

RECOMMENDED PRACTICES TO INTERRUPT TRANSMISSION OF INFECTIOUS AGENTS IN LONG-TERM CARE FACILITIES

Evelyn Cook, RN, CIC

Associate Director

NC Statewide Program for Infection Control and Epidemiology (SPICE)

https://spice.unc.edu/

KEY CONCEPTS

- ► Risk of transmission of infectious agents occurs in all settings
- ► Infections are transmitted from resident-to-resident via HCPs hands or medical equipment/devices
- Unidentified residents who are colonized or infected may represent risk to other residents
- ► Isolation precautions are only part of a comprehensive IP program

FUNDAMENTAL ELEMENTS -

- ► Administrative support
- ► Adequate Infection Prevention staffing
- Good communication with clinical microbiology lab and environmental services
- ► A comprehensive educational program for HCPs, residents, and visitors
- ► Infrastructure support for surveillance, outbreak tracking, and data management

CONTROLLING TRANSMISSION
OF INFECTION

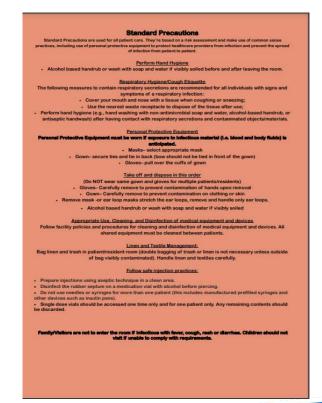

If there is a <u>means of transmission</u>, infection will spread to others.

Standard Precautions
Transmission-Based Precautions
Enhanced Barrier Precautions - NHs

STANDARD PRECAUTIONS

2007 Guideline for Isolation Precautions: Preventing Transmission of Infectious Agents in Healthcare Settings

Jane D. Siegel, MD; Emily Rhinehart, RN MPH CIC; Marguerite Jackson, PhD; Linda Chiarello, RN MS; the Healthcare Infection Control Practices Advisory Committee

Acknowledgement: The authors and HICPAC gratefully acknowledge Dr. Larry Strausbaugh for his many contributions and valued guidance in the preparation of this guideline.

Suggested citation: Siegel JD, Rhinehart E, Jackson M, Chiarello L, and the Healthcare Infection Control Practices Advisory Committee, 2007 Guideline for Isolation Precautions: Preventing Transmission of Infectious Agents in Healthcare Settings http://www.cdc.gov/ncidod/dhqp/pdf/isolation2007.pdf

Implementation of
Standard Precautions
constitutes the primary
strategy for the
prevention of
healthcare-associated
transmission of
infectious agents
among residents and
healthcare personnel

Define and explain standard precautions and their application during resident care activities

Appendix PP State Operations manual 8/24

HAND HYGIENE

➤ After touching blood, body fluids, secretions, excretions, contaminated items; immediately after removing gloves; between resident contacts.

➤ When hands are visibly dirty or contaminated with proteinaceous material or are visibly soiled with blood or other body fluids, wash hands with either a nonantimicrobial soap and water or an antimicrobial soap and water

How to hand wash

q

ALCOHOL BASED HAND RUB

- ➤ Put alcohol-based hand sanitizer with 60-95% alcohol in every resident room (ideally both inside and outside of the room) and other resident care and common areas (e.g., outside dining hall, in therapy gym).
- ➤ Unless hands are visibly soiled, an alcohol-based hand sanitizer is preferred over soap and water in most clinical situations.

HAND HYGIENE PROGRAM

ADDITIONAL ELEMENTS
CDC GUIDELINE FOR HAND HYGIENE IN HEALTHCARE SETTING

- ► Involve staff in evaluation and selection of hand hygiene products
- ► Provide employees with hand lotions/creams compatible with soap and/or ABHRs
- ▶ Do not wear artificial nails when providing direct clinical care
- ▶ Provide hand hygiene education to staff
- ► Monitor staff adherence to recommended HH practices

APPROACHES THAT SHOULD NOT BE CONSIDERED A ROUTINE PART OF HH

- ► Do not supply individual pocket-sized ABHS dispensers in lieu of accessible wall-mounted dispensers
- ▶ Do not refill or "top-off" soap dispensers, moisturizer dispensers or ABHS dispensers
- ▶ Do not use antimicrobial soaps formulated with triclosan
- ▶ Do not routinely double-glove
- ▶ Do not remove access to ABHS when responding to organisms such as *C. difficile* or norovirus
- ▶ Do not disinfect gloves during care

https://doi.org/10.1017/ice.2022.304

STANDARD PRECAUTIONS

Component	Recommendation	
Personal Protective Equipment (PPE)		
Gloves	For touching blood, body fluids, secretions, excretions, contaminated items; for touching mucous membranes and non-intact skin	
Gown	During procedures and resident-care activities when contact of clothing/exposed skin with blood/body fluids, secretions, and excretions is anticipated	
Mask, eye protection	During procedures and resident-care activities likely to generate splashes or sprays of blood, body fluids, secretions, especially suctioning, endotracheal intubation	

SPICE

USE OF PERSONAL PROTECTIVE EQUIPMENT (PPE)

- Perform and maintain an inventory of PPE – monitor daily PPE use
- Make necessary PPE available where resident care is provided
- Position trash can near the exit inside the room for disposal
- ► Implement strategies to optimize current PPE supply even before shortages occur

USE OF PERSONAL PROTECTIVE EQUIPMENT (PPE)

- ➤ Three overriding principals related to personal protective equipment (PPE)
 - Wear PPE when the nature of the anticipated resident interaction indicates that contact with blood or body fluids may occur
 - Prevent contamination of clothing and skin during the process of removing PPE
 - Before leaving the resident's room, remove and discard PPE –respirators removed after leaving

