Occupational Health Update: Long Term Care Facilities 11-05-24

Erica Pettigrew, MD, JD, MPH
Associate Professor, UNC Dept of Family Medicine
Medical Director, Orange County Health Department
Medical Director, Occupational Health at UNC Medical Center

UNC SCHOOL OF MEDICINE

1

Disclosures

- No financial relationships to disclose
- No off-label or investigational use of medications and/or devices
- The information and views set out in this presentation are those of the author and do not necessarily reflect the official opinion of the University of North Carolina at Chapel Hill or UNC Health

2

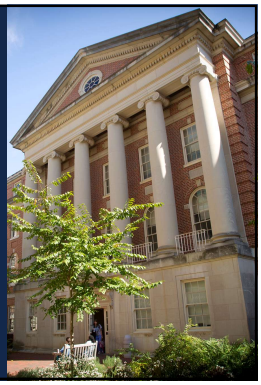
Objectives

- ACIP Updates
- Vaccines for HCPs (Pre-exposure prophylaxis)
- Post-exposure prophylaxis (Bloodborne Pathogens)
- COVID-19
- Employee Well-Being
- Civic Health

3

ACIP Updates

Advisory Committee on Immunization Practices



4

ACIP April 2022 Update

- Hepatitis B Vaccines are now universally recommended for all adults aged 19 – 59 years old instead of based solely on risk factors. This reflects the rising cases of Hepatitis B since the nadir in 2014 and acknowledges that risk-based intervention misses people reluctant to disclose.
- Also note that ACIP recommendations for Hepatitis B screening were updated in March 2023 to include testing at least once per lifetime in addition to risk factor-based testing

5

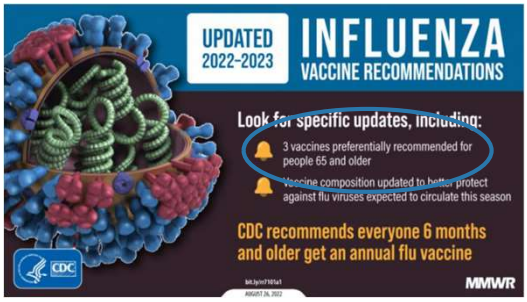
ACIP June 2022 Update

- **JYNNEOS for Monkeypox**
  - Two vaccines (JYNNEOS and ACAM2000) for orthopoxviruses (including MPX and smallpox). JYNNEOS w/ much less contraindications.
  - Pre- or post- exposure prophylaxis indications based on risk factors (generally intimate, prolonged contact)
  - Most healthcare workers do not need to get this vaccine. Exceptions include HCPs w high risk exposure (caring for +pt for prolonged period without PPE) and lab personnel handling specimens

https://www.cdc.gov/mmwr/volumes/71/wr/mm7122e1.htm

6

ACIP August 2022 Update



7

ACIP June 2023/2024 Update

- RSV Vaccine (Abrysvo or Arexvy)
  - Single dose (for now), high efficacy over two RSV seasons
  - Can be coadministered with other vaccines
  - Adults 75+
  - Adults 60 – 74 at higher risk for severe illness and hospitalization
  - Got rid of shared decision-making
  - Abrysvo is also recommended for pregnant people 32 – 36 wks GA from Sept – Jan
  - When vaccinating nonpregnant adults, it should be done year-round (in contrast with pregnant people and babies only during RSV season)
  - Not affirmatively recommended for healthcare workers at this time unless they fall into another category

8

ACIP December 2023 Update

- Polio
  - New: Unvaccinated or partially vaccinated adults should complete primary series
    - Case of polio in 2022 in NY in an unvaccinated adult prompted this new recommendation
  - Unchanged: Fully vaccinated adults with exposure risk (travel to endemic area, etc) should get one booster

https://www.cdc.gov/mmwr/volumes/72/wr/mm7249a3.htm

9

ACIP June 2024 Update

- **Pneumococcal Vaccines**
  - New availability of PCV21 (Merck Sharp & Dohme Corp.)
  - Don't forget PCV15 and PCV20 were approved in 2022.
  - PCV21 is interchangeable with PCV20, unless you are in the Western US where preference is PCV20 since it has serotype 4.
  - PCV13 is gone, and PPSV23 is really only used in conjunction with PCV15. Easiest is if you get either PCV20 or PCV21 on formulary.
  - Not affirmatively recommended for healthcare workers at this time unless they fall into another category

