Long-term Care Environment

- Long-term care (LTC) generally refers to the large range of facilities that provide care to individual(s) unable to achieve independent self or assisted care:
 - Nursing home
 - Skilled nursing and
 - Assisted living facilities
- Encompasses medical, physical, and psychosocial care
- Typically serve as the resident's home

Nursing Homes

- Changed significantly over the past several decades
 - Government regulation and consumer pressure
 - Highly regulated
 - Increased acuity of residents
 - Medical needs more complex

"The problem is that nursing homes *still operate on antiquated assumptions made decades ago about the complexity of care their residents require.* Previously, older adults populated nursing homes primarily for custodial care and needed little in the way of medical intervention.

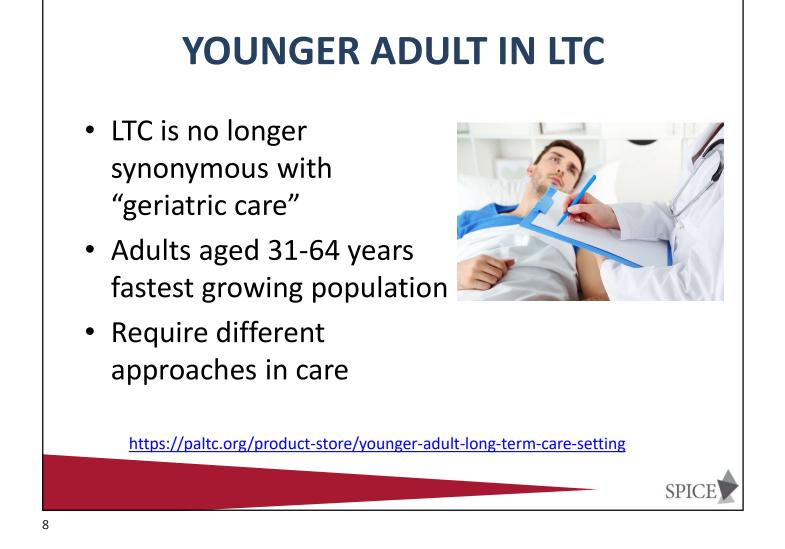

Scientific advances have introduced treatments for illnesses that previously were synonymous with death but now can be managed with medicine and therapies.

As a result, those who wind up in nursing homes—many after typically brief hospital stays—are extraordinarily frail, with multiple underlying conditions that demand elaborate medication regimens. "

"there is a notable rise in young patients bringing unique challenges. They are disabled by neurological disorders, trauma, or drug abuse, some have myriad afflictions from birth. younger adults are estimated to be the fastest-growing subpopulation in post-acute and long-term care, increasing <u>16.5 percent</u>."

			SPICE

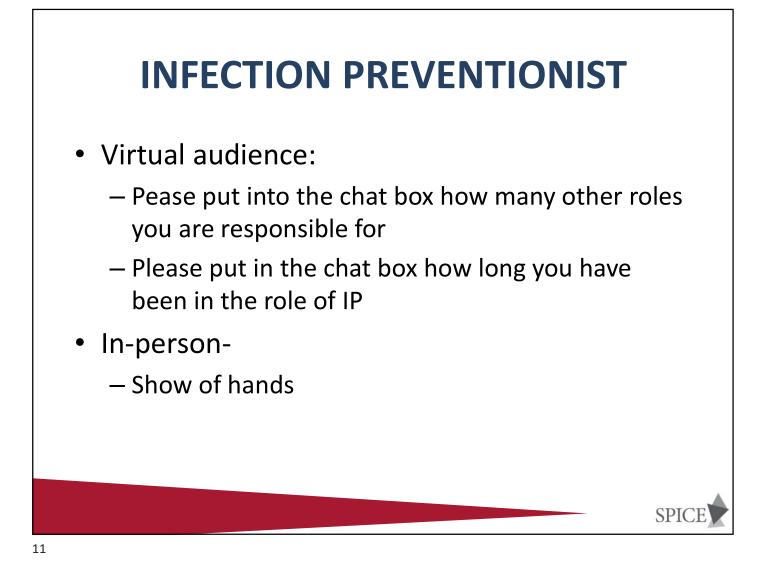

INFECTION PREVENTION PROGRAMS

- Infection Prevention and Control (IPC) programs are inadequately staffed, as much as four-fold less than their acute care hospital counterparts
- > IPs wear multiple hats
- Less than 10% have specialized training
- Difference in social environment
- Populations in LTCFs are heterogeneous

IP spend less than a third of their time on IP work; only 40% have specialized training; and less than 10% are certified ...3/29/23

Council of State and Territorial Epidemiologists (CSTE): Recommendations for Surveillance and Reporting of Healthcare-Associated Infections in Long Term Care Facilities

<section-header><text><text><text><text>

AHCA Files Lawsuit Against Federal Staffing Mandate Nursing home associations and providers ask court to vacate minimum staffing rule that would reduce access to long term care

WASHINGTON, D.C. – The American Health Care Association (AHCA), joined by the Texas Health Care Association (THCA) and several Texas long term care facilities filed a lawsuit late Thursday in the Northern District of Texas against the U.S. Department of Health and Human Services (HHS) and the Centers for Medicare and Medicaid Services (CMS) for exceeding their statutory authority and arbitrarily and capriciously issuing the Minimum Staffing Standards for Long-Term Care Facilities final rule. The lawsuit asks the court to issue an order and judgment setting aside the new staffing requirements that were finalized by CMS on May 10.