RESPIRATORS

- ► Healthcare providers who are in close contact with an LTCF resident with suspected or confirmed SARS-CoV-2 infection must use a NIOSH-approved N95 FFR or equivalent or higher-level respirator (29 CFR 1910.134)
 - ► This guidance is designed specifically for nursing homes, <u>assisted living facilities</u> and other LTCF (group homes with nursing care)
- Whenever respirators are required, employers must implement a written, worksite-specific respiratory protection program (RPP), including medical evaluation, fit testing, training, and other elements, as specified in OSHA's Respiratory Protection standard (29 CFR 1910.134).

https://www.osha.gov/sites/default/files/respiratory-protection-covid19-long-term-care.pdf https://www.osha.gov/sites/default/files/respiratory-protection-covid19-compliance.pdf

Occupational Safety and Health Administration

SAFE WORK PRACTICES (PPE USE)

- ✓ Keep hands away from face
- ✓ Work from clean to dirty
- Limit surfaces touched
- Change when torn or heavily contaminated
- Perform hand hygiene

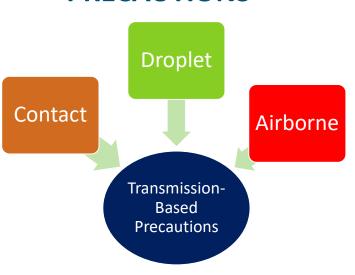

Component	Recommendation
Soiled equipment	Handle in a manner that prevents transfer of microorganisms to others and to the environment; wear gloves if visibly contaminated; perform hand hygiene
Environmental Control	Develop procedures for routine care, cleaning, and disinfection of environmental surfaces, especially frequently touched surfaces in resident-care areas
Laundry	Handle in a manner that prevents transfer of microorganisms to others and to the environment
Needles and sharps	Do not recap, bend, break, or hand-manipulate used needles; if recapping is required, use a one-handed scoop technique only; use safety features when available; place used sharps in puncture-resistant container
Resident Resuscitation	Use mouthpiece, resuscitation bag, other ventilation devices to prevent contact with mouth and oral secretions

Component	Recommendation
Resident placement	Prioritize for <u>single-resident room</u> if resident is at increased risk of transmission, is likely to contaminate the environment, does not maintain appropriate hygiene, or is at increased risk of acquiring infection or developing adverse outcome following infection.
Respiratory hygiene/cough etiquette (source containment of infectious respiratory secretions in symptomatic residents, beginning at initial point of encounter)	Instruct symptomatic persons to cover mouth/nose when sneezing/coughing; use tissues and dispose in no-touch receptacle; observe hand hygiene after soiling of hands with respiratory secretions; wear surgical mask if tolerated or maintain spatial separation, >3 feet if possible.

Component	Recommendation
Safe Injection Practices	 Apply to the use of needles, cannulas that replace needles, and, where applicable intravenous delivery systems Use aseptic technique Needles, cannulae and syringes are sterile, single-use items Use single-dose vials for parenteral medications whenever possible Do not administer medications form single-dose vials or ampules to multiple residents Do not keep multidose vials in the immediate resident treatment area Do not use bags or bottles of IV solution as a common source of supply for multiple residents
Special Lumbar Procedures	Wear a surgical mask when placing a catheter or injecting material into the spinal canal or subdural space

TRANSMISSION BASED PRECAUTIONS

Transmission-Based Precautions are for residents who are known or suspected to be infected or colonized with infectious agents, including certain epidemiologically important pathogens, and are used when the route(s) of transmission are not completely interrupted using Standard Precautions alone.

Define transmission-based precautions (i.e., contact precautions, droplet precautions, airborne precautions) and explain how and when they should be utilized, as consistent with accepted national standards.

Appendix PP State Operations manual 8/24

TRANSMISSION BASED PRECAUTIONS

- ► The facility should initiate transmission-based precautions for a constellation of new symptoms consistent with a communicable disease. Empirically initiated transmission-based precautions may be adjusted or discontinued when additional clinical information becomes available (e.g., confirmatory laboratory results).
- ► Residents on transmission-based precautions should remain in their rooms except for medically necessary care.
- Least restrictive possible

Appendix PP State Operations manual 8/24

TRANSMISSION BASED PRECAUTIONS

▶ Place signage that includes instructions for use of specific PPE in a conspicuous location outside the resident's room (e.g., on the door or on the wall next to the doorway), wing, or facility-wide. Additionally, either the CDC category of transmission-based precautions (e.g., contact, droplet, or airborne) or instructions to see the nurse before entering should be included in signage.

Appendix PP State Operations manual 8/24

CONTACT PRECAUTIONS

- ▶ Common conditions:
 - MRSA,
 - ► VRE,
 - ► CRE,
 - ► ESBL-GNR,
 - Candida auris,
 - ► Scabies,
 - Uncontained draining wounds or abscesses

- Private room if available
- Don gown and gloves when entering the room
- ▶ Disposable or dedicated equipment
- ► Transport residents in a fresh gown

CONTACT PRECAUTIONS

► Contact precautions should also be used in situations when a resident is experiencing wound drainage, fecal incontinence or diarrhea, or other discharges from the body that cannot be contained and suggest an increased potential for extensive environmental contamination and risk of transmission of a pathogen, even before a specific organism has been identified.

