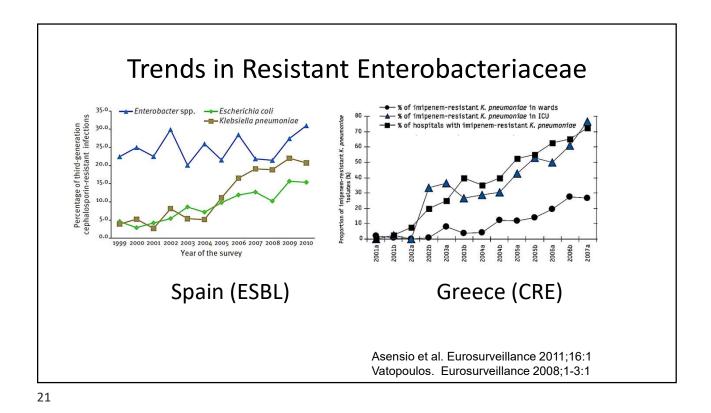

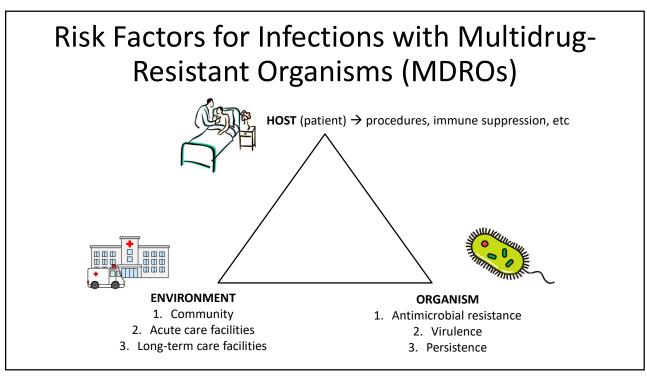

# Risk Factors for Infections with Multidrug-Resistant Organisms (MDROs)

19

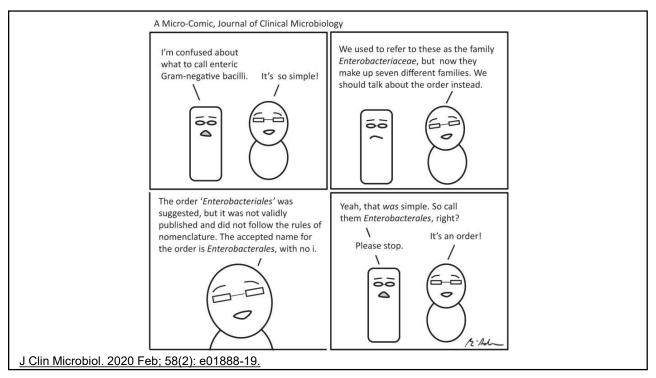

# But first some definitions...

23

#### Focus of AMR Lecture: GNRs

- Two primary types of GNRs
  - Fermenters: Enterobacteriaceae/Enterobacterales\* (gut-associated)
  - o Non-fermenters: Environment-associated organisms (water, surfaces, etc)

#### Focus of AMR Lecture: GNRs

- Two primary types of GNRs
  - o Fermenters: Enterobacteriaceae/Enterobacterales (gut-associated)
  - o Non-fermenters: Environment-associated organisms (water, surfaces, etc)
- Two primary resistance types discussed today
  - o Extended-spectrum beta-lactamases (ESBL)
    - Define by resistance to 3<sup>rd</sup>-generation cephalosporins
  - Carbapenem resistance
    - Carbapenem resistant Enterobacterales/Enterobacteriaceae (CRE)
    - Some produce carbapenemases (NDM, KPC)
      - Carbapenemase producing Enterobacterales (CPE)
    - Others result from the combination of multiple drug-resistance mechanisms

#### ESBL... What's in a Name?

#### **Genotypic** ESBL

- -presence of ESBL gene
  - Whole genome sequencing
  - Targeted PCR

#### Phenotypic "ESBL"

- -often a synonym for resistance to extended-spectrum cephalosporins (e.g. ceftriaxone)
- -sometimes other phenotypic testing
- -NOTE: remember AmpC enzymes
  - Chromosomal, inducible (e.g. *Enterobacter cloacae*) vs. plasmid-mediateu (e.g. *E. coli*)

