Infection Prevention Plan FY2024

I. Description
Outlines the annual infection prevention priorities of Infection Prevention and UNC Hospitals.

II. Rationale
An organized, systematic plan based upon the annual infection control risk assessment that provides the foundation for an effective infection prevention program. This plan is the annual supplement to the Infection Prevention policy: Infection Prevention Program.

III. Policy
A. Goals

1. Overall

   - Reduce risk of healthcare-associated infections (HAI) for all patients, staff, and visitors by limiting unprotected exposures to pathogens, transmission of infection associated with procedures, and transmission of infections associated with the use of medical equipment, devices, and supplies.

2. Targeted

   a. Healthcare-associated infection reduction – at least 2% reduction of CLABSI hospital-wide, excluding those defined as mucosal barrier injuries (MBI).

   b. Improving compliance with hand hygiene guidelines through the Clean In, Clean Out hand hygiene compliance program.
• Units and departments consistently (>90%) achieve designated thresholds for hand hygiene observations.

**B. Risk Assessment**

*(see Attachment 1: Annual Unit - Based Risk Assessment)*

*(see Attachment 2: UNC Facility Risk Assessment)*

1. **Patient Populations at Increased Risk of Infection**
   a. All intensive care unit patients
   b. Solid organ transplant patients
   c. Burn patients
   d. Hematopoietic Stem Cell Transplant (HSCT) patients
   e. Immunosuppressed patients (e.g., absolute neutrophil count [ANC] <1000, agranulocytosis)

2. **Procedures/Devices that Increase Infection Risk**
   a. Central venous catheters
   b. Indwelling urinary catheters
   c. Tubes, drains, other devices inserted percutaneously
   d. Intubation and prolonged ventilator support
   e. Surgical procedures
   f. ECMO/VAD

3. **Epidemiologically Important Pathogens**
   a. Legionella
   b. Mold (e.g., Aspergillus, Rhizopus, Mucor)
   c. MRSA
   d. VRE
   e. *C. difficile*
   f. MDR Gram negative bacteria
   g. Carbapenem-resistant *Enterobacteriaceae*
   h. *Candida auris*

4. **High Consequence Pathogens**
• High consequence pathogens will include pandemic influenza strains including highly pathogenic avian influenza (e.g., H5N1, H7N9), SARS-CoV, MERS-CoV, COVID-19, Y. pestis, agents of viral hemorrhagic fevers (Ebola, Marburg, Lassa, Congo-Crimean fever), certain Hanta viruses, certain pox viruses (e.g., smallpox, Mpox, vaccinia), and any other highly pathogenic emerging infectious disease as deemed appropriate.

C. General Strategies to Reduce Infection Risk

The following are evidence-based strategies recommended to prevent infections. Some of these are led by the Department of Infection Prevention and others by our partners with this department’s support.

1. Identify risk for acquiring and transmitting infections based on geographic location, community and population served
   a. Receive public health alerts on community illnesses and trends from the NC Public Health Department.
   b. Public Health Epidemiologist at UNC Hospitals to act as liaison between UNC Hospitals and the public health department.
   c. Attend biannual Public Health Institutional Task (PHIT) Force meetings with Public Health Department leadership and other facilities in our area.

2. Identify and control outbreaks
   a. Review of microbiology, immunology, and molecular microbiology reports
   b. Prospective and syndromic surveillance
   c. Pulsed field gel electrophoresis of outbreak pathogens
   d. Epidemiologic assessment as indicated (e.g., timeline, epidemic curve, case-control study)
   e. Institution of prevention and control measures as indicated (e.g., isolation, cohorting of patients and staff, improved hand hygiene, active surveillance cultures, assessment of environmental cleaning, and enhanced environmental cleaning)
   f. Exposure follow-up (in conjunction with Occupational Health Services [OHS])