Appendix PP State Operations manual 8/24

CONTACT PRECAUTIONS

- ▶ Contact Precautions:
 - ▶ All residents with an MDRO when there is <u>acute diarrhea</u>, <u>draining</u> wounds or other sites of secretions/excretions that cannot be contained or covered
 - On units or in facilities where ongoing transmission is documented or suspected
 - ► C. *difficile* infection
 - Norovirus
 - ▶ Shingles when resident is immunocompromised, and vesicles cannot be covered
 - ► Other conditions as noted in Appendix A- Type and Duration of Precautions Recommended For Selected Infections and Conditions
- Gown and gloves upon ANY room entry
- ▶ Room restriction except for medically necessary care

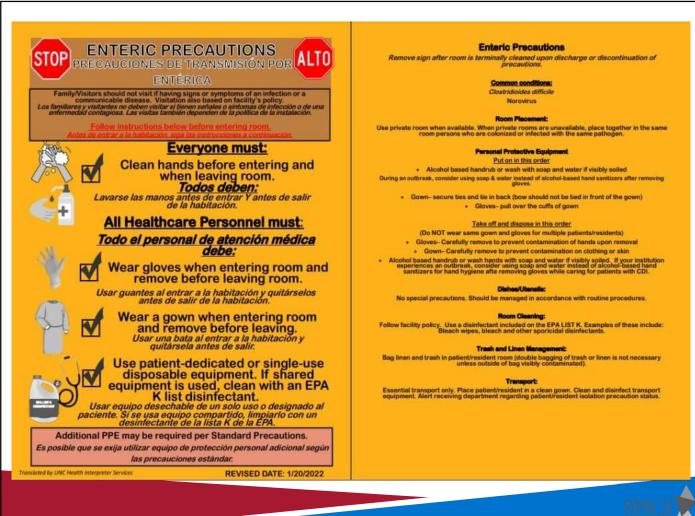

SPICE

ENTERIC PRECAUTIONS

- ▶ Common conditions:
 - ► Clostridioides difficile,
 - ► Norovirus,
 - Rotovirus
- ► USE ABHR for routine care.
- During an outbreak, HCP should consider using soap & water routinely

- Private room if possible
- ► Gown and gloves
- Disposable or dedicated equipment
- ► Use EPA agent from the K list of disinfectants: Dilute Bleach, sporicidal disinfectants.

DROPLET PRECAUTIONS

Applies when <u>respiratory droplets</u> contain pathogens which may be spread to another susceptible individual

- ► Common conditions:
 - Pertussis,
 - ► Influenza,
 - Rhinovirus,
 - Neisseria meningitides,
 - Mumps,
 - ► Rubella,
 - Parvovirus B19

- Surgical or procedure mask upon entering the room
- Private room when available
- ► Transport resident in a medical grade mask.

https://www.cdc.gov/flu/professionals/diagnosis/testing-management-considerations-nursinghomes.htm

Family/Visitors should not visit if having signs or symptoms of an infection or a communicable disease. Visitation also based on facility's policy.

Los familiares y visitantes no deben visitar si tienen seriales o sintomas de infección o de una enfermedad contagiosa. Las visitas también dependen de la politica de la instalación.

Follow instructions below before entering room.

Everyone must:

Clean hands before entering and when leaving room.

Todos deben:

Lavarse las manos antes de entrar y al salir de la habitación.

Wear surgical/procedure mask when entering the room and remove after exiting the room.

Usar una mascarilla quirúrgica o para procedimientos al entrar a la habitación y quitársela después de salir de la habitación.

Additional PPE may be required per Standard Precautions. Es posible que se exija equipo de protección personal adicional según las precauciones estándar.

REVISED DATE: 1/20/2022

Droplet Precautions

for patients in multi-bed rooms with infections transmitted by the droplet route

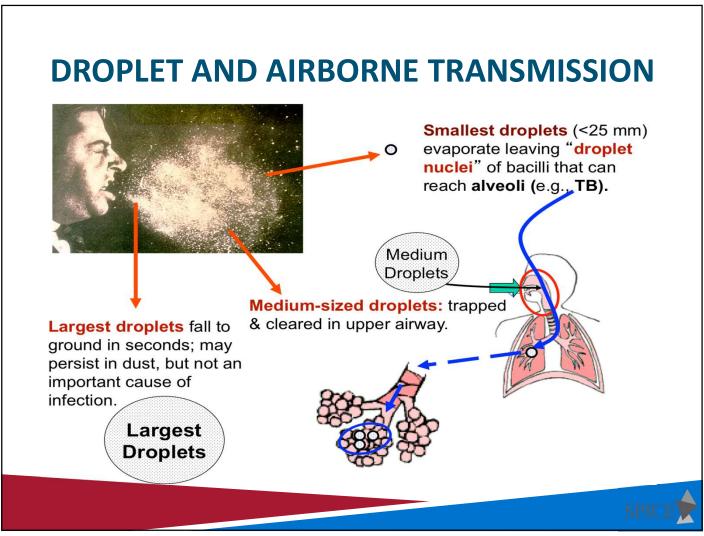

- Take off and dispose in this order
 asp front of the mask when removing. Grasp bottom ties then the ties at top and
 face. For ear loop masks stretch the ear loops, remove, and handle only ear

Trash and Linen Management:

Bag linen and trash in patient/resident room (double bagging of trash or linen is not necessary unless outside of bag visibly contaminated).

Duration of Precautions:
rguidance for duration of precautions, follow Appendix A-Type and Duration of Precautions Recmended for Selected Infections and Conditions within the CDC's 2007 Guideline for Isolation Precautions: Preventing Transmission of Infectious Agents in Healthcare Settings

AIRBORNE PRECAUTIONS

Occurs when pathogens are so small, they can easily be dispersed in the air over long distances by air currents.