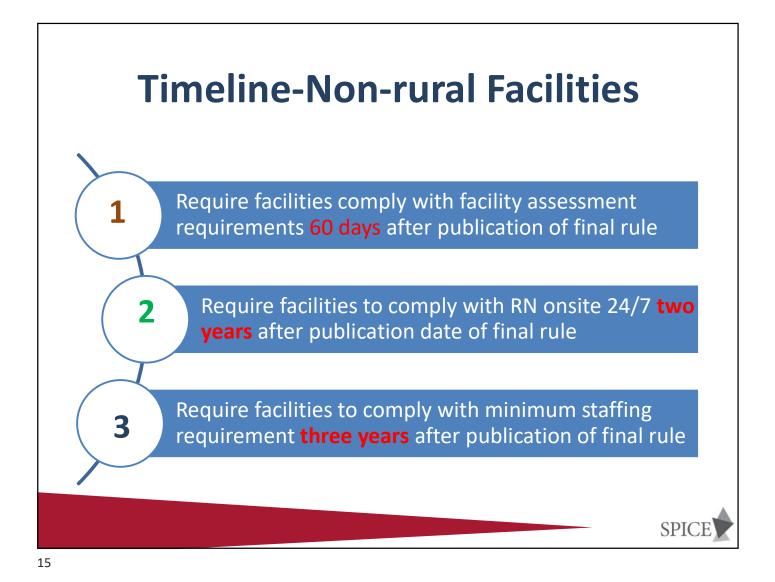

June 18, 2024, Washington, DC — Following <u>its early June decision</u> to file to join the American Health Care Association's (AHCA) lawsuit against the Department of Health and Human Services (HHS) and the Centers for Medicare and Medicaid Services (CMS), LeadingAge, the association of nonprofit providers of aging services, including nursing homes, today announces its official co-plaintiff status.

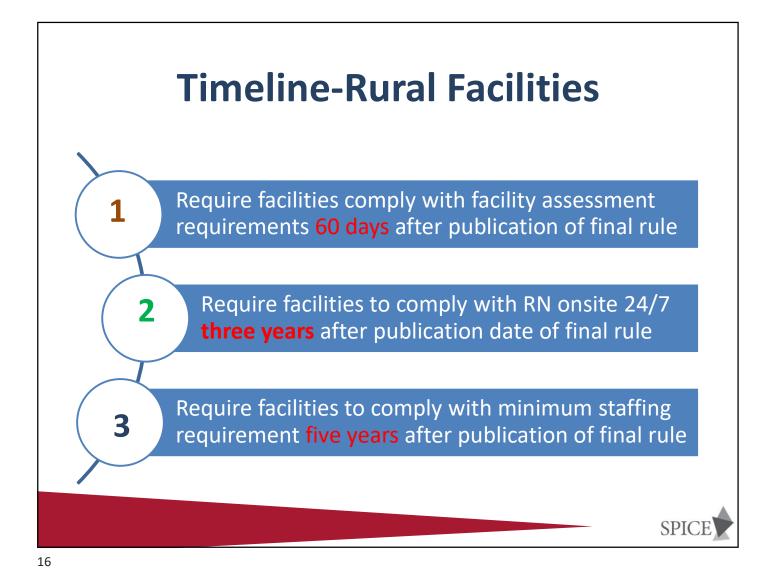

SPI

- Minimum nurse staffing standards of 0.55 hours per resident day (HPRD) for RNs and 2.45 HPRD for Nurses Aides (NAs);
- 2. Requirement to have an RN onsite 24 hours a day, seven days a week; and
- 3. Enhanced Facility Assessment

Includes staggered implementation schedule and possible hardship exemption

Permitting Regulatory Flexibility

- LTC facilities may qualify for a temporary hardship exemption from the minimum nurse staffing HPRD standards only if they are able to meet specific criteria demonstrating the following:
 - Workforce unavailability based on location
 - Demonstrate good faith efforts to hire and retain staff
 - A financial commitment to staffing

CMS officials are looking to finalize the nursing home minimum staffing proposal in 2024

Takeaway Points

- Among all nursing facilities, fewer than 1 in 5 could currently meet the required number of hours for registered nurses and nurse aides, which means over 80% of facilities would need to hire nursing staff.
- 90% of for-profit facilities would need to hire additional nursing staff compared with 60% of non-profit and government facilities.
- The percentage of nursing facilities that would meet the requirements in the proposed rule varies from all in Alaska (100%) to nearly none in Louisiana (1%).

https://www.kff.org/medicaid/issue-brief/what-share-of-nursing-facilities-might-meetproposed-new-requirements-for-nursing-staff-hours/

INFECTION PREVENTION CHALLENGES

- Never been required to deal with emerging infectious diseases
- Regulatory oversight -Isolation should be the least restrictive possible (CMS)
 - PPE used much less frequently
 - Education/monitoring absent or inadequate