27

ESBL Families						
Family	Nomenclature	Characteristics				
TEM	Temoneira, the patient infected with the first isolate expressing TEM-1	Point mutation variants of TEM-1 or TEM-2				
SHV	Sulfhydryl reagent variable	Point mutation variants of SHV-1				
IRT	Inhibitor-resistant TEM	TEM variants that are resistant to inhibition by clavulanate and sulbactam, but do not have ESBL phenotype				
CMT	$\underline{Complex}\underline{m}utantderivedfrom\underline{TEM-1}$	TEM variants that are resistant to inhibition by clavulanate and sulbactam and also have ESBL phenotype				
CTX-M	Cefotaxime-hydrolysing β-lactamase isolated in Munich	Derived from the chromosomal β-lactamase from Kluyvera spp. Preferentially hydrolyses cefotaxime				
GES	<u>G</u> uiana- <u>e</u> xtended <u>s</u> pectrum	More prevalent in <i>P. aeruginosa</i> than Enterobacterales Some variants also hydrolyse carbapenems				
PER	<u>P</u> seudomonas <u>e</u> xtended <u>r</u> esistant	More prevalent in $P$ . $aeruginosa$ and $A$ . $baumannii$ than Enterobacterales Inhibition by newer $\beta$ -lactamase inhibitors is variable				
VEB	$\underline{\text{V}} ietnam\underline{\text{e}}xtended\text{-spectrum}\beta\text{-lactamase}$	Preferentially hydrolyses ceftazidime and aztreonam compared with cefotaxim. Inhibition by newer $\beta$ -lactamase inhibitors is variable				
BEL	Belgium extended β-lactamase	Preferentially hydrolyses ceftazidime and aztreonam compared with cefotaxime				
TLA	Named after the <u>Tla</u> huica Indians (Mexico), from whom the first isolate was obtained	Preferentially hydrolyses ceftazidime and aztreonam compared with cefotaxim				
SFO	From <u>Serratia fo</u> nticola	Inducible				
OXY	From Klebsiella <u>oxy</u> toca	Chromosomally encoded				

#### **CDC-Defined CRE**

#### **US Centers for Disease Control and Prevention (CDC)**

- 2012 CRE definition:
  - Non-susceptible to imipenem, meropenem, OR doripenem (MIC > 1 mcg/ml), AND
  - resistant to all 3<sup>rd</sup> gen. cephalosporins tested

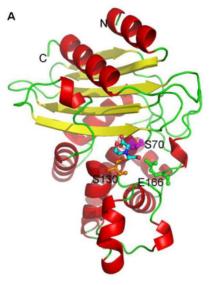

"CRE" ≠
Carbapenemase
Production (CPE)

- 2015 (current) CRE definition:
  - Resistant to imipenem, meropenem, doripenem (MIC ≥4 mcg/ml), AND/OR ertapenem (MIC ≥2 mcg/ml) AND/OR
  - Documented to produce carbapenemase

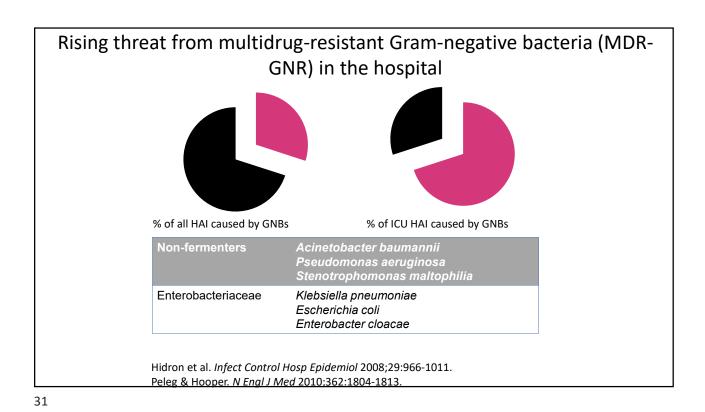

29

#### Carbapenemases

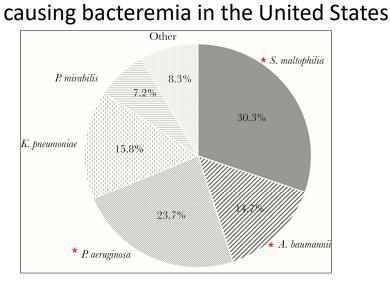

- KPC: Most common carbapenemase encountered in Enterobacterales in US
  - 13 variants; KPC-2 and KPC-3 most common
  - Class A serine-carbapenemase
  - Hydrolyzes carbapenems, cephalosporins, penicillins, aztreonam
- Other carbapenemases much less common in US
  - NDM, OXA, VIM, etc
  - Serine- and metallo-carbapenemases