- Common conditions:
 - Tuberculosis,
 - ➤ Measles

Private room only

Room requires Negative airflow pressure

Doors must remain closed

Everyone must wear an N-95 respirator

Limit the movement and transport of the Resident

Hand hygiene before and after

TUBERCULOSIS

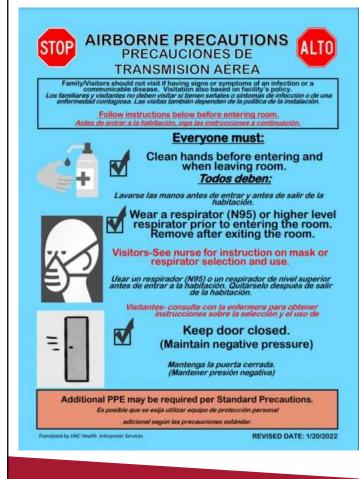

Facility does not have a dedicated negative pressure room:

- Transfer resident to a facility capable of managing and evaluating resident
- ▶ Place a mask on the resident (if tolerated), place in room with door closed pending transport
- ▶ Be sure policy is included in your plan

Facility does have negative pressure room:

▶ Follow Airborne Precautions

Airborne Precautions

move sign after room is terminally cleaned upon discharge or discontinual precautions.

on conditions (per CDC guidelines) Mycobacteria tuberculosis (TB)

Room Placement:

Preferred placement for patients who require Airborne Precautions is in an airborne infection isolation room (AIIR). An AIIR is a single-patient room that is equipped with special air handling and ventilation capacity that meet the Facility Guidelines Institute (FGI) standards for AIIR. In setting where Airborne Precautions cannot be implemented due to limited engineering resources (e.g., physician offices), masking the patient, placing the patient in a private room (e.g., office examination room) with the door closed, and providing N95 or higher level respirators or masks if respirators are not available for healthcare personnel will reduce the likelihood of airborne transmission until the patient is either transferred to a facility with an AIIR or returned to the home environment, as deemed medically appropriate.

- Personal Protective Equipment
 Put on in this order
 Alcohol based handrub or wash with soap and water if visibly soiled
 Fit tested NIOSH approved respirator (NIS) or higher level respirator
 Healthcare worker must be fit tested for respirator and visitors should see nurse for proper use

- Take off and dispose in this order

 N95 respirator- Do NOT grasp front of the respirator. Grasp bottom elastics then the ones at the
 - . Alcohol based handrub or wash hands with soap and water if visibly soiled

Dishes/Utensils:

No special precautions. Should be managed in accordance with routine procedures.

Room Cleaning:
Follow facility policy for Airborne Precautions. When in doubt keep sign on door and room closed for one hour to allow room air to circulate and filter.

Tresh and Linen Management:

Bag linen and trash in patient room (double bagging of trash or linen is not necessary unless outside of bag _visibly contaminated).

Transport:

Essential transport only, Place patient in a medical grade mask. Clean and disinfect transport equipment. Alert receiving department regarding patient/resident isolation precaution status.

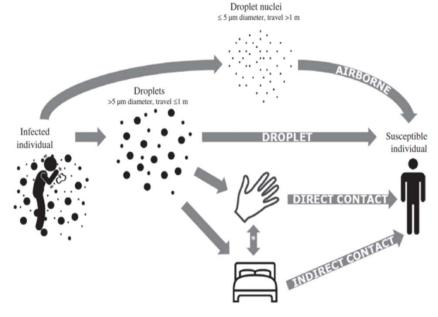

Ouration of Precautions:

For guidance for duration of precautions, follow Appendix A-Type and Duration of Precautions Recommended for Selected Infections and Conditions within the CDC's 2007 Guideline for Isolation Precautions: Preventing Transmission of Infectious Agents in Healthcare Settings

TRANSMISSION-BASED PRECAUTIONS

- ► Combinations of precautions may be necessary based on the pathogen:
 - **▶** Droplet plus Contact
 - ► Airborne plus Contact

* Transmission routes involving a combination of hand & surface = indirect contact.

1Proceianoy RS, et al. J Pediatr (Rio J) 2002;11 April; 2 Almendros A, et al. Vet Rec 2020;4; 3Chin AWH, et al David Weber: Associate Chief Medical Officer, UNC Hospitals; Medical Director, Hospital Epidemiology:

COVID-19 (SARS Co-V-2) Update

AIRBORNE CONTACT PRECAUTIONS

- ► Common conditions:
 - ► Chicken Pox
 - Disseminated Shingles
 - ► Smallpox
 - Extrapulmonary tuberculosis (draining lesions)
- ► AIIR- single-resident room with special air handling and ventilation capacity that meet the Facility Guidelines Institute (FGI) standards.

- ▶ N95 or higher respirator
- Essential transport only, with resident wearing a medical grade mask
- Upon discharge allow at least one hour for air to circulate

1. Airborne Contaminant Removal

Table B.1. Air changes/hour (ACH) and time required for airborne-contaminant removal by efficiency *

ACH § ¶	Time (mins.) required for removal 99% efficiency	Time (mins.) required for removal 99.9% efficiency
2	138	207
4	69	104
6+	46	69
8	35	52
10⁺	28	41
12 ⁺	23	35
15+	18	28
20	14	21
50	6	8

^{*} This table is revised from Table S3-1 in reference 4 and has been adapted from the formula for the rate of purging airborne contaminants presented in reference 1435.

https://www.cdc.gov/infectioncontrol/guidelines/environmental/appendix/air.html#b1

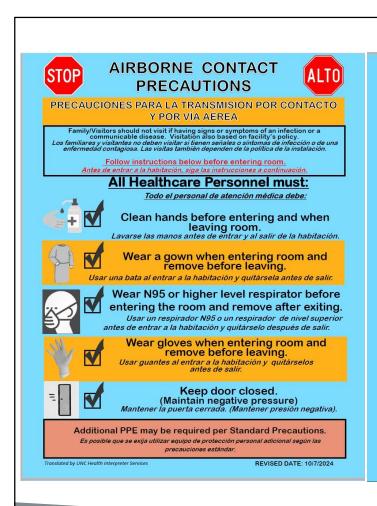

CHICKENPOX AND SHINGLES

Disease/Condition	Type and Duration of Isolation	
Chickenpox (varicella)	Airborne and Contact until lesions are dry and crusted	
Shingles (Herpes zoster. Varicella zoster)		
Localize in resident with intact immune system with lesions that can be contained/covered	Standard Precautions	
Disseminated disease in any resident	Airborne and Contact precautions for duration of illness	
Localized disease in immunocompromised resident until disseminated infection ruled out	Airborne and Contact precautions for duration of illness	