https://www.cdc.gov/mmwr/volumes/73/wr/mm7336a3.htm?s_cid=mm7336a3_w

10

ACIP June 2024 Update

Adults ≥65 years old
Complete pneumococcal vaccine schedules

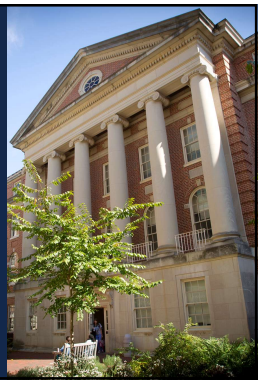
Prior vaccines	Option A	Option B
None*	PCV20 or PCV21	PCV15 → ≥1 year[†] → PPSV23[‡]
PPSV23 only at any age	≥1 year → PCV20 or PCV21	≥1 year → PCV15
PCV13 only at any age	≥1 year → PCV20 or PCV21	≥1 year[§] → PPSV23
PCV13 at any age & PPSV23 at <65 yrs	≥5 years → PCV20 or PCV21	≥5 years[§] → PPSV23

* Also applies to people who received PCV7 at any age and no other pneumococcal vaccines
† If PPSV23 is not available, PCV20 or PCV21 may be used
‡ Consider minimum interval (8 weeks) for adults with an immunocompromising condition, cochlear implant, or cerebrospinal fluid leak (CSF) leak
§ For adults with an immunocompromising condition, cochlear implant, or CSF leak, the minimum interval for PPSV23 is ≥8 weeks since last PCV13 dose and ≥5 years since last PPSV23 dose; for others, the minimum interval for PPSV23 is ≥1 year since last PCV13 dose and ≥5 years since last PPSV23 dose

See CDC for guidelines on adults 19-64 with chronic conditions
https://www.cdc.gov/pneumococcal/downloads/Vaccine-Timing-Adults-JobAid.pdf

11

Vaccines Indicated for Healthcare Personnel



12

HCP Vaccination Recommendations

Vaccination	Recommendation
COVID-19	Everyone 6 months+ should get one dose of newest formulation (came out 9/1/24)
Hepatitis B	If no prior dose, either 2 doses of Heplisav-B or 3-dose series of either Engerix or Recombivax Obtain serology 1-2 months after final dose
Influenza	Give 1 dose annually
MMR	HCP born in 1957 or later need 2-doses of MMR, 4 weeks apart if no prior immunity or vaccination. Before 1957, consider serology testing and dosing if needed
Varicella	If no prior infection, serologic immunity, prior vaccination, give 2 doses of varicella vaccine 4 weeks apart
Tetanus, diphtheria, pertussis	Give 1 dose to all who have not received previously. Each pregnancy. Booster every 10 years (Td or Tdap)
Meningococcal	Routinely to microbiologists exposed to isolates of *N. Meningitidis*

https://www.cdc.gov/vaccines-adults/recommended-vaccines/index.html

13

COVID Vaccines

- So wait – I thought it wasn't required anymore for healthcare personnel?
  - The federal CMS regulation, which had required all HCPs to be covid vaccinated, has been retired. Individual hospitals, LTC companies, etc can decide to have it be an internal condition of employment if they wish. CMS continues to require reporting of HCPs' vaccination rates.

14

- Yes, it is safe to receive COVID, flu and RSV shots at the same time!
- Make it as easy as possible for your staff and residents to get the latest COVID shots

15

Hepatitis B

- **Indications**
  - Universal; HCP with potential blood exposure (OSHA required OR signed refusal)
- **Administration**
  - Prior to administration do not routinely perform serologic screening for HB unless cost effective
  - After last dose in the series, test for immunity (>10 mIU/mL); if inadequate provide one more series and test again for immunity; if inadequate test consider as "non-responder"
  - If non-immune after two series, test for HBsAg

16

Hepatitis B

- HEPLISAV-B approved in late 2017
- Nonpregnant adults > 18 years of age
- Two doses one month apart
- Not studied in hemodialysis patients

Table 7
Study 3: Seroprotection Rates of HEPLISAV-B and Engerix-B[c] (ages 18 - 70 years)

Age (years)	HEPLISAV-B[a]		Engerix-B[a]		Difference in SPRs (HEPLISAV-B minus Engerix-B)
	N	SPR (95% CI)	N	SPR (95% CI)	Difference (95% CI)
18-29	174	100.0% (97.9, 100.0)	99	93.9% (87.3, 97.7)	6.1% (2.8, 12.6)*
30-39	632	98.9% (97.7, 99.6)	326	92.0% (88.5, 94.7)	6.9% (4.2, 10.4)*
40-49	974	97.2% (96.0, 98.2)	518	84.2% (80.7, 87.2)	13.1% (9.9, 16.6)*
50-59	1439	95.2% (94.0, 96.3)	758	79.7% (76.6, 82.5)	15.5% (12.6, 18.7)*
60-70	1157	91.6% (89.9, 93.1)	588	72.6% (68.8, 76.2)	19.0% (15.2, 23.0)*

https://www.fda.gov/downloads/BiologicsBloodVaccines/Vaccines/ApprovedProducts/UCM584762.pdf