Ke et al. Biochem 2007;46:5732

Carbapenem-resistant (CR), gram-negative pathogens

Open Forum Infect Dis, Volume 7, Issue 5, May 2020, ofaa141

Risk factors	&	at-risk	populatio	n
--------------	---	---------	-----------	---

	Enterobacteriaceae	Non-fermenters
Risk factors	LOS ICU stay Catheters / devices Ventilation Prior antibiotics Travel	LOS ICU stay Catheters / devices Ventilation Prior antibiotics Trauma (esp. burns)
At-risk population	Acute settings Recent travel to areas of high prevalence Potential for community spread	High-risk patients Esp in ICU and burn units Rarely community-acquired infection.

ECDC CPE risk assessment, 2011. Peleg *et al. Clin Microbiol Rev* 2008;21:538-582.

33

#### Risk factors are common across many MDR-pathogens

Risk Factors	Odds Ratio or Relative Risk (References)
--------------	--

	Methicillin-Resistant Staphylococcus aureus (11, 12, 16–26)	Vancomycin-Resistant Enterococcus (27–48)	Extended-Spectrum β-Lactamase–Producing Gram-Negative Bacilli (49–57)	Clostridium difficile (58–77)
Advanced age	1.2 to 1.3 (17, 23)	2.6 (45)	NS (49, 51, 54, 56)	1.0 to 14.1 (60, 69, 74, 77)
Underlying disease			† (51), NS (49, 56, 57)	
Renal failure	† (12, 17, 18, 22, 23, 26)	4.4 to 6.98 (35, 42)		1.71 to 6.7 (66, 76)
Hematologic cancer	† (12, 17, 23, 26), NS (22)	8.4 (33)		
Hepatic failure	† (12, 17, 23, 26)			
Severity of illness‡	1.9 (24)	2.3 to 6.1 (29, 30, 32, 47)	11.6 (53)	2.0 (63)
Interhospital transfer of a patient; patient from a nursing home	6.9 (24)	4.1 to 2.9 (32, 45)	3.6 (52)	3.1 (66)
Extended length of stay	1.7 to 17.5 (16–19, 21–23, 25, 26)	1.1 to 2.9 (28, 31–34, 38, 44)	1.1 to 9.0 (49, 50, 57)	1.3 to 3.6 (62, 67, 75)

#### Endoscope-related outbreaks

EDITORIAL

Editorials represent the opinions of the authors and JAMA and not those of the American Medical Association

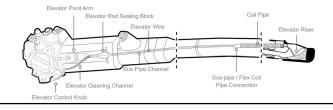

#### Gastrointestinal Endoscopes

A Need to Shift From Disinfection to Sterilization?