Non-immune healthcare personnel should not care for residents with Chickenpox or Shingles

Airborne Contact Precautions Remove sign after room is terminally cleaned upon discharge or discontinuation of precautions Common conditions (per CDC guidelines)
Chicken Pox Disseminated Shingles Smallpox Extrapulmonary tuberculosis (draining lesions) Personal Protective Equipment: Put on in this order Alcohol based handrub or wash with soap and water if visibly soiled
 Gown
 Fit tested NIOSH approved respirator (N95) or higher level respirator
Healthcare worker must be fit tested for respirator and visitors should see nurse for proper use.
 Gloves Take off and dispose in this order Gloves
 Gown- Unfasten gown ties, taking care that sleeves don't contact your body when reaching for ties . Pull gown away from neck and shoulders, touching inside of gown only. N95 respirator- Do NOT grasp front of respirator. Grasp bottom elastics then the ones at the top.

Alcohol based handrub or wash hands with soap and water if visibly soiled. Dishes/Utensils:

No special precautions. Should be managed in accordance with routine procedures. Room Cleaning: Follow facility policy for Airborne Contact Precautions Trash and Linen Management: Bag linen and trash in patient room (double bagging of trash or linen is not necessary unless outside of bag visibly contaminated). Transport:

Essential transport only. Place patient in a medical grade mask. Clean and disinfect transport equipment. Alert receiving department regarding patient isolation precaution status. Duration of Precautions:

For guidance for duration of precautions, follow Appendix A- Type and Duration of Precautions ecommended for Selected Infections and Conditions within the CDC's 2007 Guideline for Isolation Precautions: Preventing Transmission of Infectious Agents in Healthcare Settings

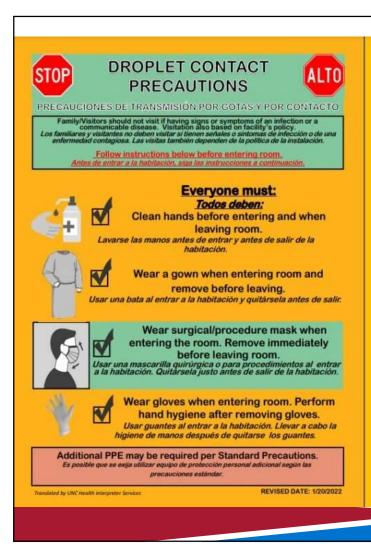

DROPLET CONTACT PRECAUTIONS

- ► Common conditions:
 - Rhinovirus if associated with copious secretions,
 - Invasive group A streptococcal infection associated with soft tissue involvement
 - Certain coronaviruses
 - RSV (infants and young children)

- Private room when available or keep >3 spatial separation
- Surgical or procedure mask when entering room
- Gown and gloves on room entry and remove when leaving room
- Essential transport with resident/resident in a medical grade mask and clean gown

Droplet Contact Precautions

- · Alcohol based handrub or wash with soap and water if visibly soiled

No special precautions. Should be managed in accordance with routine procedures.

Room and Equipment Cleaning:
Follow facility policy for Droplet Contact Precautions for room cleaning. Use patient-dedicated or ent. If shared equipment is used, clean and disinfect between patients

Tresh and Unen Management:
Bag linen and trash in patient/resident room (double bagging of trash or linen is not necessary

SPECIAL DROPLET CONTACT PRECAUTIONS

- ► Common conditions:
 - ► SARS,
 - ► SAR-CoV-2 (COVID-19)
 - Mpox
- Private room with door closed unless fall risk.
- ➤ AIIR- single-resident room with special air handling and ventilation capacity that meet the Facility Guidelines Institute (FGI) standards when performing AGPS

- ► Fit tested N95 or higher respirator
- ► Protective eyewear
- ► Gown and gloves
- Essential transport only with residentresident wearing a medical grade mask

VIRAL RESPIRATORY PATHOGENS TOOLKIT FOR NURSING HOMES

PREPARE

- Vaccinate
- Allocate resources
- Monitor and Mask
- Educate
- Ventilate
- Test and treat

RESPOND

- TBP based on pathogen
- Remain in room
- Physical distancing and face mask if outside room
- PPE based on TBP
- Non-punitive sick leave policies for HCP
- Test if symptomatic
- Treat
- Investigate

CONTROL

- Notify the local/state PHD
- Initial attempts
- Additional measures

https://www.cdc.gov/longtermcare/prevention/viral-respiratory-toolkit.html

WHEN TO DISCONTINUE TBP PRECAUTIONS

- ► Resume Standard Precautions once high-risk exposures or active symptoms have discontinued
 - ▶ Refer to Appendix A in the 2007 Isolation Guidelines-updated 2018

Type and Duration of Precautions Recommended for Selected Infections and Conditions¹

Guideline for Isolation Precautions: Preventing Transmission of Infectious Agents in Healthcare Settings (2007)

Appendix A Updates [September 2018]

Changes: Updates and clarifications made to the table in Appendix A: Type and Duration of Precautions Recommended for Selected Infections and Conditions.

A B C D E F G H I J K L M N Q P Q R S T U V W Y Z

A

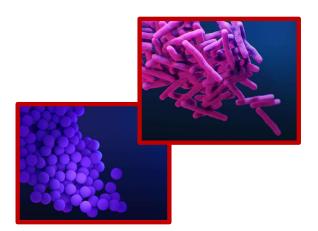

Infection/Condition	Type of Precaution	Duration of Precaution	Precautions/Comments
Abscess Draining, major	Contact + Standard	Duration of illness	Until drainage stops or can be contained by dressing.