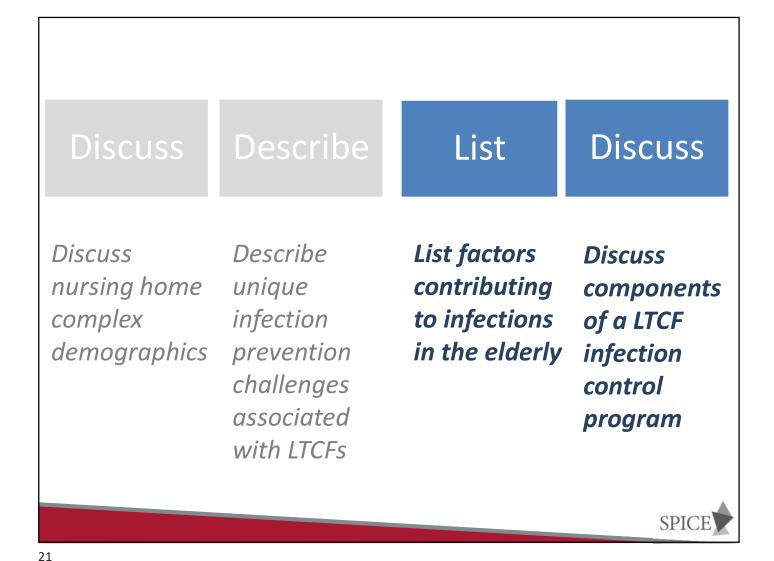

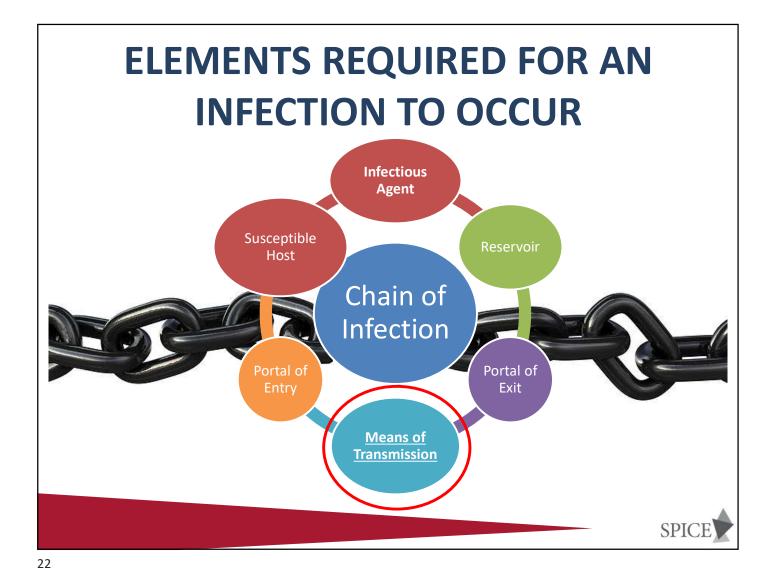

- The results indicated a need for more *clinical guidelines and public policies* designed to bolster providers' limited resources including ensuring that nursing homes have enough funding to address IPC concerns, study authors said.
- A <u>major part</u> of the struggle for providers is the **ongoing staffing shortage** since IPC measures can be labor-intensive and time-consuming.
- Vaccine hesitancy among both staff and residents contributed to high infection rates.
- Supply chain issues
- "Policies should ensure ongoing preparedness and oversight that supports NHs
 organizational readiness to deal with future pandemics." "This includes *support* for
 facility renovations, education and IPC resources such as PPE supplies, testing kits,
 vaccinations, and other supplies. Additionally, there's a need for innovative
 approaches to recruit and support the NH workforce."

<u>Conclusions and Implications</u>: Our findings indicate that nursing homes may need more resources to prevent citations for infection prevention and control.

SPIC

HEALTHCARE- ASSOCIATED INFECTIONS (HAI)

- Limited data
- 1 3 million serious infections annually
- Infections include:
 - UTI, diarrheal disease, antibioticresistant staph infection and others
- Major cause of hospitalization
- 380,000 die of infections in LTCFs annually

HEALTHCARE- ASSOCIATED INFECTIONS (HAI)

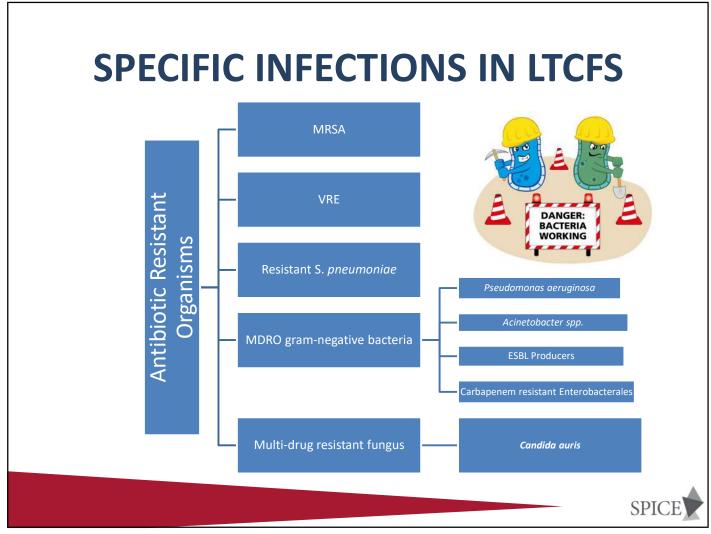

- Account for 26% of all serious adverse events
- 59% deemed preventable
- Among the most frequent causes of transfer to acute care hospitals and 30-day hospital readmissions.
- Cost of infection-related hospitalizations was estimated to be \$83 million in single month

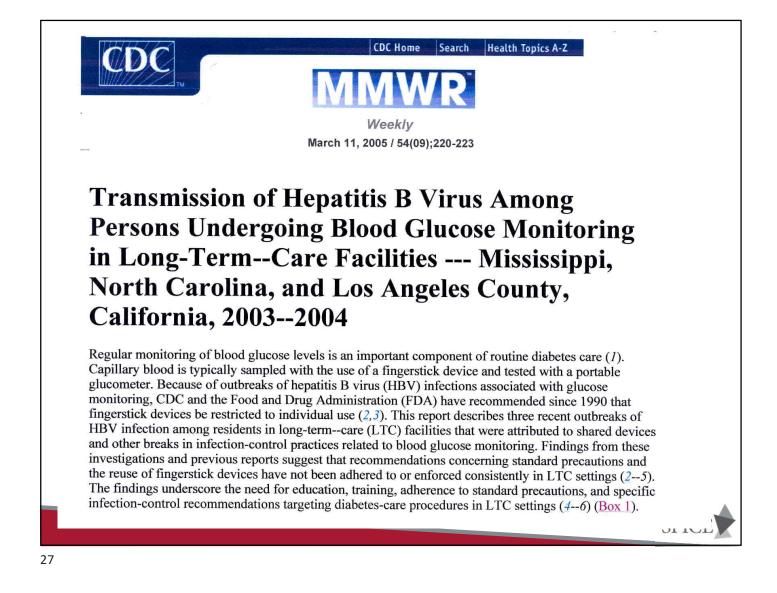

OIG. Adverse Events in Skilled Nursing Facilities: National Incidence Among Medicare Beneficiaries, OEI-06-11-00370