William A. Rutala, PhD, MPH; David J. Weber, MD, MPH

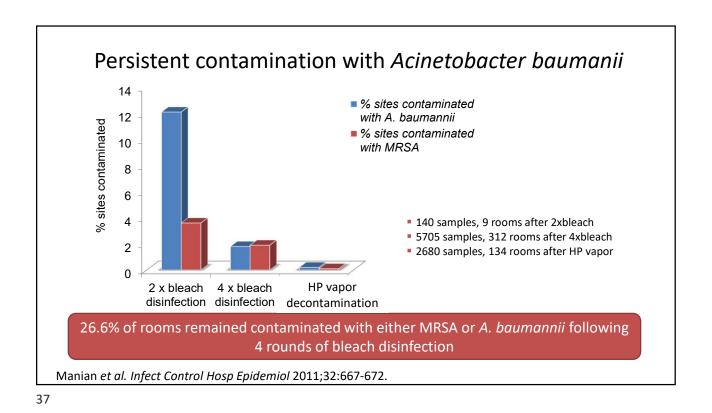

#### Several outbreaks featuring carbapenemase-producing Enterobacteriaceae

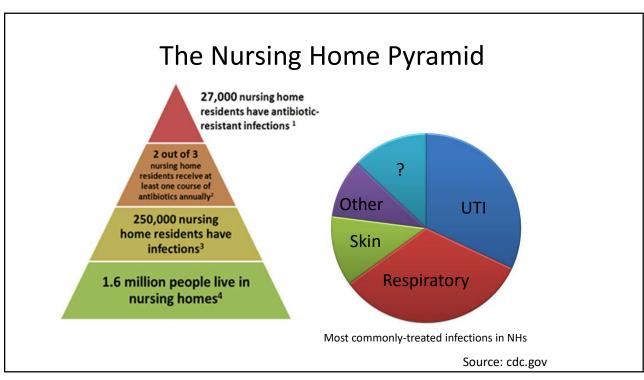

- -NDM and KPC carbapenemase genes
- -possibly related to elevator channel in scopes
- -likely "tip of the iceberg"

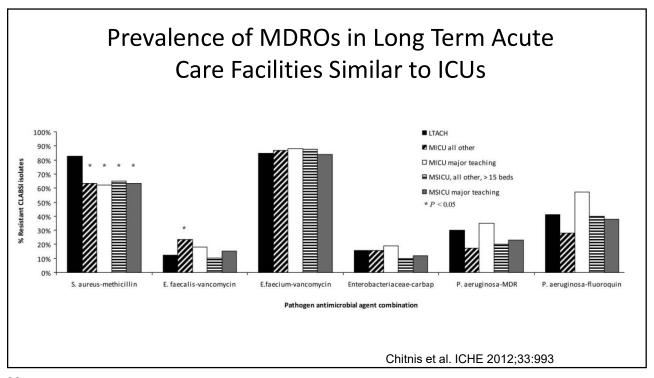

35

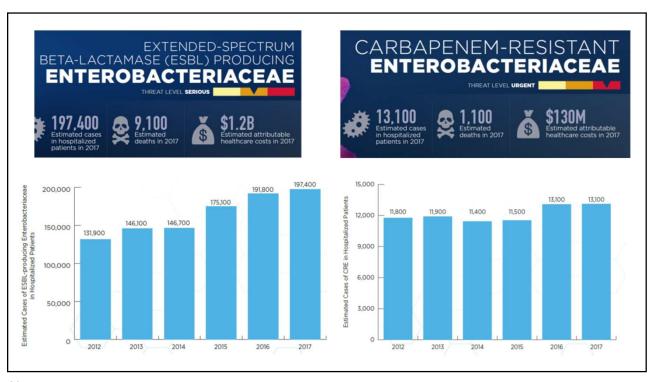

# Organisms and persistent contamination: Surface survival Organisms and persistent contamination: Surface survival C. difficile Acinetobacter K. pneumoniae Otter & French. J Clin Microbiol 2009;47:205-207.