MULTIDRUG RESISTANT ORGANISMS

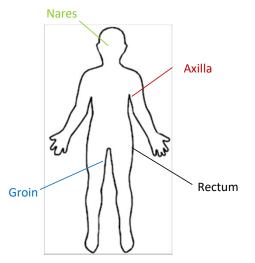

- MDRO- Organisms that develop resistance to one or more classes of antibiotics. This may result in typical antibiotic regimens not working or becoming less effective.
- ► Cause infections and/or colonization
- ▶ Infections caused by MDROs are:
 - ► More difficult to treat
 - Require more toxic antibiotics to treat
 - Often have poor resident outcomes
 - Are easily transmitted in healthcare settings

COLONIZATION VS INFECTION

- ► MDRO colonization can persist for long periods of time (e.g., months) and result in silent transmission.
- Common colonization sites for MDROs include:
 - Nares
 - Axilla
 - ► Groin
 - ► Rectum

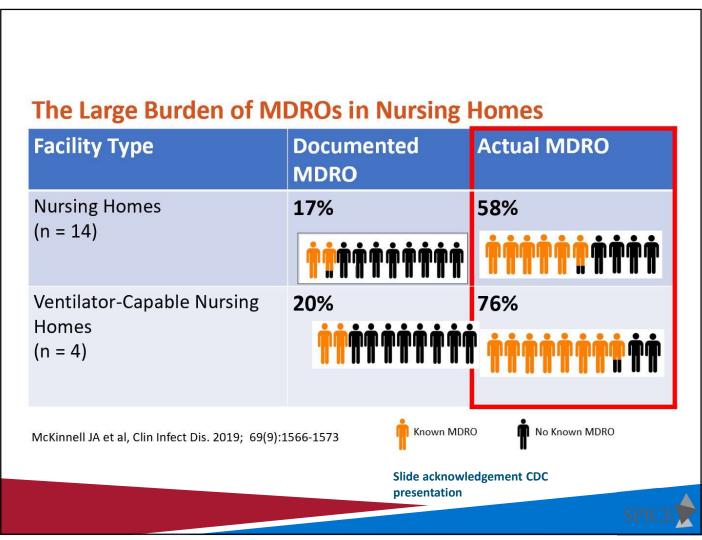

RISK FACTORS FOR DEVELOPING A MDRO

- Duration of hospitalization
- High rates of transfer in and between hospitals
- ▶ Local institution risk factors
- Long term care facilities
- Intensive care units
- ► High rate of device utilization
- **▶** Colonization
- ▶ Prior antibiotic use

"Age, comorbid illnesses, invasive medical devices, and dependence on setting of communal living, all nursing home residents infected with healthcare, acquired bacterial pathogens."

- Residents in nursing homes are at increased risk of becoming colonized and developing infections with multidrug-resistant organisms (MDROs)
- S. aureus and MDRO colonization prevalence among residents in skilled nursing homes is estimated at greater than 50%, with new acquisitions occurring frequently
- Implicated in outbreaks
- Invasive devices and wounds increase risk for colonization and/or acquisition
- ► Transmission via healthcare personnel hands, or clothing

https://www.cdc.gov/hicpac/workgroup/EnhancedBarrierPrecautions.html

BACKGROUND

- ► Available evidence suggests routine use of EBP for residents with wounds or indwelling medical devices would reduce the transmission of *S. aureus* and MDROs (a randomized clinical trial¹).
- ► Quasi-experimental study² routine use of EBP during high-risk care of residents with wounds or indwelling devices reduced acquisition and transmission of both methicillin-susceptible and methicillin-resistant S. aureus

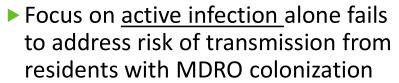

¹Mody L, Krein SL, Saint S, et al. A Targeted Infection Prevention Intervention in Nursing Home Residents with Indwelling Devices: A Randomized Clinical Trial. JAMA Internal Medicine 2015;175:714-23

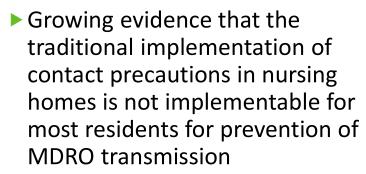

²Lydecker AD, Osei PA, Pineles L, et al. Targeted Gown and Glove Use to Prevent Staphylococcus aureus Acquisition in Community-Based Nursing Homes: A Pilot Study. Infection Control & Hospital Epidemiology 2020:1-7.

CHALLENGES

Implementation of Personal Protective Equipment (PPE) Use in Nursing Homes to Prevent Spread of Multidrug-resistant Organisms (MDROs)

Print version: <u>Implementation of PPE in Nursing Homes to Prevent Spread of MDROs</u> [PDF – 7 pages]

Summary of Recent Changes:

- Added additional rationale for the use of Enhanced Barrier Precautions (EBP) in nursing homes, including the high prevalence of multidrugresistant organism (MDRO) colonization among residents in this setting.
- Expanded residents for whom EBP applies to include any resident with an indwelling medical device or wound (regardless of MDRO colonization or infection status).
- Expanded MDROs for which EBP applies.
- Clarified that, in the majority of situations, EBP are to be continued for the duration of a resident's admission.