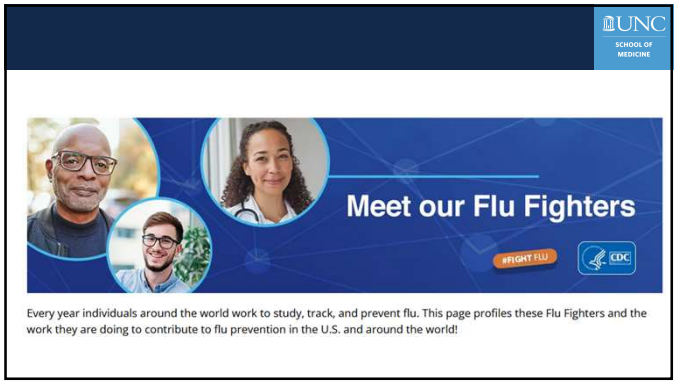
17

Influenza Season 23-24

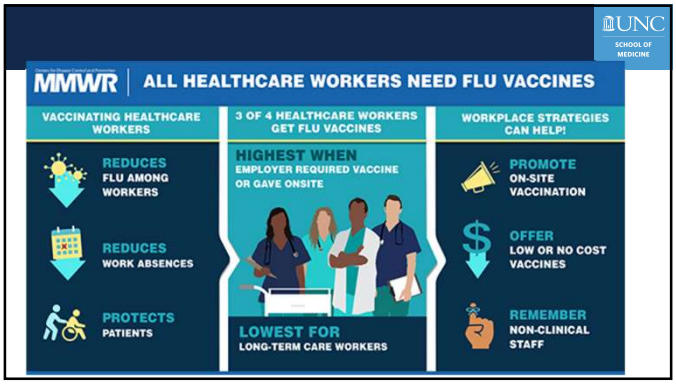
	Week 11
No. of specimens tested	82,202
No. of positive specimens (%)	9,862 (12.0%)
Positive specimens by type	
Influenza A	5,121 (51.9%)
Influenza B	4,741 (48.1%)

Weekly U.S. Influenza Surveillance Report | CDC

18



19



20

Influenza vaccines

- ACIP recommendations
  - One annual dose for all persons ≥ 6 months of age (sometimes 2 doses for kids)
  - Required for residents and HCP in ECFs in NC (1 N.C. Gen. Stat. Ann. § 131E-113(a))
  - Required in SC LTC (S.C. Code Ann. Regs. 61-17)

https://www.cdc.gov/flu/pdf/professionals/acip/acip-2021-22-summary-of-recommendations-updated.pdf

Long-term-care-toolkit.pdf (cdc.gov)

21

Measles is coming back

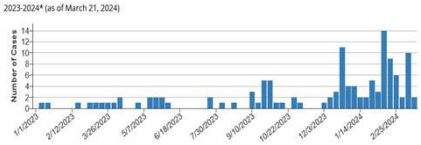
Measles cases in 2024

As of March 21, 2024, a total of 64 measles cases were reported by 17 jurisdictions: Arizona, California, Florida, Georgia, Illinois, Indiana, Louisiana, Maryland, Michigan, Minnesota, Missouri, New Jersey, New York City, Ohio, Pennsylvania, Virginia, and Washington.

More cases in 2024 so far than all of 2023

Super contagious: 9 out of 10 susceptible people who are exposed will contract measles

Number of measles cases reported by week

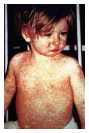


If you suspect a case of measles in your facility, call your local health department or NC Epi On Call 919-733-3419 IMMEDIATELY 24/7 (not days or hours later)

22

Measles, Mumps, Rubella (MMR)

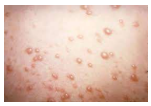
- **Measles**
  - Born before 1957: Consider immune (except during outbreak): Born after 1957: 2 doses
  - Immunity = Appropriate immunizations or positive serology
- **Mumps**
  - Born before 1957: Consider immune (except during outbreak): Born after 1957: 2 doses.
  - 3rd dose considered in outbreak settings.
  - Immunity = Appropriate immunizations or positive serology
- **Rubella**
  - 1 dose of MMR
  - Immunity = Appropriate immunizations or positive serology