SPECIFIC INFECTIONS IN LTCFS

- Urinary Tract Infections
 - 30% of hospital readmissions in 30 days
- Respiratory Track Infections
 - Pneumonia 5th lead cause of death >65
- Skin and Soft Tissue
- Gastroenteritis
 - C difficile most common
- Conjunctivitis
- Bacteremia(s)
 - 50% related to UTI

RESIDENT FACTORS (NON-MODIFIABLE) CONTRIBUTING TO INFECTIONS

- Medications affecting resistance to infection
- Limited physiologic reserve
- Compromised host defenses (\$\sum cough reflex, thinning skin, decreased tear production and immune dysfunction)
- Coexisting chronic diseases
- Impaired responses to infection
- Increase frequency of therapeutic toxicity

SPIC

Health needs increase with age among nursing home residents

According to the CDC, top diagnoses among nursing home residents are:

Medical Diagnosis	Percentage of Nursing Home Residents	
Hypertension	71.5%	
Alzheimer's disease or other dementias	47.8%	
Depression	46.3%	
Heart Disease	38.1%	
Diabetes	32.0%	

MODIFIABLE FACTORS CONTRIBUTING TO INFECTION TRANSMISSION

- Lack of a staff member dedicated to the function of infection prevention and control
 - Staff education, monitoring and competency
- Semi-private rooms
- Inadequate ventilation systems and/or systems maintenance
- Residents sharing space, air, food in a crowded institutional setting
- Multiple visitors

SPIC

CATEGORIZATION OF RECOMMENDATIONS

- Category IA: Strongly recommended and strongly supported
- Category IB: Strongly recommended with some support
- Category IC: Required by law/regulation
- Category II: Recommended for implementation
- ➢ No Recommendation: Unresolved issues

INFECTION PREVENTION AND CONTROL PROGRAM (IPCP)

- §483.80 Infection Control
 - The facility must establish and maintain an infection prevention and control program designed to provide a safe, sanitary and comfortable environment and to help prevent the development and transmission of communicable disease and infection

INFECTION PREVENTION AND CONTROL PROGRAM (IPCP)

- Requires system for preventing, identifying, reporting, investigating and controlling infections and communicable diseases that:
 - <u>Covers all residents, staff (direct and indirect care), visitors, volunteers and</u> <u>other service providers. Expectation that facilities tailor the emphasis of</u> their IPCP for visitors and to work tor prevent transmission

For example, "screening may be passive using signs to alert family members and visitors with signs and symptoms of communicable diseases not to enter. More active screening may include the completion of a screening tool or questionnaire which elicits information related to recent exposures or current symptoms. That information is reviewed by the facility staff and the visitor is either permitted to visit or is excluded

- Is based on the individual facility assessment
- Follows accepted national standards

FACILITY-WIDE ASSESSMENT

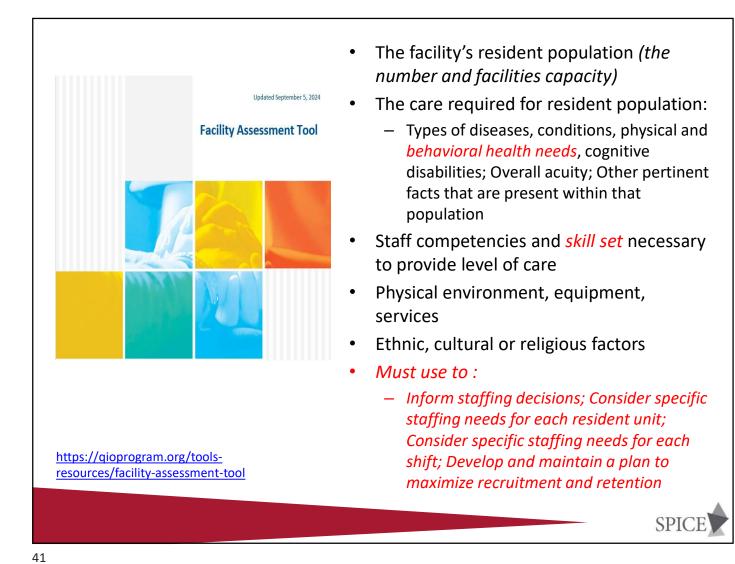

- "Determine what resources are necessary to care for its residents competently during both day-to-day operations (including nights and weekends) and emergencies"
- "The facility must review and update that
 - assessment:
 - As necessary
 - At least annually
 - Whenever there is, or facility plans for, any change that would require a substantial modification to any part of this assessment"
- Must include a facility-based and community-based risk assessment (MDROs, HAIs and communicable diseases)