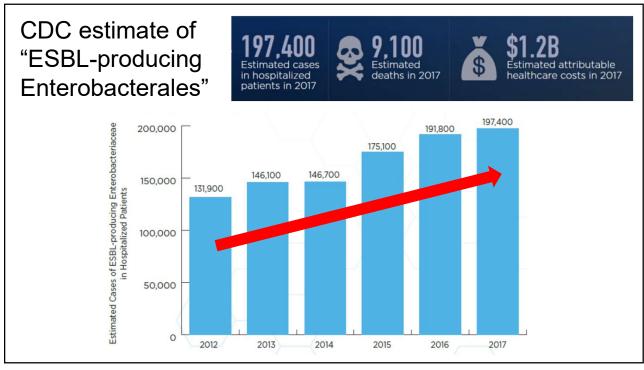

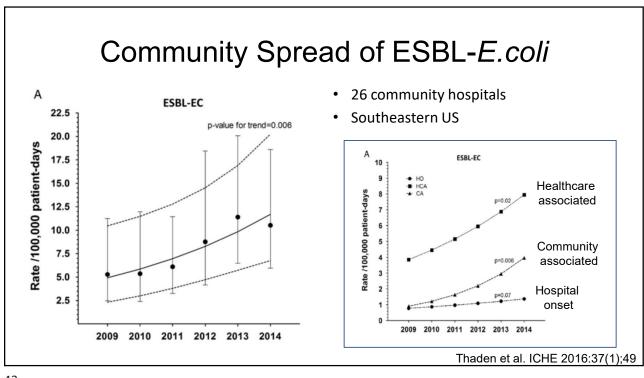

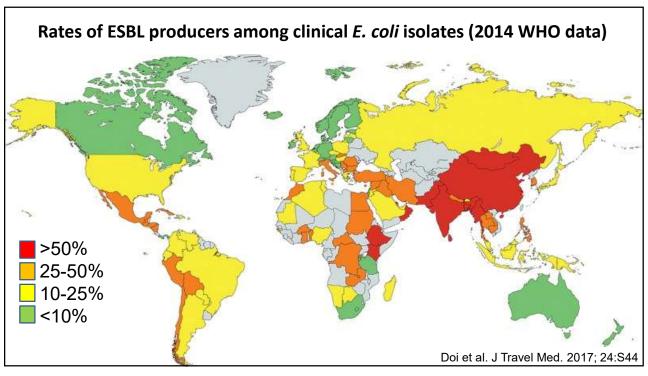

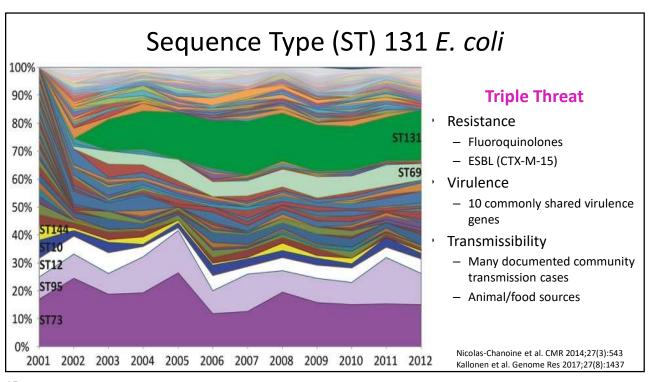

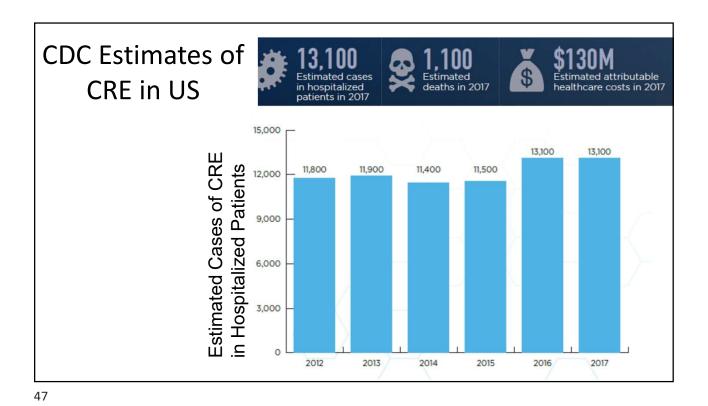

Carbapenem-Resistant Enterobacterales/Enterobacteriaceae

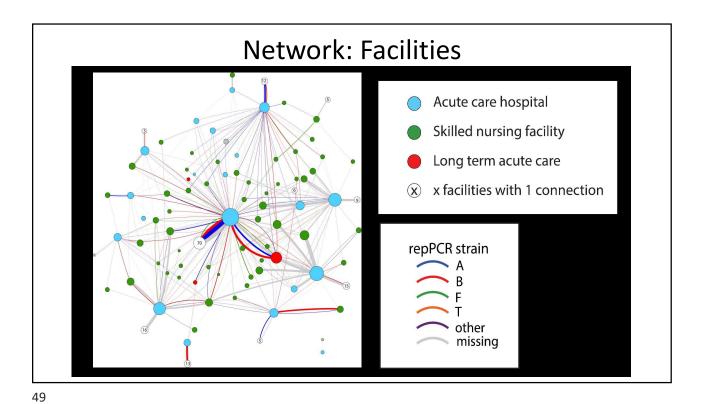

#### High Connectivity of Facilities with CRE Patients

CRACKLE-1: <u>C</u>onsortium on <u>R</u>esistance <u>Against C</u>arbapenems in Klebsiella and other Enterobacteriaceae.