SUBJECT: Enhanced Barrier Precautions in Nursing Homes

MDROs TARGETED BY CDC

- ► Pan-resistant organisms:
 - Resistant to all current antibacterial agents (for example: Acinetobacter, Klebsiella pneumonia, pseudomonas aeruginosa)
- Carbapenemase-producing Enterobacterales
- Carbapenemase-producing Pseudomonas spp.
- ► Carbapenemase-producing Acinetobacter baumannii and
- ► Candida auris

ADDITIONAL EPIDEMIOLOGICALLY IMPORTANT MDROs

- Methicillin-resistant Staphylococcus aureus (MRSA),
- ► ESBL-producing Enterobacterales,
- Vancomycin-resistant Enterococci (VRE),
- Multidrug-resistant Pseudomonas aeruginosa,
- Drug-resistant Streptococcus pneumoniae

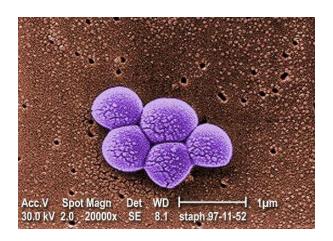

Photo credit: Public Health Image Library (PHIL)

Facility has discretion for MDROs not targeted by CDC

ENHANCED BARRIER PRECAUTIONS CDC AND CMS

- ► Applies to *ALL* residents with *ANY of the following:*
 - ► Infection <u>OR</u> colonization with a <u>MDRO</u> when <u>Contact Precautions do not apply</u>
 - ▶ Wounds and/or indwelling medical devices (e.g., central lines, urinary catheter, feeding tube, tracheostomy/ventilator) **REGARDLESS** of MDRO colonization status and **regardless of wherever they reside in the facility**
- ► Gown and gloves prior to the high contact care activity (cannot reuse gown, must change between residents)
 - ▶ Additional PPE (i.e., eye protection) based standard precautions.
- ► No room restriction and not restricted or limited from participation in group activities

IMPLEMENTATION STRATEGIES

- ► CMS and CDC: Facility has clear expectations for staff related to hand hygiene, gown/glove use, initial and ongoing training and access to appropriate supplies
 - ► PPE and ABHR available
 - ► Communication with staff
 - ▶ Facilities with rooms containing multiple residents should provide staff with training and resources to ensure that they change their gown and gloves and perform hand hygiene in between care of residents in the same room.
 - ▶ Periodic monitoring and assessment of adherence to practice
 - Educate residents and visitors

Other recommended practices-environmental cleaning and cleaning and disinfection resident care equipment

ENHANCED BARRIER PRECAUTIONS CDC AND CMS

- ► Examples of <u>high-contact</u> resident care activities <u>requiring</u> gown and glove use:
 - Dressing
 - Bathing/showering
 - ▶ Transferring
 - Providing hygiene (brushing teeth, combing hair, and shaving) primarily bundled with am or pm care
 - Changing linens
 - Changing briefs or assisting with toileting
 - Device care or use; central line, urinary catheter, feeding tube, tracheostomy/ventilator
 - Wound care: any skin opening requiring a dressing

INDWELLING MEDICAL DEVICES CDC AND CMS

► CDC

 Examples of indwelling medical devices include central line, urinary catheter, feeding tube, and tracheostomy/ventilator;

► CMS

▶ Indwelling medical device examples include central lines, urinary catheters, feeding tubes, and tracheostomies. A peripheral intravenous line (not a peripherally inserted central catheter) is not considered an indwelling medical device for the purpose of EBP.

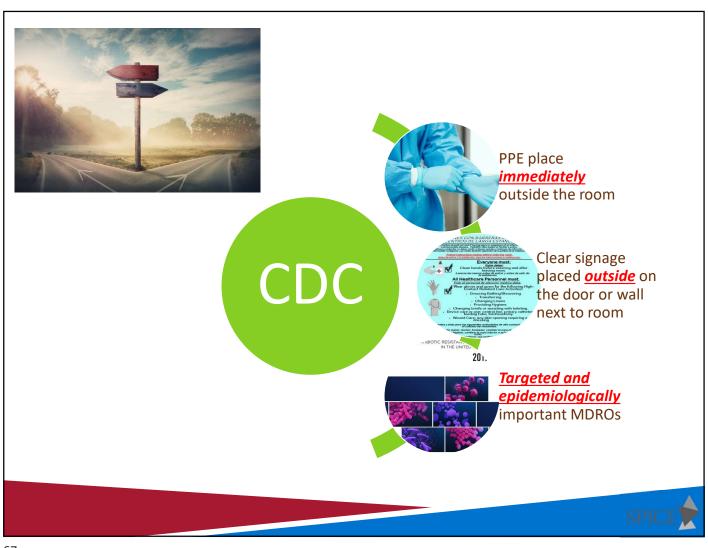

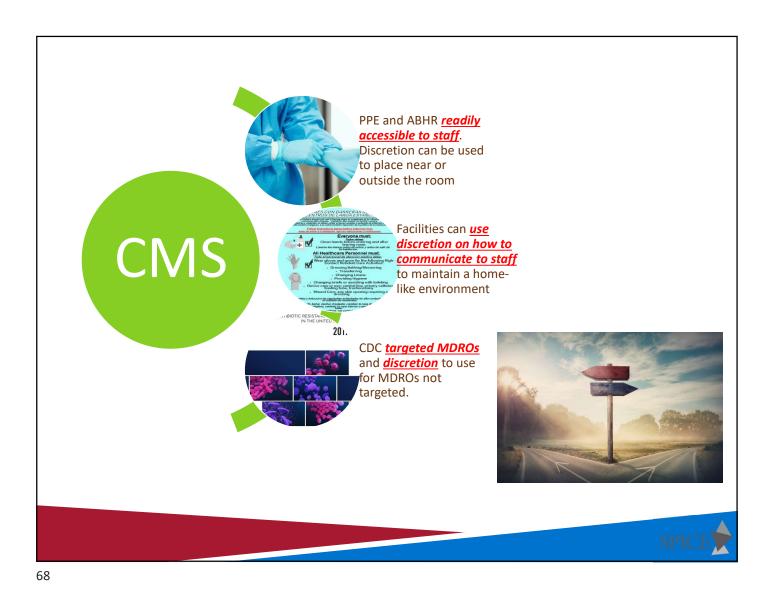

WOUNDS CDC AND CMS

- ► CDC
 - Any skin opening requiring a dressing
- ► CMS and CDC
 - Wounds generally include chronic wounds, not shorter-lasting wounds, such as skin breaks or skin tears covered with an adhesive bandage (e.g., Band-Aid®) or similar dressing. Examples of chronic wounds include, but are not limited to, pressure ulcers, diabetic foot ulcers, unhealed surgical wounds, and venous stasis ulcers.