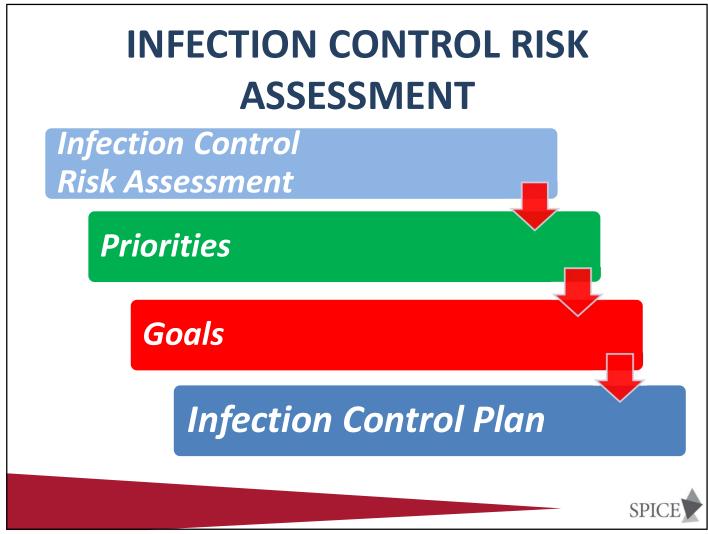

Source: Appendix PP State Operations manual_8/24

Strengthening the Facility Assessment

- Clarifying that facilities must use *evidence-based methods* when care planning for their residents, including consideration for those residents with behavioral health needs;
- Requiring that facilities use the facility assessment to assess the specific needs of each resident in the facility and to adjust as necessary based on any significant changes in the resident population;
- Requiring that facilities *include the input of facility staff*, including, but not limited to, nursing home leadership, management, direct care staff (i.e., nurse staff), representatives of direct care staff, and staff who provide other services; and,
- Requiring facilities to develop a staffing plan to maximize recruitment and retention of staff consistent with what was described in the <u>President's</u> <u>April Executive Order on Increasing Access to Higher Quality Care and</u> <u>Supporting Caregivers</u>.

EVENT Score	PROBABILITY OF OCCURRENCE (How likely is this to occur)1				RISK LEVEL OF FAILURE (What would be the most likely) ²				POTENTIAL CHANGE IN CARE (Will treatment/care be needed for resident/staff)*				PREPAREDNESS (Are processes in place and can they work) ⁴			YEAR: RISK LEVEL Add rankings
	High	Med	Low	None	Life Threatening	Permanent Harm	Temp Harm	None	High	Med	Low	None	Poor	Fair	Good	(score of 8 or >are considered highes priority for improvement effort

2 TYPES OF EVENTS/RISKS

Community/External

- TB risk (HCP & residents)
- COVID transmission in community
- Geographical area & environmental issues such as flooding, mudslides, hurricane, tornado, legionella, etc.
- Population served & socioeconomic status such as retirement community, rural, low income, drug abuse, etc.
- Regulatory DHSR OSHA

Facility specific/Internal

- Healthcare associated infections
- Antibiotic stewardship/ MDROs
- Exposure related events
- HCP compliance
- Resident/family
- New services/construction
- Procedures/devices

FOUR FACTORS TO CONSIDER: RANKING THE RISK

Probability of Occurrence (Likelihood)

- High: If there were more events than baseline numbers or more than experienced historically
- Medium: If there were a similar number of events experienced historically
- Low: If there were fewer events than expected or experienced historically
- None: No events occurred

Risk Level of Failure

- Life-Threatening: Event associated with high rates of mortality
- Permanent Harm: Event associated with loss of limb or permanent change in status
- Temporary Harm: Event associated with a temporary change in ambulation

Potential Change in Care

- High: Event resulted in transfer to higher level of care (hospital)
- Medium: Event resulted in major change to resident's care plan (acquisition of *C difficile* for example)
- Low: Event resulted in minor/short term modification to treatment (change in VS routine for example)
- None: No change in treatment or care plan

Preparedness

- Poor: No policies or procedures or process in place
- Fair: Policies/procedures in place but no monitoring to ensure compliance
- Good: Policies/procedures in place and compliance being monitored with staff feedback

INFECTION PREVENTION AND CONTROL PROGRAM (IPCP)

- Must include, at a minimum policies and procedures that address - §483.80(a)(2):
 - Surveillance (communicable diseases and infections)
 - Reporting
 - Standard and Transmission-based Precautions (define and explain application and how to utilize)
 - Emphasis that isolation should be the least restrictive
- Ensure staff are aware of policies
- Annual review of the IPCP and update as needed

Appendix PP State Operations manual 8/24

POLICIES INCLUDE-continued

- Hand hygiene
 - ABHR preferential use
- Selection and use of PPE
- Addressing use of facemasks for residents with new respiratory symptoms
- Addressing resident room assignment
- How to manage when on TBP and single room not available
- Limiting movement if on TBP

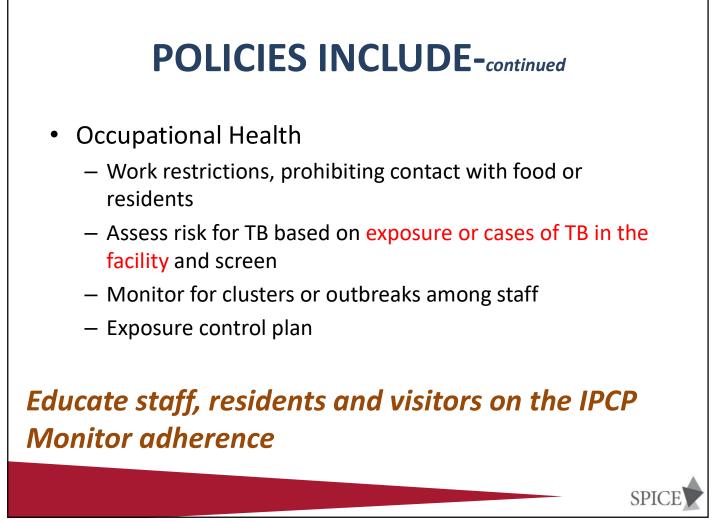

• Respiratory Hygiene/Cough Etiquette

- Increase prevalence of respiratory infections should have facemasks available and offer them to visitors and others entering the facility.
- Post signs with instructions on visitation restriction for those with symptoms

Environmental cleaning and disinfection

- Routine cleaning and disinfection/frequently touched surfaces
- Privacy curtains-changed when visibly dirty
- Shared equipment-routine cleaning and disinfection
- Objective methods for evaluation
 - Direct observation; Fluorescent markers; Adenosine triphosphate (ATP)