3. Perform surveillance for healthcare-associated infections
   a. Follow CDC National Healthcare Safety Network (NHSN) definitions
   b. Prospective and targeted retrospective
   c. Comprehensive: inpatient-related and outpatient-detected
d. Calculation/distribution of monthly infection rates and line listing of infected patients for each inpatient unit/service line

e. Analysis of infection data to examine healthcare equity issues

f. Monthly and as needed analysis of potential for cross-transmission

g. Targeted surveillance for home health/hospice infections

h. Monitor incidence of healthcare-associated device-related or procedure-related infections
   i. Central Line-Associated Bloodstream Infections (CLABSI)
   ii. Ventilator-Associated Events (VAE)
   iii. Surgical Site Infections (SSI)
   iv. Catheter-Associated Urinary Tract Infections (CAUTI)
   v. *Clostridioides difficile* infections (CDI)

4. Monitor and audit key process data on healthcare-associated device-related or procedure-related infections and make accessible to stakeholders, including leaders, licensed practitioners, nursing staff, and all UNC Hospitals staff through dashboard.

5. Conduct routine monitoring
   a. Biological indicators for tabletop sterilizers
   b. Endoscopes used for Endoscopic Retrograde Cholangiopancreatography (ERCP)
   c. Dental water lines
   d. Water baths in Transfusion Services

6. Improve Hand Hygiene Compliance
   a. Support compliance monitoring through Clean In, Clean Out program and provide feedback to staff
   b. Routinely evaluate the availability and acceptability of hand hygiene products
   c. Provide just-in-time peer coaching
   d. Provide frequent and tailored education on when and how to perform hand hygiene along with frequent visible reminders
   e. Enlist organizational leaders to serve as role models
   f. Ensure commitment of leadership to achieve and sustain compliance of ≥ 90%. Managers must hold everyone accountable for proper hand hygiene.
g. Continue to support efforts to engage patient and families in hand hygiene improvements activities.

h. Continue to promote engagement in Clean In, Clean Out across all areas.

7. Support Infection Control Liaison Program
   a. Unit-based staff, outpatient care services clinical staff, and ancillary care staff (i.e., Environmental Services, Nutrition and Food Services, Patient Transport) with focused infection control training provided by Infection Prevention.
   b. Responsible for assessing their area's compliance with infection control policies/procedures and conducting performance improvement activities related to infection prevention (e.g., reducing device-associated infections, monitoring, and improving hand hygiene compliance).
   c. Serves as the contact person to disseminate infection control information, updates, and answer staff questions.

8. Ensure compliance with Infection Prevention related Joint Commission National Patient Safety Goals
   • Comply with either the current Centers for Disease Control and Prevention (CDC) hand hygiene guidelines and/or the current World Health Organization (WHO) hand hygiene guidelines.

9. Prevent HAI due to multi-drug resistant organisms (MDROs)
   a. Annual risk assessment for MDRO
   b. Ensure infection control policies support prevention strategies

10. Implement evidence-based strategies for prevention of Central Line-Associated Bloodstream Infections (CLABSI)
    a. Annually review and revise Central Line Insertion, Access, and Maintenance Bundle as needed, and provide ongoing education on bundle
    b. Monitor and promote chlorhexidine gluconate (CHG) treatments in intensive care units, select step-down units, and dedicated oncology units
    c. Promote processes for daily assessment of central line need
    d. Collect and analyze peer audit data on central line dressing, tubing, and disinfecting cap maintenance, and disseminate compliance data to unit leadership monthly
    e. Provide just-in-time coaching on central line dressings, tubing, and disinfecting caps to frontline staff and periodic feedback to nurse managers
f. Work with units and service leader teams to perform case reviews for all CLABSI not classified as Mucosal Barrier Injuries (MBI)

g. Create educational materials as needed on specific topics around CLABSI prevention projects:

i. Carolina Antimicrobial Stewardship Program (CASP): diagnostic stewardship

ii. Center for Nursing Excellence (CNE): all CLABSI prevention-related education

iii. Central Line Insertion Quality Improvement Consortium (CLIQC): support for standardized insertion training and checklist for providers

iv. CVAD Liaison Team: various projects including central line necessity and maintenance of challenging dressings

v. Epic team: improvement of EMR related to documentation on central lines

vi. Vascular and Interventional Radiology (VIR) and Venous Access Team (VAT) - best line type for patient

vii. Value Analysis Team - product roll outs

viii. Multidisciplinary colleagues: Providers, nursing, pharmacy, nursing assistants, etc.