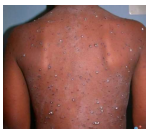


23

Varicella

- **Special consideration should be given to those who have close contact with**
  - Persons at high risk for severe disease (e.g., immunocompromised persons)
  - Persons are at high risk for exposure or transmission (e.g., teachers of young children, college students, military recruits, international travelers)
- **Immunity**
  - 2 doses of vaccine (gold standard), positive serology. Could also accept history of varicella if lab confirmed or epi-linked, but verbal report "I had chicken pox as a kid" doesn't count.
  - Receiving Shingrix vaccine does not count as immunity for varicella

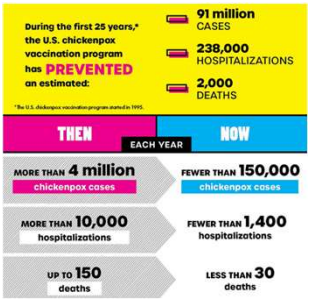




https://www.cdc.gov/mmwr/preview/mmwrhtml/rr6007a1.htm

24

Varicella



25

Tetanus-diphtheria-acellular pertussis (Tdap)

- **Substitute 1 dose Tdap for all adults when Td booster due if no history of Tdap.**
  - May be used to provide tetanus PEP
  - Provide to all adults with exposure to young children (no delay after Td)
  - Also recommended for pregnant people in each pregnancy (preferably 27-36 weeks gestational age)
  - Only one dose of Tdap is required, employees who are 10 years out from Tdap can be boosted with Td or Tdap (but preference is Tdap).

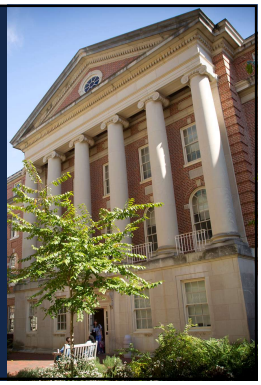
26

Meningococcal Vaccine

- Recommended for adults had high risk of disease (persistent complement deficiency, functional or anatomic asplenia, or HIV infection (adolescents)).
  - Two vaccines series are needed: MenACWY and Serogroup B (MenB)
- MenACWY
  - Immunosuppressed – 2 doses of MenACWY and boosters every 5 years, 2 or 3-dose MenB
  - **Microbiologists – 1 dose, booster every 5 years (MenACWY), 2 or 3-dose MenB**
    - **Now they could get the combo MenABCWY vaccine when both are indicated**
  - Anatomic/functional asplenia patients should be vaccinated against MenACWY/MenB

27

Tuberculosis Surveillance



28

TAKE ON TB

To eliminate tuberculosis (TB), we must prioritize groups at increased risk of TB

Living in congregate settings is a risk factor for TB disease:

Homeless Shelters

Correctional Facilities

Long-term Care Facilities

www.cdc.gov/tb

CDC Centers for Disease Control and Prevention National Center for HIV, Viral Hepatitis, STD, and TB Prevention

29

Testing/ Treatment

- **Baseline (preplacement) screening and testing.** All U.S. healthcare personnel should have baseline TB screening, including an individual risk assessment, which is necessary for interpreting any test result. IGRAs (quant gold or T spot) or TB skin tests can be used. Follow CDC algorithm for interpretation.
- **Serial screening and testing for health care personnel without LTBI is NOT indicated.** In the absence of known exposure or evidence of ongoing TB transmission, U.S. healthcare personnel (as identified in the 2005 guidelines) without LTBI should not undergo routine serial TB screening or testing at any interval after baseline (e.g., annually.) Could consider annual screening with high-risk groups like respiratory therapists.
- **Healthcare personnel with LTBI and no prior treatment** should be offered, and strongly encouraged to complete treatment with a recommended regimen, including short-course treatments unless a contraindication exists

Sosa LE, Njie GJ, Lobato MN, et al. Tuberculosis Screening, Testing, and Treatment of U.S. Health Care Personnel: Recommendations from the National Tuberculosis Controllers Association and CDC, 2019. MMWR Morb Mortal Wkly Rep 2019;68:439–443. DOI: http://dx.doi.org/10.15585/mmwr.mm6819a3external icon.