Appendix PP State Operations manual 10/22- 2/23, 8/24

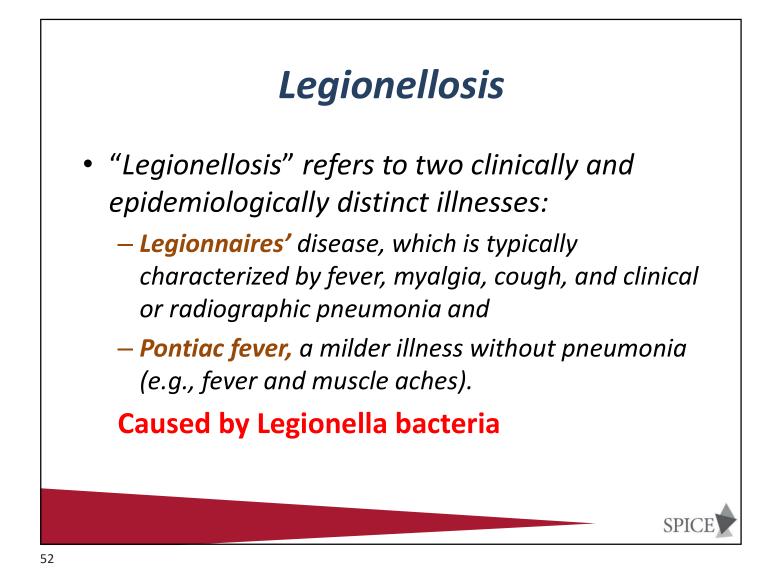

POLICIES INCLUDE-*continued*

- Linens
 - Use standard precautions if potentially contaminated (e.g., gloves, gowns when sorting and rinsing)
 - No special precautions (e.g., double bagging, melting bags) or categorizing (e.g., biohazard, color-coded) for linen originating in transmission-based precaution rooms is necessary

Appendix PP State Operations manual 10/22; 2/23; 8/24

Water Management

- Legionella can grow in parts of building water systems that are continually wet (e.g., pipes, faucets, water storage tanks, decorative fountains), and certain devices can spread contaminated water droplets via aerosolization (i.e., converted into a spray or mist in the air).
- Facilities must be able to demonstrate its measure to minimize the risk of Legionella and other opportunistic pathogens in building water systems such as by having a documented water management plan.
 - An assessment (identify where could grow and spread
 - Measures to prevent growth and how to monitor them
 - CMS does not require water cultures as part of routine program validation

INFECTION PREVENTION AND CONTROL PROGRAM (IPCP)F881

- An antibiotic stewardship program that includes antibiotic use protocols and a system to monitor use
- A system for recording incidents identified and the corrective actions taken

Antibiotic Stewardship Program

- Incorporate monitoring of antibiotic use, including the frequency of monitoring/review. Monitor/review response to antibiotics, and laboratory results when available, to determine if the antibiotic is still indicated or adjustments should be made (e.g., antibiotic time-out)
- Facilities should provide feedback (e.g., verbal, written note in record) to prescribing practitioners regarding antibiotic resistance data, their antibiotic use and their compliance with facility antibiotic use protocols to improve prescribing practices and resident outcomes.
- *Require antibiotic orders to include the indication, dose, and duration.*

ADMINISTRATIVE STRUCTURE (Committee)

- Oversight of the IP program should be defined and should include participation of the IP, administration, nursing staff, and physician staff (Category II)
 - Meet on regular basis
 - Written minutes with action plans and recommendations
 - Evaluate effectiveness
 - Review of IP data
 - Approve policies and procedures

INFECTION PREVENTIONIST-F882

- Collection and analysis of infection data
- Evaluation of products and procedures
- Development of policies
- Consultation
- Education

- Implementation of mandated changes
- Application of epidemiologic principles-outbreak management
- Antimicrobial management
- Research
- High quality services in a cost-efficient manner

483.80(b) Infection Preventionist

Issued 10-21-22; Effective 10-21-22; Implementation 10-24-22; Revised 2/23; 8/24

- The facility must designate <u>one or more</u> individuals as the infection preventionist (IP) who is responsible for assessing, developing, implementing, monitoring, and managing the IPCP.
- The IPCP includes content required in §§483.80(a)(1)-(4), <u>(F880, Infection</u> <u>Prevention and Control and at F881, Antibiotic Stewardship Program</u> (ASP)).
- While an <u>ASP is a team effort</u>, the IP is responsible for ensuring the program meets the requirements for ASPs (at §483.80(a)(3), F881).
- The IP should review and approve infection prevention and control training topics and content, as well as <u>ensure facility staff are trained</u> on the IPCP (for further information, see §483.95(e), F945, Infection Control Training).

 Does not have to perform the IPCP training, since some facilities may have designated staff development personnel

Qualified by education, training, experience or certification

SPICE

The IP should remain current with infection prevention and control issues and be aware of national organizations' guidelines as well as those from national/state/local public health authorities (e.g., emerging pathogens). The facility should ensure the individual selected as the IP has the background and ability to fully carry out the requirements of the IP based on the needs of the resident population, such as interpreting clinical and laboratory data.

- Reports-Track your progress, compare results of quizzes and pre- and post-tests

https://learnipc.apic.org/ltc-cip-certification/

Works at least part time in the facility

- Designated IP hours per week can vary based on the facility and its resident population. Therefore, the amount of time required to fulfill the role <u>must</u> <u>be at least part-time</u> and should be <u>determined by the facility assessment</u>, conducted according to §483.70(e), to determine the resources it needs for its IPCP, and ensure that those resources are provided for the IPCP to be effective.
- Based upon the assessment, facilities should determine if the individual functioning <u>as the IP should be dedicated solely to the IPCP</u>. A facility should consider resident census as well as resident characteristics, types of units such as respiratory care units, memory care, skilled nursing and the complexity of the healthcare services it offers as well as outbreaks and seasonality of infections such as influenza in determining the amount of IP hours needed.
- The IP <u>must have the time necessary</u> to properly assess, develop, implement, monitor, and manage the IPCP for the facility, address training requirements, and participate in required committees such as QAA.
- Must physically work onsite in the facility

Completed specialized training

 An IP must have obtained specialized IPC training beyond initial professional training or education prior to assuming the role. Training can occur through more than one course, but the IP must provide evidence of training through a certificate(s) of completion or equivalent documentation.