SHARED ROOMS

- When residents are placed in shared rooms, facilities must implement strategies to help minimize transmission of pathogens between roommates including:
 - maintaining spatial separation of at least 3 feet between beds to reduce opportunities for inadvertent sharing of items between the residents,
 - use of privacy curtains to limit direct contact,
 - cleaning and disinfecting any shared reusable equipment,
 - cleaning and disinfecting environmental surfaces on a more frequent schedule, and
 - changing personal protective equipment (if worn) and performing hand hygiene when switching care from one roommate to another.

DURATION OF EBPS CDC AND CMS

- Because Enhanced Barrier Precautions do not impose the same activity and room placement restrictions as Contact Precautions, they are intended to be in place:
 - ► For the duration of a resident's stay in the facility or
 - Until resolution of the wound or discontinuation of the indwelling medical device that placed them at higher risk

CONSIDERATIONS DURING SHORTAGES OF GOWNS OR GLOVES-CDC

- ▶ When PPE supply chains are strained during extraordinary circumstances such as the COVID-19 pandemic, facilities may encounter shortages of gowns or gloves.
- ► <u>Neither extended use nor reuse of gowns and gloves is</u> recommended for mitigating shortages in the context of EBP.
- ▶ To optimize PPE supply, facilities can consider substituting disposable gowns with washable cloth isolation gowns that have long sleeves with cuffs.
- ▶ Healthcare personnel can reduce PPE consumption by bundling multiple care activities in the same resident interaction.

https://www.cdc.gov/hicpac/pdf/EnhancedBarrierPrecautions-H-pdf

MULTIDRUG-RESISTANT ORGANISM (MDRO) TOOLKIT FOR LONG-TERM CARE FACILITIES

▶ Introduction:

"Antimicrobial resistance is a major threat to public health. The Centers for Disease Control and Prevention (CDC) estimates that 2.8 million people in the United States every year get infections that are resistant to antimicrobials(drugs that treat infections caused by bacteria or fungi), and at least 35,000 people die as a result.

Organisms that are resistant to multiple classes of antimicrobial drugs are referred to as multidrug-resistant organisms (MDROs).

Infections with MDROs can be difficult to treat and can be much more dangerous than infections with non-resistant strains of the same organism. Patients with prolonged health care stays, exposure to antimicrobial drugs, and other risk factors such as wounds or indwelling medical devices are at the highest risk for MDRO colonization and infection.

https://epi.dph.ncdhhs.gov/cd/docs/MDROToolkit.pdf

NEUTROPENIC PRECAUTIONS

- ► Absolute neutrophil count (ANC) < 1500 or AMC expected to decrease to <500 over next 48 hours
- ▶ Private room if available
- ► Routine room cleaning

- Avoid raw or undercooked fruits, eggs, vegetables, or shellfish or cracked pepper
- ► No live flowers or plants
- ► No staff or visitors' entry if ill
- Surgical mask if leaving room

NEUTROPENIC PRECAUTIONS

Not included in CDC's Guidelines for Isolation Precautions

PRECAUCIONES NEUTROPENICAS

Family/Visitors should not visit if having signs or symptoms of an infection or a communicable disease. Visitation also based on facility's policy. Los familiares y visitantes no debor visitars it there resirales o sintomes de infección o de una enfermedad contagiosa. Las visitas tambien dependen de la politica de la instalación.

Follow instructions below before entering room.

Everyone must:

Todos deben:

Clean hands before entering and when

leaving room. Lavarse las manos antes de entrar y antes de salir de la habitación.

Avoid raw or under cooked fruits or vegetables; raw or undercooked eggs or shellfish

Evitar las frutas y verduras crudas o poco cocidas; los huevos o mariscos crudos o poco cocidos.

No live flowers or plants.

No se permiten flores ni plantas vivas.

Do not enter if feeling unwell.

No entre si está enfermo.

Additional PPE may be required per Standard Precautions. Es posible que se exija utilizar equipo de protección personal adicional según las precauciones estándar.

Neutropenic Precautions

Neutropenia — The definition of neutropenia varies from institution to institution, but neutropenia is usually defined as an absolute neutrophil count (ANC) <1500 or 1000 cells/microL and severe neutropenia as an ANC <500 cells/microL or an ANC that is expected to decrease to <500 cells/microL over the next 48 hours [2,3]. Profound neutropenia is defined as an ANC <100 cells/microL. The risk of clinically important infection rises as the neutrophil count falls below 500 cells/microL and is higher in those with a prolonged duration of neutropenia (>7 days).

Room Placement: Use private room when available

Disher/Utenails:

No special precautions, Should be managed in accordance with routine procedures.

Follow facility policy for Neutropenic Precautions

Trash and Linen Management:
Beg linen and trash in patient/resident room (double bagging of trash or linen is not necessary unless outside of bag visibly conta

Transport

Essential transport only. Place patient/resident in a medical grade mask. Clean and disinfect transport equipment. Alert receiving department regarding patient/resident isolation precaution status.

Other Special Precautions:

No live flowers or plants.
Do not enter if feeling unwell.
Avoid fresh uncooked fruits and vegetables (cooked fruits and vegetables (rouse fruits and vegetables) (rouse fruits and vegetables).

SUMMARY

- Standard precautions are the primary strategy to interrupt transmission of infectious agents in healthcare facilities
 - ▶ HH,PPE, Respiratory Hygiene, Cleaning of Equipment and Environment
- ► Transmission-based precautions may also need to be implemented based on the type of infection and how it is transmitted
 - Contact, Droplet, Airborne and a combination of these
- ► Enhanced Barrier Precautions recommended by CDC and required by CMS to prevent transmission of MDROs in nursing homes.