30

NC TB Policy Manual

- **SARS-CoV-2 Vaccine and TB testing**
  - TB screening with skin test or interferon gamma release assay may be performed regardless of timing of SARS-CoV-2 vaccination (and visa versa). – Jan 28 2021 memo
- **Patients in long term care facilities**
  - Testing upon admission (two-step TST or IGRA). Annual screening which can be accomplished by a verbal elicitation of symptoms.
    - 10A NCAC 41A .0205; 10A NCAC 13D .2202 &.2209
- **Long term care facility employees**
  - Testing upon employment (two-step for TST or IGRA) and after any exposures. Annual education.
    - 10A NCAC 41A .0205; 10A NCAC 13D .2202 & .2209; OSHA

https://epi.dph.ncdhhs.gov/cd/tbds/manuals/tb/COVIDvaxMemo01282021.pdf

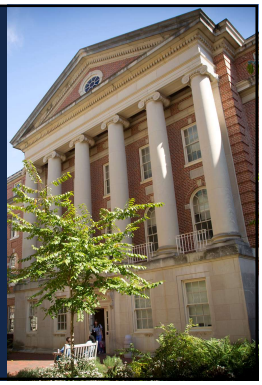
31

Fit Testing

- If employees may need to wear respirators as part of their PPE (i.e. for caring for COVID patients), then they need to be annually fit tested through your respiratory protection program.
- Medical clearance for N95s is not complicated – there really aren't medical conditions which affirmatively preclude the use of an N95 except anatomical challenges.

32

Bloodborne Pathogens



33

Bloodborne Pathogens

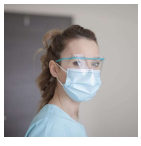
- Approximately 385,000 needle sticks and other sharps-related injuries to hospital-based healthcare personnel each year.
- 58 total known occupationally acquired HIV cases in HCPs; all but 1 were prior to 1999.
- 88% (50/57) of the documented cases of occupational HIV transmission from 1985-2004 involved a percutaneous exposure. Of those, 45/57 involved a hollow-borne needle.
- 41% of sharp injuries occur during use; 40% after use/before disposal; 15% during/after disposal

https://www.cdc.gov/mmwr/preview/mmwrhtml/mm6353a4.htm

34

Steps for Prevention

- Needleless devices
- Single-hand recapping
- Handwashing stations
- Sharps containers
- Laundry
- Disposal of contaminated material
- Mask, eye protection, gloves, & face shields



35

OSHA Bloodborne Pathogens Standard

- Employers must establish a written exposure control plan and provide annual training
- Mandates use of universal precautions (all body fluids assumed contaminated except sweat)
- Employers must utilize engineering and work practice controls to minimize/eliminate exposure

(e-CFR 1910.1013)

https://www.osha.gov/laws-regs/regulations/standardnumber/1910/1910.1030

36

OSHA Bloodborne Pathogens Standard

- Requires offering hepatitis B vaccine to persons with the potential for exposure
- Testing of exposed employees for Hepatitis B and HIV
- Post-exposure prophylaxis must be immediately available as per CDC guidelines
- All work-related needle stick injuries and cuts from sharp objects that are contaminated with another person's blood or other potentially infectious material are OSHA-reportable regardless of the source patient disease status.

(e-CFR 1910.1013)

37

OSHA Bloodborne Pathogens Standard

- All work-related needle stick injuries and cuts from sharp objects that are contaminated with another person's blood or other potentially infectious material are OSHA-reportable regardless of the source patient disease status.

OSHA
Occupational Safety and Health Administration

38

Bloodborne Pathogens

- **Risk (percutaneous exposure)**
  - HBV
    - 22.0 – 30.0% (HBeAG+)
    - 1.0 – 6.0% (HBeAG-)
  - HCV
    - 1.8%
  - HIV
    - 0.3% (1 in 300)
- **Risk (mucous membrane)**
  - HBV
    - Yes (rate unknown)
  - HCV
    - Yes (rate unknown but very small)
  - HIV
    - 0.1% (1 in 1000)
    - < 0.1% (non-intact skin)

RISK

- Test source for hepatitis B (HBsAg), hepatitis C (HCV PCR), HIV (4th gen, HIV antibodies and p24 antigen)
- Provide hepatitis B prophylaxis, if indicated
- Provide follow-up for hepatitis C, if indicated
- If source HIV+ or at "high risk" for HIV, offer employee HIV prophylaxis per CDC protocol

CDC, 2003

39

Post-exposure Pathway

Infection Status of Source Patient	Baseline Labs	2 Weeks	4 Weeks	6 Weeks	4 Months	6 Months
DATE: →	__/__/____	__/__/____	__/__/____	__/__/____	__/__/____	__/__/____
HIV positive	HIV test – 4th generation	Lab – only if baseline abnormal or clinical indication		HIV test – 4th generation	HIV test – 4th generation	
HBsAg positive	• If source positive and HCP unknown, need HBsAb. • If HBsAb ≥12 mIU/mL testing complete. • If HBsAb <12 mIU/mL, need anti-HBc & HBsAg at baseline					• Anti-HBc • HBsAg
Hepatitis C RNA PCR positive	Anti-HCV (Hepatitis C antibody)	Lab – only if baseline abnormal or clinical indication		HCV RNA PCR	Anti-HCV (Hepatitis C antibody)	
Unknown source	• HIV test – 4th generation • If source unknown and HCP HBsAb unknown, need HBsAb • If HBsAb ≥12 mIU/mL testing complete. • If HBsAb <12 mIU/mL, need anti-HBc & HBsAg at baseline • HCV antibody	Lab – only if baseline abnormal or clinical indication		• HIV test – 4th generation • HCV RNA PCR	• HIV test – 4th generation • Anti-HCV (Hepatitis C antibody)	• Anti-HBc • HBsAg