Infection prevention and control programoverview,The infection preventionist's role,Infection surveillance,Infection surveillance,Outbreaks,Principles of standard precautionsPrinciples of transmission-based precautions,Resident care activities (e.g., use and care ofindwelling urinary and central venouscatheters, wound management, and point-of-care blood testing),Water management,Linen management,

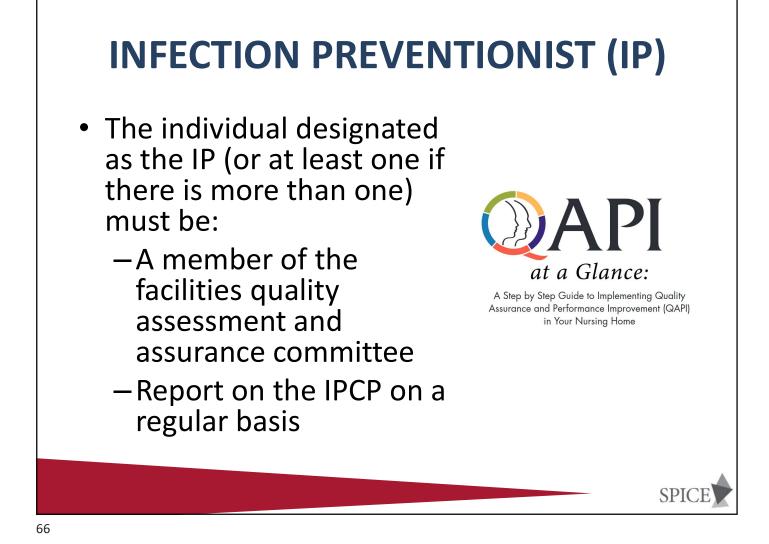

Preventing respiratory infections (e.g., influenza, pneumonia), Tuberculosis prevention, Occupational health considerations (e.g., employee vaccinations, exposure control plan, and work exclusions), Quality assurance and performance improvement, Antibiotic stewardship and Care Transitions

OIG: Certain For-Profit NH MAY NOT HAVE COMPLIED WITH FEDERAL REQUIREMENTS REGARDING THE INFECTION PREVENTIONIST POSITION (8/24)

- 76% (76/100) of the for-profit nursing homes complied with Federal requirements pertaining to IPs.
- 17% <u>potentially</u> did not comply with the requirement related to IP completing specialized IPC training *prior* to assuming the role and
- 7 <u>potentially</u> did not comply with the requirement to designate an IP

SPICE Mentorship Program In collaboration with the North Carolina Department of Health and Human Services (NC DHHS), the North Carolina Statewide ADVICE MOTIVATION Program for Infection Control and Epidemiology (SPICE) would like TRAINING to encourage your participation in SUCCESS MENTORING a free performance improvement project focusing on Infection Prevention and Control (IPC). GOAL DIRECTION Funded by CDC via contract with NCDHHS SUPPORT COACHING Onsite mentoring - Visits, standardized plan of activities and topics To request additional information or for questions please contact Marty Cooney at marty_cooney@med.unc.edu 65

INFECTION PREVENTIONIST (IP)

A Step by Step Guide to Implementing Quality Assurance and Performance Improvement (QAPI) in Your Nursing Home

- Reporting may include, but is not limited to, facility process and outcome surveillance, outbreaks (ongoing and any since the last meeting) and control measures, occupational health communicable disease illnesses (e.g., TB, influenza) and the Antibiotic Stewardship Program (ASP) related to antibiotic use and resistance data.
- In order to be considered an active participant,
 the IP should <u>attend each QAA meeting</u>. If the
 IP cannot attend, another staff member should
 report on the IP's behalf, but this does not
 change or absolve the IP's responsibility to
 fulfill the role of QAA committee member or
 reporting on the IPCP.

QUALITY ASSURANCE PERFORMANCE IMPROVEMENT

- Develop, implement and maintain an effective, comprehensive, data-driven QAPI program
 - Address all systems of care and management practices
 - Include clinical care, quality of life and resident choice
 - Define and measure indicators of quality and facility goals
 - Reflect the complexities, unique care and services the facility provides

"Quality Assurance and Performance Improvement (QAPI)" is the coordinated application of two mutually-reinforcing aspects of a quality management system: Quality Assurance (QA) and Performance Improvement (PI). QAPI takes a systematic, interdisciplinary, comprehensive, and data-driven approach to maintaining and improving safety and quality in nursing homes while involving residents and families in practical and creative problem solving.

MONITORING PERFORMANCE: AUDITS

- Quality audits are performed to verify conformance to standards through objective review.
- Should be an opportunity for improvement and not punitive
- Audits can assist the facility in:
 - Establishing a baseline of performance for each activity
 - Identifying what needs to be improved, and
 - -Targeting educational needs

Central Venous Catheter Use Vrinary Catheter Use

"It's not that I don't love you. It's just that a ten year-old needs his freedom."