11. Implement evidence-based strategies for prevention of Surgical Site Infections (SSI)

a. Annually review and revise SSI Prevention Bundle as needed and provide ongoing education on bundle.

b. Collaborate with PreOp colleagues to ensure CHG wipes and appropriate education available for patients.

c. Promote standardized, evidence-based practices for patient skin preparation prior to surgery. Use previously created LMS for staff education and updated LMS as needed.

d. Collaborate with local and system groups to include evidence-based SSI prevention measures on Enhanced Recovery After Surgery (ERAS) pathways.

e. Ensure Peri-Operative Services and Anesthesia infection control policies support prevention strategies.

f. Participate in Peri-operative Quality Council to provide perspective from infection prevention on all peri-op projects
g. Trend surgical procedure-specific infection rates and unit rates, provide feedback to key stakeholders, and plan collaborative interventions as necessary.

   a. Annually review and revise CAUTI Prevention Bundle as needed and provide ongoing education on bundle.
   b. Collaborate with CNE to ensure staff education includes:
      i. Aseptic insertion of catheter
      ii. Daily assessment for urinary catheter need
      iii. Appropriate maintenance of indwelling urinary catheters
   c. Collaborate with Carolina Antimicrobial Stewardship Program (CASP) on work related to diagnostic stewardship.
   d. Provide just-in-time coaching on indwelling urinary catheter maintenance to front-line staff and periodic feedback to nurse managers.

13. Implement evidence-based strategies for prevention of *Clostridioides difficile* infections
   a. Annually review and revise *C. difficile* Prevention Bundle as needed and provide ongoing education on bundle.
   b. Collaborate with Carolina Antimicrobial Stewardship Program (CASP) on work related to diagnostic and antimicrobial stewardship
   c. Partner with Clean In, Clean Out program to promote appropriate hand hygiene during care of patients with *C. difficile*.
   d. Collaborate with provider and nursing colleagues on use of enteric precautions for patients with *C. difficile* infection for 30 days post treatment.
   e. Continue partnership with Environmental Services in ensuring:
      a. Use of bleach for daily and terminal cleaning for rooms of patients with *C. difficile* infection
      b. Use of ultraviolet light technology for terminal cleaning of rooms of patients with *C. difficile* infection

14. Manage HAIs as Sentinel Events When Indicated
   a. Review all HAIs for indications of an unanticipated death or permanent loss of function
b. Notify Risk Management of suspected sentinel event via internal notification system

c. Participate in root cause analysis and follow up as requested

15. Construction Rounds and Construction Risk Assessment Meetings

a. Rounds with Plant Engineering every 2 weeks to active construction and renovation sites in UNC Hospitals and on an as needed basis

b. Attend construction meetings held by Plant Engineering and Contract Services as needed

c. Review blueprints and risk assessments for all new construction and renovations in clinical areas

16. Infection Prevention Rounds

a. Evaluate compliance with infection prevention policies/practices

b. Communicate recommendations to manager with their follow-up documented

17. Policy Review and Revision

18. Committee Participation: Refer to the Infection Prevention policy: Infection Prevention Program for committee information