40

Current HIV PEP

- 10A NCAC 41A .0202
- CONTROL MEASURES – HIV
  - When the source case is known, the attending physician or occupational health provider responsible for the exposed person shall notify the healthcare provider of the source case that an exposure has occurred.
  - This healthcare provider shall arrange HIV testing of the source person (unless known to be HIV+) and notify the OHS provider of the test results.
  - Source patient consent is **not required**

http://reports.oah.state.nc.us/ncac/title%2010a%20-%20health%20and%20human%20services/chapter%2041%20-%20epidemiology%20health/subchapter%20a/10a%20ncac%2041a%20.0202.html

41

Current HIV PEP

- Three-drug regiment
  - Tenofovir-emtricitabine (Truvada) + raltegravir (Isentress) for 4 weeks (28 days)
  - Other regiments are available for known HIV-source patients with specific drug resistance but these cases are rare.
  - Start within 72 hours
  - Baseline HIV, 6 weeks, 4-6 months

Kuhar, D. T., Henderson, D. K., Struble, K. A., Heneine, W., Thomas, V., Cheever, L. W., Gomaa, A., Panlilio, A. L., & US Public Health Service Working Group. (2013). Updated US Public Health Service Guidelines for the Management of Occupational Exposures to Human Immunodeficiency Virus and Recommendations for Postexposure Prophylaxis. *Infection Control and Hospital Epidemiology, 34*(9), 875–892. https://doi.org/10.1086/672271

42

Hepatitis B

- Universal; HCP with potential blood exposure (OSHA required or HCP may decline)
  - No need to routinely obtain Hep B titers if an employee has documented vaccine series and a positive titer
  - In practice, we usually titer and give a booster if titer is < 10 mIU/mL
  - For known non-responders, with exposure they should get Hepatitis B Immune Globulin (HBIG) within 24 hours (up to 7 days after exposure)

43

Hepatitis B

	HBsAg	Anti-HBc	HBsAb[a]
Acute infection	Positive	IgM positive	Negative
Infection resolved	Negative	IgG Positive	Positive
Chronic infection	Positive	IgG Positive	Negative
Vaccinated	Negative	Negative	Positive
Susceptible	Negative	Negative	Negative

Otero, William, Perga, Julián, & Gastelbondo, Johanna. (2018). Serology of hepatitis B virus: multiple scenarios and multiple exams. Revista colombiana de Gastroenterología, 33(4), 411-422. https://doi.org/10.22516/25007440.327

https://www.cdc.gov/pinkbook/hcp/table-of-contents/index.html?CDC_AAref_Val=https://www.cdc.gov/vaccines/pubs/pinkbook/hepb.html#Epidemiology

Postexposure Management of Health Care Personnel after Occupational Exposure to Blood and Body Fluids, by Health Care Personnel HepB Vaccination and Response Status

HepB Vaccination and Response Status	Postexposure testing results for source patient (HBsAg)	Postexposure testing results for HCP (anti-HBs)	HBIG[a] postexposure prophylaxis	Vaccination postexposure prophylaxis	Postvaccination Serologic Testing[b]
Documented responder[c] after complete series (3 or more doses)	No action needed	No action needed	No action needed	No action needed	No action needed
Documented nonresponder[d] after 2 complete series	Positive/ unknown	**	2 doses HBIG separated by 1 month	No action needed	No action needed
	Negative	No action needed	No action needed	No action needed	No action needed
Response unknown after a complete series	Positive/ unknown	less than 10 mIU/mL**	1 dose HBIG	Initiate revaccination	Yes
	Negative	less than 10 mIU/mL	None	Initiate revaccination	Yes
	Any result	greater than or equal to 10 mIU/mL	No action needed	No action needed	No action needed
Unvaccinated/ incompletely vaccinated or vaccine refusers	Positive/ unknown	**	1 dose HBIG	Complete vaccination	Yes
	Negative	No action needed	None	Complete vaccination	Yes

[a]HBIG should be administered intramuscularly as soon as possible after exposure when indicated. The effectiveness of HBIG when administered greater than 7 days after percutaneous, mucosal, or nonintact skin exposures is unknown. HBIG and HepB vaccine should be administered in separate anatomic injection sites.