- Study sites in Ohio, Pennsylvania, Michigan, and North Carolina.
- Study period 12/24/2011 until 6/30/2016
- All hospitalized patients with clinical culture positive for carbapenem-resistant *K. pneumoniae* (CRKP) were included
- Rep-PCR for molecular strain typing on all available isolates
- Network analyses at the facility and individual level were performed

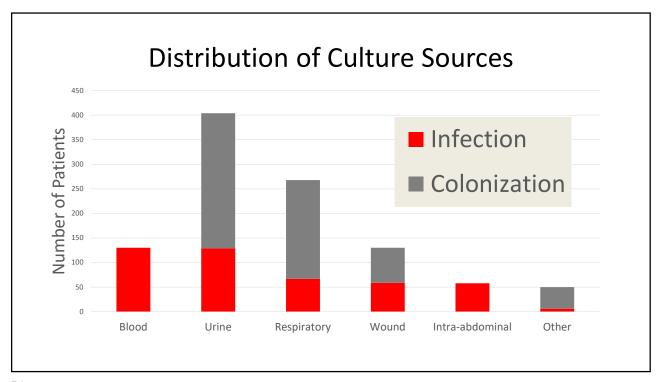

CRE in US (CRACKLE-2 data)

MDRO Network
Antibacterial Resistance Leadership Group

- Prospective, observational, multi-center, cohort study
- 2016-2017
- Consecutive hospitalized patients with CDC-defined CRE
- Analysis of first unique
   1,040 patients from 49 US
   medical centers

van Duin et al. Lancet ID 2020; 20(6):731-741.

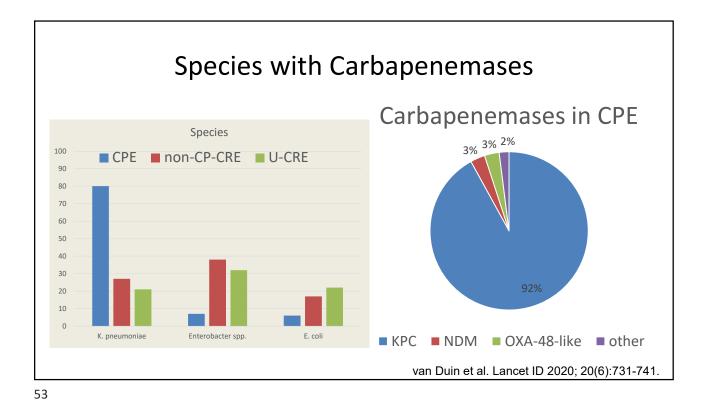

#### CDC-CRE: 3 subsets

All isolates met CDC criteria for CRE at local micro lab

- **CPE**: Carbapenemase-producing Enterobacterales
  - Carbapenemase gene present on whole genome sequencing and/or targeted PCR
- Non-CP-CRE: Non-carbapenemase-producing CRE
  - No carbapenemase gene present
  - Carbapenem resistance confirmed in central laboratory
- U-CRE: "Unconfirmed" CRE
  - No carbapenemase gene present
  - Carbapenem susceptible in central laboratory (resistant by local testing)

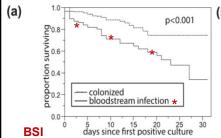

van Duin et al. Lancet ID 2020; 20(6):731-741.

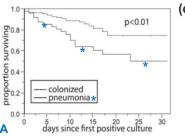

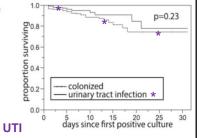

Outcomes are Similar in All Three Patient Groups 22 25 % patients with dead 17 15 12 alive with 2 or 3 events 21 19 alive with 1 event ■ alive without events CPE U-CRE non-CP-CRE

\* "Events" include lack of clinical response, unsuccessful discharge, and adverse events

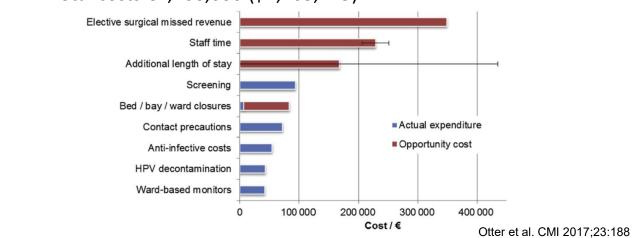

- BSI/pneumonia CRE infections
  - All-cause mortality 39%
- CRE-colonized
  - 12% all-cause mortality
- "Excess mortality" of 27% (no difference in UTI)