- Timely
- Based on data that is valid
- Comparisons between peers may be helpful
- Sustained

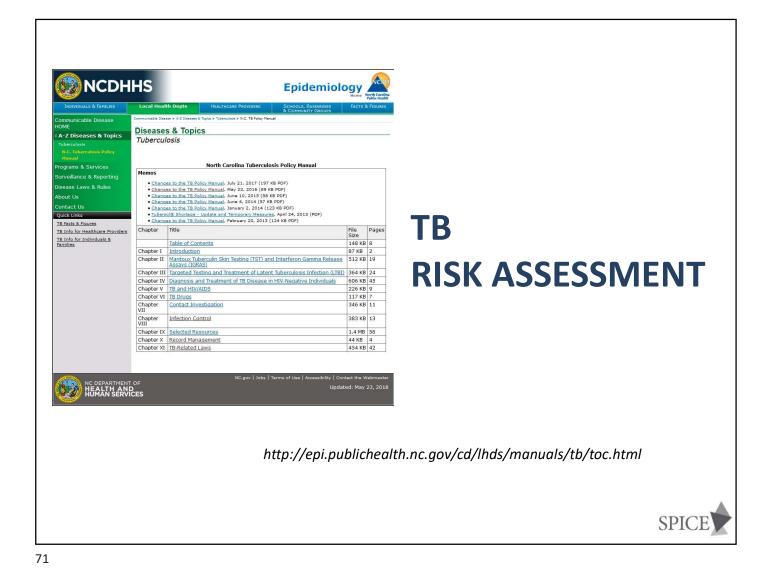

Feedback is one of many data sources which provide valuable information the facility <u>must incorporate into an effective</u> <u>QAPI program</u>. Each facility must establish and implement written policies and procedures for feedback.

Examples of mechanisms for obtaining resident and staff feedback may include, but are not limited to:

• Satisfaction surveys and questionnaires;

• Routine meetings, e.g., care plan meetings, resident council, safety team, town hall; and

• Suggestion or comment boxes

TB Screening, Testing and Treatment of U.S. Health Care Personnel (CDC Recommendations 2019)

- U.S. healthcare personnel should be screened for TB upon hire (i.e., preplacement)
- TB screening includes a process that includes:
 - A baseline individual TB risk assessment (2019 updated recommendations)
 - TB symptom evaluation
 - A TB test (e.g., TB blood test or a TB skin test) and
 - Additional evaluation for TB diseased as needed

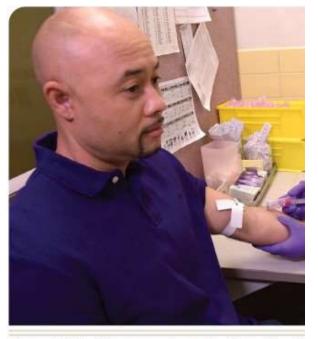

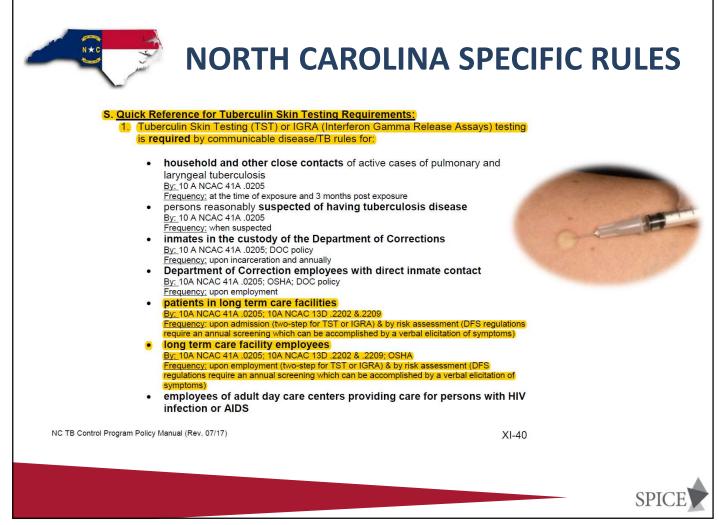

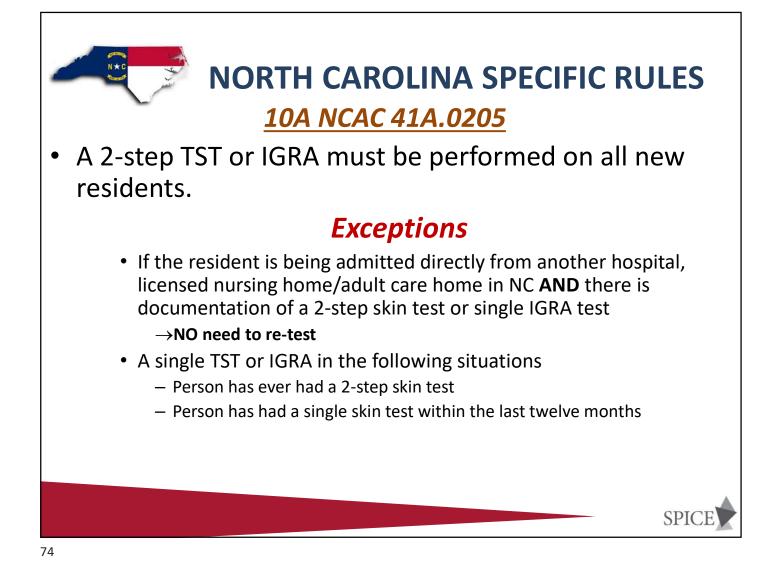

Figure 3.1 Health care worker collecting a blood

§483.80(d) INFLUENZA AND PNEUMOCOCCAL IMMUNIZATIONS

- Influenza: Facility must develop policies and procedures to ensure that:
 - Before offering, education provided
 - Offered when it becomes available each season is most effective versus date specific (October 1-March 31) <u>annually</u>
 - Right to refuse
 - Documentation
- Pneumococcal disease: Facility must develop policies and procedures to ensure that:
 - Before offering, education provided
 - Offered unless already immunized or medically contraindicated (CDC has lowered age to 50;10/24)
 - Right to refuse
 - Documentation

Self-reported doses of the vaccines included above are acceptable