[b]Should be performed 1 to 2 months after the last dose of the HepB vaccine series (and 4 to 6 months after administration of HBIG to avoid detection of passively administered anti-HBs) using a quantitative method that allows detection of the protective concentration of anti-HBs (greater than or equal to 10 mIU/mL).

[c]A responder is defined as a person with anti-HBs greater than or equal to 10 mIU/mL after 3 or more doses of HepB vaccine.

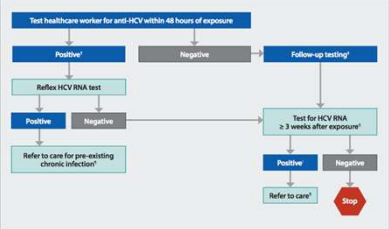
[d]A nonresponder is defined as a person with anti-HBs less than 10 mIU/mL after 2 complete series of HepB vaccine.

**HCP who have anti-HBs less than 10 mIU/mL, or who are unvaccinated or incompletely vaccinated, and sustain an exposure to a source patient who is HBsAg-positive or has unknown HBsAg status, should undergo baseline testing for HBV infection as soon as possible after exposure and follow-up testing approximately 6 months later. Initial baseline tests consist of total anti-HBc testing at approximately 6 months consists of HBsAg and total anti-HBc.

44

Hepatitis C

- No post-exposure prophylaxis
- Source patients should be tested by Hep C PCR



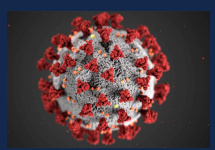
45

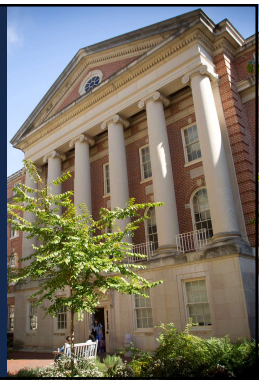
Follow-up Testing

- Hepatitis B
  - Not required if employee has immunity
- HIV
  - Dependent on source patient and available testing
- Hepatitis C
  - Dependent on source patient, test for HCV antibodies and HCV RNA

46

Occupational Health and COVID





47

COVID in the US March 2024

48

COVID Control Recommendations

Updated May 8, 2023

- Encourage all employees to remain up to date on COVID-19 vaccines, including provision of resources
- Establish a process to identify and manage individuals with suspected or confirmed COVID
- Implement source control measures (changed from earlier recommendations)
- Implement universal use of personal protective equipment for HCP
- Optimize use of engineering controls and indoor air quality
- Perform SARS-CoV-2 viral testing
- Create a process to respond to COVID exposures among HCP and others

https://www.cdc.gov/covid/hcp/infection-control/?CDC_AAref_Val=https://www.cdc.gov/coronavirus/2019-ncov/hcp/infection-control-recommendations.html
https://www.cdc.gov/covid/hcp/infection-control/guidance-risk-assesment-hcp.html?CDC_AAref_Val=https://www.cdc.gov/coronavirus/2019-ncov/hcp/guidance-risk-assesment-hcp.html

49

COVID Control Recommendations

- Encourage all employees to remain up to date on COVID-19 vaccines, including provision of resources
  - Recall that we discussed earlier that this is no longer mandatory for federal regulations but can be mandatory if your employer decides to make it

https://www.cdc.gov/covid/hcp/infection-control/?CDC_AAref_Val=https://www.cdc.gov/coronavirus/2019-ncov/hcp/infection-control-recommendations.html

50

COVID Control Recommendations (In Flux)

- Establish a process to identify and manage individuals with suspected or confirmed COVID
  - For HCPs, they should report any of the following three criteria to your Occupational Health:
    - Positive test for COVID
    - Symptoms of COVID
      - HCPs with even mild symptoms need a test!
      - Positive antigen test (like a home test) is sufficient; no need to retest with PCR
      - Negative antigen test is NOT sufficient and needs confirmatory PCR
      - Don't forget about flu and RSV!
      - Should not be working until at least 24 hrs without fever of any cause off antipyretics
    - Close contact to COVID

https://www.cdc.gov/covid/hcp/infection-control/?CDC_AAref_Val=https://www.cdc.gov/coronavirus/2019-ncov/hcp/infection-control-recommendations.html

51

COVID-19+ HCP Return to Work

HCP with mild to moderate illness who are *not* moderately to severely immunocompromised could return to work after the following criteria have been met:

- At least 7 days have passed *since symptoms first appeared* if a negative viral test* is obtained within 48 hours prior to returning to work (or 10 days if testing is not performed or if a positive test at day 5-7), **and**
- At least 24 hours have passed *since last fever* without the use of fever-reducing medications, **and**
- Symptoms (e.g., cough, shortness of breath) have improved.