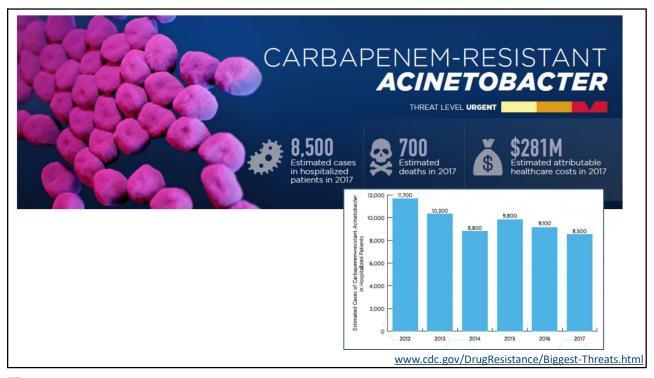

Hauck et al. CMI 2016;22:513

55

#### Financial cost of CRE

- NDM-producing CRE outbreak in UK
  - 40 patients in 5 hospitals
- Total costs €1,100,000 (\$1,163,415)

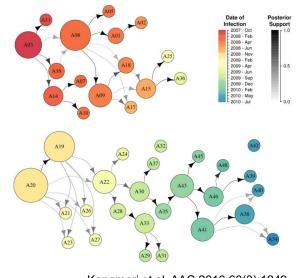

## Carbapenem-resistant *Acinetobacter baumanii* (CRAB) in the US

- · Healthcare-associated, affects the most severely ill
- Sustained outbreaks
- Environmental persistence
- Commonly multidrug-resistant
- Rapid acquisition of AMR genes through horizontal, plasmidmediated transfer
- Study Network of Acinetobacter as a Carbapenem-Resistant Pathogen (SNAP): all-cause 30-day mortality of 24%

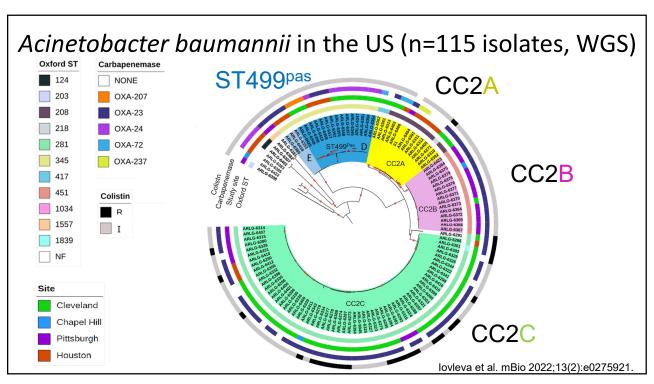

#### CRAB as nosocomial outbreak pathogen

- 46 clinical isolates from patients in burn unit at UNC (2007-2010)
- 3 separate clonal outbreaks identified (WGS)
- Extensive environmental contamination
- Primarily OXA carbapenemase genes identified

Kanamori et al. AAC 2016;60(3):1249

59

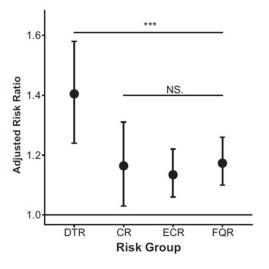

#### Higher Mortality for All GNRs with Difficult-to-Treat Resistance

#### Difficult-to-Treat Resistance (DTR)

- Non-susceptibility to all first-line agents:
  - Piperacillin-tazobactam
  - Ceftazidime/Cefepime
  - Aztreonam
  - Meropenem/Imipenem-cilastatin
  - Ciprofloxacin/Levofloxacin

Kadri et al. Clin Infect Dis 2018;67(12):1803-1814

#### **Summary**

- MDROs are a growing threat to hospitalized patients
- Worse outcomes in patients with MDRO infections vs. susceptible organisms
- Carbapenem-resistant Gram-negative bacteria especially worrisome
  - Limited treatment options
  - Poor outcomes