19. Periodic Comprehensive TB Risk Assessment

20. Consultation, Education/Training

a. In-services, presentations, educational material to staff, visitors/families, licensed practitioners, contract employees, students, and volunteers

b. Computer-based training modules

c. Educational videos

d. Newsletter articles

e. Educational materials (e.g., flyers, booklets, brochures)

f. Quality Improvement support from Infection Prevention Quality Improvement Staff

g. On-call availability 24/7 for Infection Prevention consultation

21. Additional Strategies to Reduce Infections for the Immunosuppressed Patient (e.g., absolute neutrophil count [ANC<1000], agranulocytosis)

a. Ideally a private positive pressure room, HEPA filtration for HSCT patients
b. No live plants or fresh flowers

c. Immunosuppressed diet per physician order

d. Patient must wear tight-fitting surgical mask when outside room

e. Child visitor restrictions during periods of high influenza, RSV, and/or COVID-19 community transmission

22. Additional Strategies for Home Health and Hospice

a. Trend analysis of device-related infections (urinary catheter-associated UTIs and central line-associated bloodstream infections)

b. Promote immunizations to prevent respiratory infections: influenza and pneumococcal pneumonia vaccines (as recommended by ACIP)

D. Specific Strategies to Address Infection Risks

- Based on the Facility Level and Unit-Specific Risk Assessments, the following strategies will be employed in FY24 for elements with scores of ≥ 5:

a. Viral Hemorrhagic Fever
   i. Coordinate High Consequence Pathogen Preparedness Committee
   ii. Refine High Consequence Pathogen Preparedness plans and exercise development

b. CLABSI prevention
   i. Leadership of CLABSI-specific workgroups as part of FY24 CLABSI initiative and organizational goal
   ii. Identification of target areas and partnership with areas on development of strategies and metrics
   iii. Creation and maintenance of tools for CLABSI prevention (e.g., peer audits, CHG toolkit)
   iv. All strategies listed in section III, C, 9.

c. SSI Prevention
   i. Collaborate with ERAS partners to promote infection prevention elements being added to system ERAS pathways
   ii. All strategies listed in section III, C, 10.

d. Candida auris
i. Identification of patients with *Candida auris*

ii. Implementation of transmission-based isolation precautions for patients with *Candida auris*

iii. Provide education for staff caring for patients with *Candida auris*

e. Water intrusion

   i. Multi-disciplinary workgroup will be formed

   ii. Notification and evaluation process development

   iii. Continue to expand products to prevent wipes from being flushed

f. High Level Disinfection (HLD) for endoscopes and patient equipment

   i. Support routine microbiologic testing

   ii. Support tracking of usage and routine maintenance of endoscopes

   iii. Provide staff education for HLD activities

   iv. Perform Infection Prevention rounds in areas conducting HLD

   v. Participate in organization-wide HLD workgroup

g. Unit-level strategies

   ◦ Inpatient units with risk assessment score >5

     - Rounding at least monthly to promote compliance with evidence-based practices for infection prevention relevant to the unit’s surveillance data.

E. Evaluation of Plan Effectiveness

See Attachment 3 - Hospital Quality Assessment Performance Improvement Plan

1. Statistical analysis of infections

2. Trend analysis of infection rates

3. Device-associated rates to include home health and hospice

4. Monthly infection reports to nurse managers, clinical directors, infection control liaisons

5. Monthly infection reports to Infection Control Committee

6. Infection Prevention rounds report and annual compliance assessment

7. Support Occupational Health Services to monitor compliance with required and
recommended immunizations

8. Annual assessment of communicable disease exposures with trend analysis
9. Annual risk assessment for MDROs with trend analysis
10. Periodic assessment of process measures with staff feedback
   a. Evidence based processes to prevent surgical site infections
   b. Evidence based processes to prevent central line-associated bloodstream infections
   c. Evidence based processes to prevent indwelling catheter associated urinary tract infections
   d. Evidence based processes to prevent *Clostridioides difficile* infections
   e. Evidence based processes to prevent ventilator associated pneumonia and ventilator associated events
   f. Hand hygiene compliance
   g. Isolation precautions compliance