*Either a NAAT (molecular) or antigen test may be used. If using an antigen test, HCP should have a negative test obtained on day 5 and again 48 hours later

HCP who were asymptomatic throughout their infection and are *not* moderately to severely immunocompromised could return to work after the following criteria have been met:

- At least 7 days have passed since the date of their first positive viral test if a negative viral test* is obtained within 48 hours prior to returning to work (or 10 days if testing is not performed or if a positive test at day 5-7).

*Either a NAAT (molecular) or antigen test may be used. If using an antigen test, HCP should have a negative test obtained on day 5 and again 48 hours later

52

What about quarantines for exposures?

Work restriction is not necessary for most asymptomatic HCP following a higher-risk exposure, regardless of vaccination status. Examples of when work restriction may be considered include:

- HCP is unable to be tested or wear source control as recommended for the 10 days following their exposure;
- HCP is moderately to severely immunocompromised;
- HCP cares for or works on a unit with patients who are moderately to severely immunocompromised;
- HCP works on a unit experiencing ongoing SARS-CoV-2 transmission that is not controlled with initial interventions;

53

Asymptomatic HCPs w COVID exposures

Following a higher-risk exposure, HCP should:

- Have a series of three viral tests for SARS-CoV-2 infection.
  - Testing is recommended immediately (but not earlier than 24 hours after the exposure) and, if negative, again 48 hours after the first negative test and, if negative, again 48 hours after the second negative test. This will typically be at day 1 (where day of exposure is day 0), day 3, and day 5.
  - Due to challenges in interpreting the result, testing is generally not recommended for asymptomatic people who have recovered from SARS-CoV-2 infection in the prior 30 days. Testing should be considered for those who have recovered in the prior 31-90 days; however, an antigen test instead of NAAT is recommended. This is because some people may remain NAAT positive but not be infectious during this period.
- Follow all recommended infection prevention and control practices, including wearing well-fitting source control, monitoring themselves for fever or symptoms consistent with COVID-19, and not reporting to work when ill or if testing positive for SARS-CoV-2 infection.
- Any HCP who develop fever or symptoms consistent with COVID-19 should immediately self-isolate and contact their established point of contact (e.g., occupational health program) to arrange for medical evaluation and testing.

54

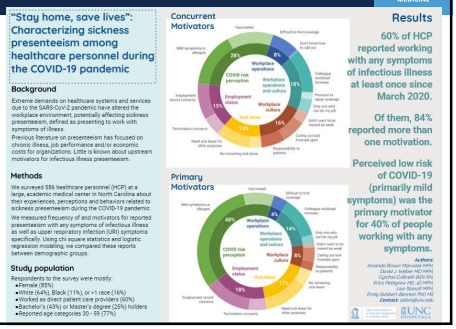
Employee Well-being

- Could be its own lecture
- Taking good care of employees benefits all: patients, employees, and the business (safer environment, lower turnover, less staffing shortages)
- Physical and mental well-being
  - Living wages and robust benefits
  - Parental leave
  - Comprehensive DEI (diversity, equity, and inclusion) trainings and meaningful reflections in workplace policies/practices, not just lip service
  - Safety from workplace violence
  - Fair PTO policies that disincentivize presenteeism
  - Access to resources for burnout, moral injury

55

Respiratory Illnesses on the Rise

- Presenteeism is a major threat to patient and employee health



56

Civic Health - Voting

Multipartisan Assistance Team (MAT)

A multipartisan assistance team, or "MAT," is a group appointed by a county board of elections to assist with mail-in absentee voting and other services to voters living at facilities such as hospitals, clinics, and nursing homes.

A MAT includes, at a minimum, two people who have different party affiliations (or, in the alternative, persons who were unanimously appointed by a bipartisan county board of elections). If you request help from a MAT, you should receive impartial, professional assistance. Their job is to help you vote, but your voting choices will remain confidential.

MATs are authorized to help voters in the following ways, with specific legal requirements:

- Providing voter registration services.
- Requesting an absentee ballot.
- Serving as an absentee witness.
- Marking the absentee ballot.
- Sealing the ballot and completing the absentee application.
- Mailing the voted absentee ballot in the closest U.S. mail depository or mailbox, if the voter has a disability.
